## Environmental Statement Supplement Volume 2: Appendices
March 2018

# Environmental Statement Supplement Volume 2: Appendices

The following revised appendices are included in this Volume. They are either included as a full appendix replacement, sections of updated text from individual appendices or as a new appendix as detailed below.

## Revised appendices accompanying Chapter 8: Air Quality are included as follows:

| | |
|---|---|
| Appendix 8A | Construction Phase Assessment (Complete replacement) |
| Appendix 8B | Baseline Monitoring (Complete replacement) |
| Appendix 8C | Air Dispersion Model Process (Complete replacement) |
| Appendix 8D | Air Quality Human Receptor Results (Complete replacement) |
| Appendix 8E | Designated Site Assessment (Complete replacement) |

## Revised appendices accompanying Chapter 9: Cultural Heritage are included as follows:

| | |
|---|---|
| Appendix 9B | Cultural Heritage Gazetteer (Sections of text replaced) |
| Appendix 9D | Assessment of the significance of the Impact of Development on the Historic Landscape (ASIDOHL) (Complete replacement) |

## Revised appendices accompanying Chapter 10: Landscape and Visual Impact are included as follows:

| | |
|---|---|
| Appendix 10E | Visual Effects Schedule: People in Residential Properties (Sections of text replaced) |
| Appendix 10F | Visual Effects Schedule: Users of Public Rights of Way and Open Access Land (Sections of text replaced) |
| Appendix 10H | Visual Effects Schedule: People at Work (Sections of text replaced) |
| Appendix 10I | Landscape Assessment (Sections of text replaced) |
| Appendix 10J | Night Skies Assessment (Sections of text replaced) |

## Revised appendices accompanying Chapter 11: Nature Conservation are included as follows:

| | |
|---|---|
| Appendix 11A | Site of Special Scientific Interest Legislative Compliance report (Sections of text replaced) |
| Appendix 11Q | Marsh fritillary habitat assessment – Lynwood, Croesbychan (New Appendix) |

## Revised appendices accompanying Chapter 14: Noise and Vibration are included as follows:

| | |
|---|---|
| Appendix 14B | Assessment Approach (Complete replacement) |
| Appendix 14C | Noise Monitoring Results (Sections of text replaced) |
| Appendix 14F | Predicted Operational Noise Levels at Receptors (Complete replacement) |

Page left intentionally blank.

# Appendix 8A – Construction Phase Assessment

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 8A – Construction Phase Assessment.**

## 8A.1 Introduction

This technical appendix supports Chapter 8 of the Environmental Statement (ES) and outlines criteria developed by the Institute of Air Quality Management (IAQM, 2016) for the assessment of air quality impacts arising from construction activities. The following sections outline the methodology and the construction dust assessment.

## 8A.2 Assessment Methodology

### 8A.2.1 Step 1: Identify the need for a detailed assessment

An assessment would normally be required where there is:

- a human receptor within 350 m of the proposed scheme and / or within 50 m of the access route(s) used by construction vehicles on the public highway, up to 500 m from the study area site entrance(s); and / or
- an ecological receptor within 50 m of the proposed scheme and / or within 50 m of the access route(s) used by construction vehicles on the public highway, up to 500 m from the site entrance(s).

A human receptor refers to any location where a person or property may experience the adverse effects of airborne dust or dust-soiling, or exposure to particulate matter ($PM_{10}$) over a period relevant to the air quality objectives. Although $PM_{2.5}$ is not specifically included as a parameter within the assessment, the risk levels associated with $PM_{10}$ and any subsequent mitigation measures would also apply to $PM_{2.5}$, as $PM_{2.5}$ is included within the $PM_{10}$ fraction.

An ecological receptor refers to any sensitive habitat affected by dust soiling. For locations with a statutory designation, such as a Site of Specific Scientific Interest (SSSI), Special Areas of Conservation (SACs) and Special Protection Areas (SPAs), consideration should be given as to whether the particular site is sensitive to dust. Some non-statutory sites may also be considered if appropriate, such as a Site of Importance for Nature Conservation (SINC).

Where the need for a more detailed assessment is screened out, it can be concluded that the level of risk is 'negligible' and any effects would be 'not significant'.

### 8A.2.2 Step 2: Assess the risk of dust impacts

A site is allocated to a risk category on the basis of the scale and nature of the works (Step 2A) and the sensitivity of the area to dust impacts (Step 2B). These two factors are combined in Step 2C to determine the risk of dust impacts before the implementation of mitigation measures. Risks are described in terms of there being a low, medium or high risk of dust impacts for each of the four separate potential activities (demolition, construction, earthworks and trackout). Site-specific mitigation would be required, proportionate to the level of risk.

#### 8A.2.2.1 Step 2A: Define the potential dust emission magnitude

The potential dust emission magnitude is based on the scale of the anticipated works and should be classified as small, medium or large. Table 8A.1 presents the dust emission criteria outlined for each construction activity.

**Table 8A.1 : Potential dust emission magnitude criteria**

| Construction activity | Large | Medium | Small |
|---|---|---|---|
| Demolition | Total building volume >50,000 $m^3$, potentially dusty construction material (such as concrete), on-site crushing and screening, demolition activities >20 m above ground level. | Total building volume 20,000 $m^3$ – 50,000 $m^3$, potentially dusty construction material, demolition activities 10-20 m above ground level. | Total building volume <20,000 $m^3$, construction material with low potential for dust release (such as metal cladding or timber), demolition activities <10 m above ground, demolition during wetter months. |
| Earthworks | Total site area >10,000 $m^2$, potentially dusty soil type (such as clay, which will be prone to suspension when dry due to small particle size), >10 heavy earth moving vehicles active at any one time, formation of bunds >8 m in height, total material moved >100,000 tonnes. | Total site area 2,500 $m^2$ – 10,000 $m^2$, moderately dusty soil type (such as silt), 5-10 heavy earth moving vehicles active at any one time, formation of bunds 4 m – 8 m in height, total material moved 20,000 tonnes – 100,000 tonnes. | Total site area <2,500 $m^2$, soil type with large grain size (such as sand), <5 heavy earth moving vehicles active at any one time, formation of bunds <4 m in height, total material moved <20,000 tonnes, earthworks during wetter month. |
| Construction | Total building volume >100,000 $m^3$, on site concrete batching, sandblasting. | Total building volume 25,000 $m^3$ – 100,000 $m^3$, potentially dusty construction material (such as concrete), on site concrete batching. | Total building volume <25,000 $m^3$, construction material with low potential for dust release (such as metal cladding or timber). |
| Trackout | >50 HDV (>3.5 t) outward movements[1] in any one day[2], potentially dusty surface material (such as high clay content), unpaved road length >100 m. | 10-50 HDV (>3.5 t) outward movements[1] in any one day[2], moderately dusty surface material (such as high clay content), unpaved road length 50 m – 100 m. | <10 HDV (3.5 t) outward movements[1] in any one day[2], surface material with low potential for dust release, unpaved road length <50 m. |

1 A vehicle movement is a one-way journey. i.e. from A to B, and excludes the return journey.
2 Heavy Duty Vehicle (HDV) movements during a construction project vary over its lifetime, and the number of movements is the maximum not the average.

### 8A.2.2.2 Step 2B Define the sensitivity of the area

The sensitivity of the area is described as low, medium and high taking into account of a number of factors:

- the specific sensitivities of receptors in the area;
- the proximity and number of those receptors;
- the local background $PM_{10}$ concentrations; and
- site-specific factors, such as whether there are natural shelters, such as trees, to reduce the risk of wind-blown dust.

Table 8A.2 presents indicative examples of classification groups for the varying sensitivities of people to dust soiling effects, to the health effects of $PM_{10}$; and the sensitivities of receptors to ecological effects. A judgement is made at the site-specific level where sensitivities may be higher or lower, for example a soft fruit business may be more sensitive to soiling than an alternative industry in the same location. Box 6, Box 7 and Box 8 within the IAQM guidance (IAQM, 2016) outlines more detailed guidance for defining sensitivity.

**Table 8A.2 : Indicative examples of the sensitivity of different types of receptors**

| Sensitivity of receptor | Sensitivities of people and ecological receptors | | |
|---|---|---|---|
| | Dust soiling effects [1] | Health effects of $PM_{10}$ [2] | Ecological effects [3] |
| High | Dwellings, museums and other culturally important collections, medium and long-term car parks and car showrooms. | Residential properties, hospitals, schools and residential care homes. | Locations with an international or national designation and the designated features may be affected by dust soiling (such as SAC / SPA / Ramsar).<br>Locations where there is a community of a particularly dust sensitive species such as vascular species included in the Red Data list for Great Britain. |
| Medium | Parks, places of work. | Office and shop workers not occupationally exposed to $PM_{10}$. | Locations where there is a particularly important plant species, where dust sensitivity is uncertain or unknown.<br>Locations with a national designation where the features may be affected by dust deposition (such as SSSIs). |
| Low | Playing fields, farmland, footpaths, short-term car parks and roads. | Public footpaths, playing fields, parks and shopping streets. | Locations with a local designation where the features may be affected by dust deposition (such as local nature reserves). |

1 People's expectations would vary depending on the existing dust deposition in the area.
2 This follows the Department for Environment, Food and Rural Affairs (DEFRA, 2016) guidance as set out in Local Air Quality Management Technical Guidance (LAQM.TG (16)). Notwithstanding the fact that the air quality objectives and limit values do not apply to people in the workplace, such people can be affected to exposure of $PM_{10}$. However, they are considered to be less sensitive than the general public as a whole because those most sensitive to the effects of air pollution, such as young children are not normally workers. For this reason, workers have been included in the medium sensitivity category.
3 Only if there are habitats that might be sensitive to dust. A Habitat Regulation Assessment of the site may be required as part of the planning process if the site lies close to an internationally designated site i.e. Special Conservation Areas (SACs), Special Protection Areas (SPAs) designated under the Habitats Directive (92/43/EEC) and RAMSAR sites.

The IAQM guidance advises consideration of the risk associated with the nearest receptors to each phase of work. The A465 construction will be split into the following phases and stages:

- Phase 1 Stage 1 – Offline widening from Hirwaun to Trewaun;
- Phase 1 Stage 2 – Hirwaun Junction, Trewaun and structures to Afon Cynon Bridge;
- Phase 1 Stage 3 – Nant Melyn Mainline Viaduct and Croesbychan Junction;
- Phase 1 Stage 4 – Vale of Neath Bridge and Court Farm Underpass;
- Phase 2 Stage 1 – Opening Main Cut at Baverstock Junction and new Swansea Road;
- Phase 2 Stage 2 – Taf Fawr Viaducts, Junctions and Approaches;
- Phase 2 Stage 3 – Online Widening to Nant Ffrwd and associated Crossing;
- Phase 2 Stage 4 – Baverstock Junction and Approaches;
- Phase 2 Stage 5 – Nant Hir Crossing and Nant Moel Reservoir;
- Phase 3 Stage 1 – Dowlais Junction;
- Phase 3 Stage 2 – Cefn Coed High Street Bridge to Taf Fechan;
- Phase 3 Stage 3 –Pant Road Bridge and Jones Street Bridge;
- Phase 3 Stage 4 – Taf Fechan to Pen-Y-Dre; and

- Phase 3 Stage 5 – Prince Charles Hospital Junction.

Where there are multiple receptors in a single location, a worst case representative receptor location is considered and the highest risk applicable is allocated.

The receptor sensitivity and distance are then used to determine the potential dust risk for each dust effect for each construction activity as shown in Table 8A.3, Table 8A.4 and Table 8A.5. It is noted that distances are to the dust source and so a different area may be affected by trackout than by on-site works.

For trackout, the distances should be measured from the side of the roads used by construction traffic

**Table 8A.3 : Sensitivity of the area to dust soiling effects on people and property[1,2]**

| Receptor sensitivity | Number of receptors | Distance from the source (m) | | | |
|---|---|---|---|---|---|
| | | <20 | <50 | <100 | <350 |
| High | >100 | High | High | Medium | Low |
| | 10-100 | High | Medium | Low | Low |
| | 1-10 | Medium | Low | Low | Low |
| Medium | >1 | Medium | Low | Low | Low |
| Low | >1 | Low | Low | Low | Low |

1 Estimate the total number of receptors within the stated distance. Only the highest level of area sensitivity from the table needs to be considered. For example, if there are 7 high sensitivity receptors <20 m of the source and 95 high sensitivity receptors between 20 and 50 m, then the total of number of receptors <50 m is 102. The sensitivity of the area in this case would be high.

2 For trackout, the distances should be measured from the side of the roads used by construction traffic. Without site specific mitigation, trackout may occur from roads up to 500 m from large sites, 200 m from medium sites and 50 m from small sites, as measured from the site exit. The impact declines with distance from the site, and it is only necessary to consider trackout impacts up to 50 m from the edge of the road.

**Table 8A.4 : Sensitivity of the area to human health impacts[1,2,3]**

| Receptor sensitivity | Annual mean $PM_{10}$ concentration | Number of receptors | Distance from the source (m) | | | | |
|---|---|---|---|---|---|---|---|
| | | | <20 | <50 | <100 | <200 | <350 |
| High | >32 µg/m$^3$ | >100 | High | High | High | Medium | Low |
| | | 10-100 | High | High | Medium | Low | Low |
| | | 1-10 | High | Medium | Low | Low | Low |
| | 28-32 µg/m$^3$ | >100 | High | High | Medium | Low | Low |
| | | 10-100 | High | Medium | Low | Low | Low |
| | | 1-10 | High | Medium | Low | Low | Low |
| | 24-28 µg/m$^3$ | >100 | High | Medium | Low | Low | Low |
| | | 10-100 | High | Medium | Low | Low | Low |
| | | 1-10 | Medium | Low | Low | Low | Low |
| | <24 µg/m$^3$ | >100 | Medium | Low | Low | Low | Low |
| | | 10-100 | Low | Low | Low | Low | Low |
| | | 1-10 | Low | Low | Low | Low | Low |
| Medium | >32 µg/m$^3$ | >10 | High | Medium | Low | Low | Low |
| | | 1-10 | Medium | Low | Low | Low | Low |

| Receptor sensitivity | Annual mean $PM_{10}$ concentration | Number of receptors | Distance from the source (m) | | | | |
|---|---|---|---|---|---|---|---|
| | | | <20 | <50 | <100 | <200 | <350 |
| | 28-32 µg/m$^3$ | >10 | Medium | Low | Low | Low | Low |
| | | 1-10 | Low | Low | Low | Low | Low |
| | 24-28 µg/m$^3$ | >10 | Low | Low | Low | Low | Low |
| | | 1-10 | Low | Low | Low | Low | Low |
| | <24 µg/m$^3$ | >10 | Low | Low | Low | Low | Low |
| | | 1-10 | Low | Low | Low | Low | Low |
| Low | - | ≥1 | Low | Low | Low | Low | Low |

1 Estimate the total within the stated distance (such as the total within 350 m and not the number between 200 and 350 m), noting that only the highest level of area sensitivity from the table needs to be considered. For example, if there are 7 high sensitivity receptors <20 m of the source and 95 high sensitivity receptors between 20 and 50 m, then the total of number of receptors <50 m is 102. If the annual mean $PM_{10}$ concentration is 29 µg/m$^3$, the sensitivity of the area would be high.

2 Most straightforwardly taken from the national background maps, but should also take account of local sources. The values are based on 32 µg/m$^3$ being the annual mean concentration at which an exceedance of the 24-hour objective is likely in Wales.

3 In the case of high sensitivity receptors with high occupancy (such as schools or hospitals) approximate the number of people likely to be present. In the case of residential dwellings, just include the number of properties.

**Table 8A.5 : Sensitivity of the area to ecological impacts[1]**

| Receptor sensitivity | Distance from the source (m) [2] | |
|---|---|---|
| | <20 | <50 |
| High | High | Medium |
| Medium | Medium | Low |
| Low | Low | Low |

1 Only the highest level of area sensitivity from the table needs to be considered

2 For trackout, the distances should be measured from the side of the roads used by construction traffic. Without site specific mitigation, trackout may occur from roads up to 500m from large sites, 200m from medium sites and 50m from small sites, as measured from the site exit. The impact declines with distance from the site.

### 8A.2.2.3 Step 2C Define the risk of impacts

The dust emission magnitude is then combined with the sensitivity of the area to determine the overall risk of impacts with no mitigation measures applied. The matrices in Table 8A.6 provide a method of assigning the level of risk for each activity. These can then be used to determine the level of mitigation that is required.

**Table 8A.6 : Risks of dust impacts**

| Receptor sensitivity | Dust emission magnitude | | |
|---|---|---|---|
| | Large | Medium | Small |
| **Demolition** | | | |
| High | High risk | Medium risk | Medium risk |
| Medium | High risk | Medium risk | Low risk |
| Low | Medium risk | Low risk | Negligible risk |
| **Earthworks** | | | |
| High | High risk | Medium risk | Low risk |
| Medium | Medium risk | Medium risk | Low risk |
| Low | Low risk | Low risk | Negligible risk |
| **Construction** | | | |
| High | High risk | Medium risk | Low risk |
| Medium | Medium risk | Medium risk | Low risk |
| Low | Low risk | Low risk | Negligible risk |
| **Trackout** | | | |
| High | High risk | Medium risk | Low risk |
| Medium | Medium risk | Low risk | Negligible risk |
| Low | Low risk | Low risk | Negligible risk |

#### 8A.2.2.4 Step 3 Site specific mitigation

Step three of the IAQM guidance identifies appropriate site-specific mitigation. These measures are related to whether the site is a low, medium or high risk site. The highest risk category of a site (of all activities being undertaken) is recommended when considering appropriate mitigation measures for the site. Where risk is assigned as 'negligible', no mitigation measures beyond those required by legislation are required. However, additional mitigation measures may be applied as good practice.

A selection of these measures have been specified for Low risk to High risk sites in the IAQM guidance (IAQM, 2016) as measures suitable to mitigate dust emissions from activities.

#### 8A.2.2.5 Step 4 Determine significant effects

Following Step 2 (definition of the proposed scheme and the surroundings and identification of the risk of dust effects occurring for each activity), and Step 3 (identification of appropriate site-specific mitigation), the significance of the potential dust effects can be determined. The recommended mitigation measures should normally be sufficient to reduce construction dust impacts to a not significant effect.

The approach in Step 4 of IAQM dust assessment guidance has been adopted to determine the significance of effects with regard to dust emissions. The guidance states the following:

*"For almost all construction activity, the aim should be to prevent significant effects on receptors through the use of effective mitigation. Experience shows that this is normally possible. Hence the residual effect will normally be 'not significant."*

IAQM guidance also states that:

*"Even with a rigorous DMP [Dust Management Plan] in place, it is not possible to guarantee that the dust mitigation measures will be effective all the time, and if, for example, dust emissions occur under adverse weather conditions, or there is an interruption to the water supply used for dust suppression, the local community may experience occasional, short-term dust annoyance. The likely scale of this would not normally be considered sufficient to change the conclusion that with mitigation the effects will be 'not significant'."*

Step 4 of IAQM guidance recognises that the key to the above approach is that it assumes that the regulators ensure that the proposed mitigation measures are implemented. The management plan should include the necessary systems and procedures to facilitate on-going checking by the regulators to ensure that mitigation is being delivered, and that it is effective in reducing any residual effect to 'not significant' in line with the guidance.

## 8A.3 Construction Dust Assessment

### 8A.3.1 Step 1 Identify the need for a detailed assessment

An assessment of potential demolition and construction impacts was undertaken in accordance with the IAQM methodology described earlier and as set out in section 3. The first step is Step 1, where the need for a detailed assessment is determined based on the location of receptors within the vicinity of the study area.

#### 8A.3.1.1 Human receptors

Human receptors include locations where people spend time and where property may be impacted by dust. They may have a High, Medium or Low sensitivity to dust soiling and human health effects in accordance with IAQM guidance. There are human receptors within 350 m of the study area; therefore, further assessment is required. A count of the 'High' sensitive relevant human receptors within the specified assessment bands for each stage of the proposed scheme was carried out as recommended in IAQM guidance (IAQM, 2016), the results of which are set out in Table 8A.7. The receptors have been identified for each of the different phases in line with Step 2B. Medium and Low sensitivity receptors were also identified (e.g. The Beacons Park natural burial ground at Upper High Street, Merthyr Tydfil).

IAQM guidance (IAQM, 2016) recommends a trackout count (i.e. those receptors within 50 m of the route(s) used by construction vehicles on the public highway, up to 500 m from the site entrance(s)) be undertaken. Site access / egress points and haul routes are still to be finalised. However, based on available drawings at the time of writing, an estimated count of sensitive receptors (e.g. residential properties or commercial premises, etc.) up to 500 m from the likely site entrance(s) has been undertaken. These receptors are set out in Table 8A.7.

**Table 8A.7 : Dust soiling and human health receptor count**

| Construction activity and distance | | Receptor count for Stage 1 | | |
|---|---|---|---|---|
| | | Phase 1 | Phase 2 | Phase 3 |
| **Demolition, earthworks and construction** | | | | |
| Distance to construction boundary | < 20 m | 2 | 3 | 36 |
| | < 50 m | 7 | 11 | 144 |
| | < 100 m | 38 | 85 | 287 |
| | < 350 m | 542 | 315 | 1,038 |
| **Trackout** | | **Phase 1** | **Phase 2** | **Phase 3** |
| Distance from roads up to 500 m from the site entrance | < 20 m | >10 | <10 | <10 |
| | 20 m – 50 m | 10 - 100 | 10 - 100 | 10 - 100 |

| Construction activity and distance | | Receptor count for Stage 2 | | |
|---|---|---|---|---|
| | | Phase 1 | Phase 2 | Phase 3 |
| **Demolition, earthworks and construction** | | | | |
| Distance to construction boundary | < 20 m | 42 | 14 | 21 |
| | < 50 m | 102 | 46 | 111 |
| | < 100 m | 257 | 128 | 280 |
| | < 350 m | 1,344 | 649 | 1,264 |
| **Trackout** | | **Phase 1** | **Phase 2** | **Phase 3** |
| Distance from roads up to 500 m from the site entrance | < 20 m | >10 | <10 | >10 |
| | 20 m – 50 m | 10 - 100 | 10 - 100 | 10 - 100 |
| **Construction activity and distance** | | **Receptor count for Stage 3** | | |
| | | **Phase 1** | **Phase 2** | **Phase 3** |
| **Demolition, earthworks and construction** | | | | |
| Distance to construction boundary | < 20 m | 0 | 1 | 15 |
| | < 50 m | 0 | 8 | 66 |
| | < 100 m | 0 | 54 | 156 |
| | < 350 m | 1 | 373 | 732 |
| **Trackout** | | **Phase 1** | **Phase 2** | **Phase 3** |
| Distance from roads up to 500 m from the site entrance | < 20 m | >10 | 0 | >10 |
| | 20 m – 50 m | 10 - 100 | <10 | 10 - 100 |
| **Construction activity and distance** | | **Receptor count for Stage 4** | | |
| | | **Phase 1** | **Phase 2** | **Phase 3** |
| **Demolition, earthworks and construction** | | | | |
| Distance to construction boundary | < 20 m | 17 | 0 | 34 |
| | < 50 m | 52 | 1 | 123 |
| | < 100 m | 89 | 63 | 319 |
| | < 350 m | 481 | 274 | 1,555 |
| **Trackout** | | **Phase 1** | **Phase 2** | **Phase 3** |
| Distance from roads up to 500 m from the site entrance | < 20 m | <10 | 0 | <10 |
| | 20 m – 50 m | 10 - 100 | <10 | 10 - 100 |
| **Construction activity and distance** | | **Receptor count for Stage 5** | | |
| | | **Phase 1** | **Phase 2** | **Phase 3** |
| **Demolition, earthworks and construction** | | | | |

| | | | | |
|---|---|---|---|---|
| Distance to construction boundary | < 20 m | N/A | 0 | 0 |
| | < 50 m | | 0 | 9 |
| | < 100 m | | 0 | 53 |
| | < 350 m | | 2 | 716 |
| **Trackout** | | **Phase 1** | **Phase 2** | **Phase 3** |
| Distance from roads up to 500 m from the site entrance | < 20 m | N/A | 0 | >10 |
| | 20 m – 50 m | | 0 | 10 - 100 |

#### 8A.3.1.2 Ecological receptors

The effect of construction dust on ecological sites has also been considered. The ecological receptors considered in this assessment are presented in Table 8A.8. The vegetation type present at each site was obtained from the UK Air Pollution Information System (APIS) website which is published by the Centre for Ecology and Hydrology. Where this information was not available, advice was sought from Jacobs ecologists. The ecological receptors were then categorised into a dust deposition sensitivity class of Low, Medium or High taking into account the likely effect and the value of the sites ecological assets as recommended in the IAQM construction dust guidance (IAQM, 2016) and the likely sensitivity to dust soiling and smothering of the vegetation within each site. It should be noted some of these sites traverse more than one stage of the proposed scheme.

**Table 8A.8 : Ecological receptor identification and sensitivity**

| Ecological receptor | Sensitivity to dust deposition | Reason for sensitive classification |
|---|---|---|
| Ancient Semi Natural Woodland (12372) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (13684) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (13688) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (13689) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (18501) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (18509) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (18514) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (7347) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (7392) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (8800) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (8801) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Ancient Semi Natural Woodland (8804) | Low | Primary vegetation type is broadleaved, mixed and yew |

| Ecological receptor | Sensitivity to dust deposition | Reason for sensitive classification |
|---|---|---|
| Cwm Taf Fechan Woodlands SSSI | Medium | Primary vegetation is broadleaved, mixed and yew. Medium sensitivity assigned as per IAQM guidance (IAQM, 2016) |
| Cwm Taf Fechan Woodlands LNR | Low | Primary vegetation type is broadleaved, mixed and yew |
| Habitats supporting the Marsh Fritillary | High | Blaen Cynon SAC to the north of the proposed scheme (areas within designated SAC boundary not considered in this assessment) is designated for this mobile species and as such, those areas of marshy grassland or rhos pastures and purple moor grass likely to support Marsh Fritillary have been assigned the same sensitivity as an SAC (i.e. High) as per IAQM guidance (IAQM, 2016). |
| Plantation on Ancient Woodland Site (39415) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Plantation on Ancient Woodland Site (39606) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Restored Ancient Woodland Site (11374) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Restored Ancient Woodland Site (11376) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Restored Ancient Woodland Site (21421) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Restored Ancient Woodland Site (21422) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Restored Ancient Woodland Site (21423) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Pan March and Traed y Milwyr, Llechryd (SINC 001) | Low | Primary vegetation type is acid grassland |
| Y Graig (SINC 64) | Low | Primary vegetation type is acid grassland |
| Winchfawr West (SINC 72) | Low | Primary vegetation type is fen, marsh and swamp |
| Coed Meirig Pastures (SINC 74) | Low | Primary vegetation type is acid grassland |
| Cwm Taf Fawr (SINC 79) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Bryniau (SINC 89) | Low | Primary vegetation type is acid grassland |
| Cwm Ffrwd (SINC 151) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Proposal - Hirwaun Industrial Estate (SINC 214) | Low | Primary vegetation type is fen, marsh and swamp |
| Proposal - Hirwaun Ponds (SINC 216) | Low | Primary vegetation type is fen, marsh and swamp |
| Proposal - Hirwaun Common (SINC 217) | Low | Primary vegetation type is acid grassland |
| Proposal - Hirwaun Ponds North (SINC 219) | Low | Primary vegetation type is fen, marsh and swamp |

| Ecological receptor | Sensitivity to dust deposition | Reason for sensitive classification |
|---|---|---|
| Proposal - Hirwaun Iron works (SINC 220) | Low | Primary vegetation type is neutral grassland also broadleaved, mixed and yew woodland |
| Proposal - Upper Cynon Floodplain (SINC 222) | Low | Primary vegetation type is fen, marsh and swamp also broadleaved, mixed and yew woodland |
| Proposal - Nant Hir Valley & Reservoir (SINC 223) | Low | Primary vegetation type is broadleaved, mixed and yew woodland |
| Proposal - Llwydcoed slopes (SINC 225) | Low | Primary vegetation type is fen, marsh and swamp |
| Proposal - Bryn-defaid Heath (SINC 226) | Low | Primary vegetation type is dwarf shrub heath |
| Proposal - Aberdare mountain (SINC 236) | Low | Primary vegetation type is acid grassland |
| Cwm Taf Fechan (SINC 241) | Low | Primary vegetation type is broadleaved, mixed and yew |
| Tir Mawr a Dderi Hir, Llwydcoed SSSI | Medium | Primary vegetation type is Acid Grassland. Medium sensitivity assigned for a SSSI as per IAQM guidance (IAQM, 2016) |

### 8A.3.2 Step 2 Assess the risk of dust impacts

#### 8A.3.2.1 Step 2A Define the potential dust emission magnitude

The activities associated with the construction of the proposed scheme would be split into three stages, which could potentially involve different periods of demolition, earthworks, construction and trackout, and activity levels of which would not necessarily peak simultaneously. This assessment was undertaken on the basis that all activities associated with construction of the A465 Sections 5 and 6 occur simultaneously, which represents a conservative assumption.

### 8A.3.2.2 Dust emission magnitude summary

The dust emission magnitudes of each activity for each phase is summarised in Table 8A.9.

**Table 8A.9 : Dust emission magnitude**

| Construction programme | Demolition | Earthworks | | | Construction[4] | | Trackout[5] | |
|---|---|---|---|---|---|---|---|---|
| | Dust emission magnitude[3] | HDV active at any one time | Total earthworks (T) | Dust emission magnitude | Construction volume ($m^3$) | Dust emission magnitude | Max HDV movements in any one day | Dust emission magnitude |
| Phase 1 between Hirwaun Ponds and Nant Melyn Mainline Viaduct. | | | | | | | | |
| Phase 1 Stage 1 | Large | 11 | 828,353 | Large | 21,855 | Small | 90 | Large |
| Phase 1 Stage 2 | Large | 10 | 311,711 | Large | 46,333 | Medium | 66 | Large |
| Phase 1 Stage 3 | Large | 11 | 806,762 | Large | 26,226 | Medium | 134 | Large |
| Phase 1 Stage 4 | Large | 5 | 104,631 | Large | 10,490 | Small | 24 | Medium |
| Phase 2 between Nant Melyn Mainline Viaduct to A470 Junction. | | | | | | | | |
| Phase 2 Stage 1 | Large | 13 | 1,831,178 | Large | N/A[2] | Medium[2] | 127 | Large |
| Phase 2 Stage 2 | Medium | 11 | 748,369 | Large | 10,490 | Small | 66 | Large |
| Phase 2 Stage 3 | Medium | 6 | 309,455 | Large | 13,113 | Small | 57 | Large |
| Phase 2 Stage 4 | Large | 4 | N/A[1] | Large[1] | 42,836 | Medium | 16 | Medium |
| Phase 2 Stage 5 | Large | 6 | 71,479 | Medium | 20,981 | Small | 75 | Large |
| Phase 3 between the A470 junction and Dowlais Junction. | | | | | | | | |
| Phase 3 Stage 1 | Medium | 6 | 429,362 | Large | 26,226 | Medium | 109 | Large |
| Phase 3 Stage 2 | Large | 6 | 329,110 | Large | 19,232 | Small | 25 | Medium |
| Phase 3 Stage 3 | Large | 4 | 39,545 | Medium | 7,868 | Small | 25 | Medium |
| Phase 3 Stage 4 | Large | 9 | 275,403 | Large | 21,855 | Small | 44 | Medium |
| Phase 3 Stage 5 | Large | 9 | 539,699 | Large | 41,962 | Medium | 74 | Large |

1 Not applicable as Earthwork activities are included within Phase 2 Stage 1, therefore same dust magnitude has been assumed.

2 Not applicable as Earthwork activities included within Phase 2 Stage 4, therefore same dust magnitude has been assumed.
3 Demolition assumed to be Large unless limited removal of existing carriageway anticipated
4 Potentially dusty construction material anticipated
5 Unpaved road length unknown

### 8A.3.3 Step 2B Define the sensitivity of the area

The proposed scheme bypasses the communities of Hirwaun, Cefn Coed, Gurnos, Penybryn, Dowlais and Pant which includes a number of residential / commercial properties and a number of schools including Hirwaun Primary School, Ysgol-y-Graig Primary School and Pen-y-Dre High School.

The Beacons Park natural burial ground at upper High Street, Merthyr Tydfil is adjacent to the proposed scheme (Phase 3) and would be considered a medium sensitivity receptor in accordance with IAQM guidance. This site was included in the sensitivity assessment.

Table 8A.10 displays the sensitivities of the surrounding area to demolition, earthworks, construction and trackout based on the criteria set out in Table 8A.3 and Table 8A.4. As discussed previously, the proposed construction routes and site entrance(s) are still being considered. In the absence of this information, the sensitivity of the surrounding area to trackout activities for human receptors has been determined using professional judgement (in line with IAQM guidance). The ecological receptors presented in Table 8A.10 represent the most sensitive ecological receptor considered within each stage.

It should be noted the IAQM guidance recommends that the receptor distance is based on the distance from the source rather than the site boundary. This assessment was undertaken on the basis that all activities (i.e. demolition, earthworks, construction and trackout) take place at the respective construction boundary for each stage. This represents a conservative assumption, as in practice most activities would not take place at the site boundary, thus increasing the distance between the source and the receptor.

**Table 8A.10 : Sensitivity of the proposed scheme area**

| Potential impact | Sensitivity of the surrounding area | | | |
|---|---|---|---|---|
| | Demolition | Earthworks | Construction | Trackout |
| Phase 1 between Hirwaun Ponds and Nant Melyn Mainline Viaduct | | | | |
| Phase 1 Stage 1 Offline widening from Hirwaun to Trewaun | | | | |
| Dust Soiling | Medium | Medium | Medium | High |
| Human Health[1] | Low | Low | Low | Low |
| Ecological (marsh fritillary habitat[2]) | High | High | High | High |
| Phase 1 Stage 2 Hirwaun Junction, Trewaun and structures to Afon Cynon Bridge | | | | |
| Dust Soiling | High | High | High | High |
| Human Health[1] | Low | Low | Low | Low |
| Ecological (marsh fritillary habitat[2]) | High | High | High | High |
| Phase 1 Stage 3 Nant Melyn Mainline Viaduct and Croesbychan Junction. | | | | |
| Dust Soiling | Medium | Medium | Medium | High |
| Human Health[1] | Low | Low | Low | Low |

| Phase 3 Stage 4 Taf Fechan to Pen-Y-Dre | | | | |
| Dust Soiling | High | High | High | Medium |
| Human Health[1] | Low | Low | Low | Low |
| Ecological (SINC 241 – Cwm Taf Fechan for trackout activities and Cwm Taf Fechan Woodlands SSSI for remaining activities) | Medium | Medium | Medium | Low |
| Phase 3 Stage 5 Prince Charles Hospital Junction | | | | |
| Dust Soiling | Low | Low | Low | High |
| Human Health[1] | Low | Low | Low | Low |
| Ecological (SINC 89 Bryniau) | Low | Low | Low | Low |

1 A $PM_{10}$ background concentration of 16.6µg/$m^3$ (corresponding to the maximum concentration across the study area) was used in determining the sensitivity of the surrounding area. The data was obtained from the background pollutant concentration maps provided by DEFRA via the UK Air Information Resource [Online]. [Accessed: 3 August 2017]. Available from: http://uk-air.defra.gov.uk/.

2 Blaen Cynon SAC to the north of the proposed scheme (not considered in this assessment) is designated for the Marsh Fritillary butterfly. As a mobile species, those areas of marshy grassland or rhos pastures and purple moor grass likely to support Marsh Fritillary have been assigned the same sensitivity as an SAC (i.e. High) as per IAQM guidance (IAQM, 2016).

3 No ecological receptors considered.

### 8A.3.4 Step 2C Define the risk of impacts

#### 8A.3.4.1 Human receptors

Using the dust emission magnitudes for the various activities in Table 8A.9 and the sensitivity of the area provided in Table 8A.10, the definition of the risks for each activity are provided in Table 8A.11 for dust soiling, human health impacts and impacts on ecological sites.

**Table 8A.11 : Dust risk at human ecological receptors**

| Potential impact | Risk | | | |
|---|---|---|---|---|
| | Demolition | Earthworks | Construction | Trackout |
| Phase 1 between Hirwaun Ponds and Nant Melyn Mainline Viaduct Junction. | | | | |
| Phase 1 Stage 1 Offline widening from Hirwaun to Trewaun | | | | |
| Dust Soiling | High Risk[1] | Medium Risk | Low Risk[1] | High Risk[1] |
| Human Health | Medium Risk | Low Risk | Negligible Risk | Low Risk |
| Ecological (marsh fritillary habitat) | High Risk[1] | High Risk[1] | Low Risk[1] | High Risk[1] |
| Phase 1 Stage 2 Hirwaun Junction, Trewaun and structures to Afon Cynon Bridge | | | | |
| Dust Soiling | High Risk[1] | HighRisk[1] | Medium Risk[1] | High Risk[1] |
| Human Health | Medium Risk | Low Risk | Low Risk | Low Risk |
| Ecological (marsh fritillary habitat) | High Risk[1] | High Risk[1] | Medium Risk[1] | High Risk[1] |
| Phase 1 Stage 3 Nant Melyn Mainline Viaduct and Croesbychan Junction. | | | | |
| Dust Soiling | High Risk[1] | Medium Risk | Medium Risk[1] | High Risk[1] |
| Human Health | Medium Risk | Low Risk | Low Risk | Low Risk |
| Ecological (marsh fritillary habitat) | High Risk[1] | High Risk[1] | Medium Risk[1] | High Risk[1] |
| Phase 1 Stage 4 Vale of Neath Railway and Court Farm Underpass. | | | | |
| Dust Soiling | High Risk[1] | High Risk[1] | Low Risk[1] | Low Risk |
| Human Health | Medium Risk | Low Risk | Negligible Risk | Low Risk |
| Ecological (marsh Fritillary habitat) | High Risk[1] | High Risk[1] | Low Risk[1] | Medium Risk[1] |
| Phase 2 between Nant Melyn Mainline Viaduct and the A470 junction. | | | | |
| Phase 2 Stage 1 Opening Main Cut at Baverstock Junction and new Swansea Road. | | | | |
| Dust Soiling | High Risk[1] | Medium Risk | Medium Risk[1] | Medium Risk |
| Human Health | Medium Risk | Low Risk | Low Risk | Low Risk |
| Ecological (marsh fritillary habitat) | High Risk[1] | High Risk[1] | Medium Risk[1] | High Risk[1] |
| Phase 2 Stage 2 Taf Fawr Viaducts, Junctions and Approaches. | | | | |
| Dust Soiling | Medium Risk[1] | High Risk[1] | Low Risk[1] | Medium Risk |

| Potential impact | Risk | | | |
|---|---|---|---|---|
| | Demolition | Earthworks | Construction | Trackout |
| Human Health | Low Risk | Low Risk | Negligible Risk | Low Risk |
| Ecological (marsh fritillary for trackout activities and SINC 79 - Cwm Taf Fawr for remaining activities) | Low Risk | Low Risk | Negligible Risk | High Risk[1] |
| Phase 2 Stage 3 Online Widening to Nant Ffrwd and associated Crossing. | | | | |
| Dust Soiling | Medium Risk[1] | Medium Risk | Low Risk[1] | Low Risk |
| Human Health | Low Risk | Low Risk | Negligible Risk | Low Risk |
| Ecological (marsh fritillary habitat) | Medium Risk[1] | High Risk[1] | Low Risk[1] | High Risk[1] |
| Phase 2 Stage 4 Baverstock Junction and Approaches. | | | | |
| Dust Soiling | Medium Risk | Low Risk | Low Risk | Low Risk |
| Human Health | Medium Risk | Low Risk | Low Risk | Low Risk |
| Ecological (marsh fritillary habitat) | High Risk[1] | Medium Risk[1] | Medium Risk[1] | Medium Risk[1] |

| Human Health | Medium Risk | Low Risk | Negligible Risk | Low Risk[1] |
| Ecological (SINC 241 – Cwm Taf Fechan for trackout activities and Cwm Taf Fechan Woodlands SSSI for remaining activities) | High Risk[1] | Medium Risk | Low Risk[1] | Low Risk[1] |
| Phase 3 Stage 5 Prince Charles Hospital Junction. | | | | |
| Dust Soiling | Medium Risk[1] | Low Risk[1] | Low Risk[1] | High Risk[1] |
| Human Health | Medium Risk[1] | Low Risk[1] | Low Risk[1] | Low Risk |
| Ecological (SINC 89 - Bryniau) | Medium Risk[1] | Low Risk[1] | Low Risk[1] | Low Risk |

1 Denotes highest risk.
2 No ecological receptors considered

For the construction phase associated with Phase 1, Phase 2 and Phase 3 the results in Table 8A.11 indicate that the highest level of dust risk are a High risk for demolition, earthworks and trackout and Medium risk for construction activities. However, for some of the stages within each phase the dust risks are lower.

### 8A.3.5 Step 3 Site-specific mitigation

#### 8A.3.5.1 Recommended mitigation measures

The results in Table 8A.11 indicate that risk levels associated with the construction of the proposed scheme range from Low risk to High risk at some stages for human and ecological receptors. Mitigation measures would be needed to reduce the potential for significant effects of dust emissions in the vicinity of the proposed scheme. The suggested mitigation measures, based on the risk level identified for each stage, which should be adopted for the proposed scheme, are set out below.

The mitigation measures have been derived from those specified in the IAQM guidance (IAQM, 2016) and are suitable to mitigate dust emissions generated by the proposed scheme. Measures such as those specified in the guidance would normally be sufficient to reduce construction dust nuisance, risk to human health or effects on ecological sites to a 'not significant' effect. These measures are listed in Table 8A.12 to Table 8A.17 with a recommendation as to whether or not they should be applied based on the highest risk level identified in the dust assessment for each stage. Some specific comments or observations have been added where appropriate. Some of the mitigation measures listed within the IAQM guidance for trackout (mitigation numbers 44, 46, 47 and 48) were considered to represent general on-site activities and operation of haul roads and were moved to the 'Operations' section of the general mitigation measures required for all sites (see Table 8A.13). The general

mitigation measures were specified based on the highest risk category (for either human or ecological receptors) for each stage of the proposed scheme as recommended by the IAQM guidance (IAQM, 2016).

As discussed previously, the measures to control dust emissions and monitor the effectiveness of the mitigation would be agreed formally with the respective local authority and potentially key stakeholders (such as Natural Resource Wales (NRW)) as part of a dust management plan (DMP) which would form part of the construction environmental management plan (CEMP). It is anticipated that this would be achieved through the setting of an appropriate condition or requirement through the environmental impact assessment (EIA) process.

When applying the mitigation measures, IAQM guidance (IAQM, 2016) states the following:

*"The most important aspects of the Dust Management Plan are assigning responsibility for dust management to an individual member of staff of the principal contractor, training staff to understand the importance of the issue, and communicating with the local community. Good dust management practices implemented at high risk sites have resulted in no or minimal complaints, which illustrates the value of the recommended approach."*

The mitigation measures set out in to Table 8A.12 to Table 8A.17 do not specifically include assigning responsibility for dust management to a staff member or training staff on the importance of dust management and awareness of dust issues. However, these would be included within the proposed mitigation measures.

**Table 8A.12 : Mitigation for all sites: communications**

| Mitigation measure | Phase 1 | | | | Phase 2 | | | | | Phase 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | S1 | S2 | S3 | S4 | S1 | S2 | S3 | S4 | S5 | S1 | S2 | S3 | S4 | S5 |
| 1. Develop and implement a stakeholder communications plan that includes community engagement before work commences on site. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 2. Display the name and contact details of person(s) accountable for air quality (including dust and odour) issues on the site boundary.<br>This may be the environment manager / engineer or the site manager. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 3. Display the head or regional office contact information. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |

H – Highly recommended D – Desirable N – Not required

**Table 8A.13 : Mitigation for all sites: dust management**

| Mitigation measure | Phase 1 | | | | Phase 2 | | | | | Phase 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | S1 | S2 | S3 | S4 | S1 | S2 | S3 | S4 | S5 | S1 | S2 | S3 | S4 | S5 |
| 4. Develop and implement a DMP, which may include measures to control other emissions, approved by the relevant local authority. The level of detail will depend on the risk, and should include as a minimum the highly recommended measures in this assessment. The desirable measures should be included as appropriate for the site in question. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| Site Management | | | | | | | | | | | | | | |

| Mitigation measure | Phase 1 | | | | Phase 2 | | | | | Phase 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | S1 | S2 | S3 | S4 | S1 | S2 | S3 | S4 | S5 | S1 | S2 | S3 | S4 | S5 |
| 5. Record all dust and air quality complaints, identify cause(s), take appropriate measures to reduce emissions in a timely manner and record the measures taken. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 6. Make the complaints log available to the local authority when asked. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 7. Record any exceptional incidents that cause dust and / or air emissions, either on-site or off-site, and the action taken to resolve the situation in the log book. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 8. Hold regular liaison meetings with other high-risk construction sites within 500 m of the proposed scheme, to ensure plans are coordinated and dust and particulate matter emissions are minimised. It is important to understand the interactions of the off-site transport / deliveries which might be using the same strategic road network routes. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| Monitoring | | | | | | | | | | | | | | |
| 9. Undertake daily on-site and off-site inspection, where receptors (including roads) are nearby, to monitor dust and record inspection results, and make the log available to the local authority when asked. This should include regular dust soiling checks of surfaces such as street furniture, cars and window sills within 100 m of the proposed scheme, with cleaning to be provided if necessary. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |

| Mitigation measure | Phase 1 | | | | Phase 2 | | | | | Phase 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | S1 | S2 | S3 | S4 | S1 | S2 | S3 | S4 | S5 | S1 | S2 | S3 | S4 | S5 |
| 10. Carry out regular site inspections to monitor compliance with the DMP, record inspection results and make an inspection log available to the local authority when asked. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 11. Increase the frequency of site inspections by the person accountable for air quality and dust issues on site when activities with a high potential to produce dust are being carried out and during prolonged dry or windy conditions. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 12. Agree dust deposition, dust flux or real-time $PM_{10}$ continuous monitoring locations with the local authority. Where possible, commence baseline monitoring at least three months before work commences on site or, if at a large site, before work on a phase commences. Further guidance is provided by IAQM (IAQM, 2014) on monitoring during demolition, earthworks and construction. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| Preparing and maintaining the site | | | | | | | | | | | | | | |
| 13. Plan site layout so that machinery and dust causing activities are located away from receptors, as far as is possible. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |
| 14. Erect solid screens or barriers around dusty activities, or the proposed scheme site boundary, which are at least as high as any stockpiles on site. | H | H | H | H | H | H | H | H | H | H | H | H | H | H |

| Mitigation measure | Phase 1 | | | | Phase 2 | | | | | Phase 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

### 8A.3.6 Step 4 determine significant effects

The assessment has identified that there are potentially sensitive dust receptors located near to the respective stages of the proposed scheme site boundary, including residential properties and a residential care home. The receptor locations are reported from the site boundary and not the actual location of activities with the potential to generate dust and the distances used in the assessment are therefore cautious, as activities with high potential to generate dust (including $PM_{10}$ and $PM_{2.5}$) would be offset from the boundary. The sensitivity of the area, which takes into consideration the number and distance of receptors from the site and baseline conditions, are summarised in Table 8A.10 as being Low sensitivity with respect to emissions of $PM_{10}$ and $PM_{2.5}$ and Low to High sensitivity with respect to changes in dust deposition rates and associated effects on amenity.

The scale of the proposed works has been used to judge the dust emission magnitude, ranges from Small to Large dust emission magnitude for demolition, earthworks and trackout activities (Table 8A.9).

Based on the matrix of relationships between the sensitivity of the respective areas and the respective dust emission magnitudes, it is considered that the proposed demolition, earthworks, construction and trackout activities are predicted to be a Negligible to Medium risk (see Table 8A.11) as there is limited potential for emissions of $PM_{10}$ and $PM_{2.5}$ to increase baseline concentrations to a value that is above the air quality objective values set for the protection of human health. For potential dust soiling effects, there is predicted to be a Negligible to High risk from demolition, earthworks, construction and trackout activities. There is the potential for infrequent, short-term episodes when baseline dust deposition rates could be increased by an amount that residents could perceive.

The adoption of good practice dust mitigation measures to manage the generation of emissions at source will therefore be required, and would be set out in a Construction Environmental Management Plan (CEMP).

There are mitigation methods already available that have been successfully applied on other schemes to manage emissions of dust so that significant off-site effects have not occurred. Such measures are considered to be no more than normal good practice that would be adopted by any contractor meeting the requirements of a CEMP. It is considered that there are no potentially dust generating activities proposed that could not be managed using normal good practices so as to prevent significant effects at any off-site receptor, including those located within 20 m of the boundary.

It is assumed that all Low to High risks identified can be reduced through the proposed suite of good practice mitigation measures and the monitoring programme to monitor the effectiveness of the good practice mitigation measures. The measures taken forward from this assessment to control dust emissions and monitor the effectiveness of the mitigation would be implemented on-site in accordance with the CEMP.

IAQM guidance notes that, with the application of good practice mitigation measures of the type available for use on this project, the environmental effect will not be significant at any off-site receptor. IAQM guidance also notes that, even with a rigorous package of mitigation measures in place, such as those to be taken forward from this assessment and included as part of a CEMP, occasional impacts may occur. The CEMP would provide a framework by which the level of mitigation is adapted to respond proactively to the changing risk of dust emissions, so that significant effects are prevented.

## 8A.4 Conclusion

As discussed previously, the measures taken forward from this assessment to control dust emissions and monitor the effectiveness would be set out in the CEMP.

The IAQM guidance recommends that the proposed mitigation ensures that any potential significant adverse effects would not occur, so the residual effects can be considered as not significant. However, even with a rigorous package of mitigation in place, such as those to be included in the CEMP, occasional impacts may occur. For example, where dust emissions occur under adverse weather conditions due to the failure of a dust control measure, local receptors may experience infrequent, short-term dust annoyance. The probable scale of this would not usually be considered adequate to alter the conclusion that, with mitigation in place, the potential effects would be not significant.

Therefore, the likely effect of dust emissions on human health, amenity and ecological sites during construction of the proposed scheme, with the mitigation strategies applied as would be specified in the CEMP, is concluded to be not significant.

# Appendix 8B – Baseline Monitoring

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 8B – Baseline Monitoring.**

## 8B.1 Introduction

In order to characterise the environmental baseline within the study area $NO_2$ diffusion tube monitoring was undertaken by Jacobs over a six month period between July 2015 and February 2016. This included co-location with the automatic $NO_2$ analyser at Broadway, Pontypridd. Results of the Jacobs monitoring survey were adjusted to estimate annual mean concentrations using the approach set out in Box 7.9 of DEFRA guidance LAQM.TG16 (DEFRA, 2016).

## 8B.2 Monitoring Site Locations

$NO_2$ diffusion tube monitoring was undertaken at 24 sites (with three tubes co-located at site 24) within the study area. The location of these sites is provided in section 8.5.4 of the ES Chapter (Air Quality). Sites used within the verification process are presented in Figure 8.2.

## 8B.3 Annualisation of Monitoring Results

The Air Quality Objectives (AQOs) are all based upon concentrations measured over a calendar year and, ideally, periods of monitoring data should be consistent with this. However, it is possible to use data from a shorter period of monitoring to provide an indication of whether exceedances of the annual mean objective are likely.

Monitoring data from the six month survey were annualised following the approach set out in Box 7.9 of DEFRA guidance LAQM.TG16 (DEFRA, 2016) and bias adjusted using a local bias adjustment factor of 1.03 to generate data for 2014 for verification purposes (as the base year traffic model was for 2014). A summary of adjusted results is presented in Table 8B.1.

Three tubes were mounted on the intake vent of the automatic monitoring equipment maintained by Rhondda Cynon Taf County Borough Council located on Broadway, Pontypridd. These are identified as sites 24A, B & C and were used to calculate the local bias adjustment factor.

# Appendix 8C – Air Dispersion Model Process

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 8C – Air Dispersion Model Process.**

## 8C.1 Introduction

The ADMS-Roads model has been developed by Cambridge Environmental Research Consultants Ltd (CERC) and is a version of an atmospheric modelling system that focuses on road traffic as a source of pollutant emissions. Version 4.1 has been used for this assessment.

EFT version 8 was used to estimate road traffic emissions based on traffic flow and speed data. This emission data was then input into the ADMS-Roads model along with meteorological data (for 2014) and receptor locations. The effect of meteorological conditions on dispersion is given a complex treatment within the model. The most significant factors are wind speed and direction and the boundary layer height, which is the calculated mixing depth of the lower atmosphere.

## 8C.2 Assessment scenarios

In order to quantify the air quality impact of the proposed scheme, the pollutant concentrations resulting from the emissions from existing road traffic on local roads have been compared to those resulting from predicted traffic emissions with the proposed scheme in place.

This study assesses the proposed dualling and re-alignment of the A465. Committed developments for the opening year (2022) were considered and are included in the without (DM) and with (DS) traffic predictions.

The traffic flow data for the model was prepared by Jacobs. The following scenarios were modelled:

- Baseline 2014;
- Do Minimum (DM) 2022; and
- Do Something (DS) 2022.

In addition to these, Design Year scenarios 15 years after opening (2037) were considered for regional emissions. The assessment covers different pollutants, as follows:

- local air quality, focusing only on the pollutants NOx, $NO_2$ and $PM_{10}$; and
- regional air quality, focusing on NOx, $PM_{10}$ and $CO_2$ emissions.

## 8C.3 Background concentrations

The background concentrations across the study area have been defined using the national pollution maps published by DEFRA[1]. These cover the whole country on a 1x1 km grid and are published for each year from 2013 until 2030. The mapped background concentrations were compared against measured background values from automatic monitoring stations and the network of passive diffusion tubes within the administrative boroughs of Merthyr Tydfil County Borough Council (MTCBC) and Rhondda Cynon Taf County Borough Council (RCTCBC). To provide a more robust assessment, a further $NO_2$ monitoring survey was undertaken by Jacobs across the study area between July 2015 and February 2016 (which is discussed further in Appendix 8B).

The total $NO_x$ was calculated using the DEFRA 'NOx to $NO_2$ to $NO_x$ calculator v5.1'. This process identified that the DEFRA maps were under reporting $NO_x$, and an uplift factor of 1.464 was applied as shown in Table 8C.1.

**Table 8C.1 Adjustment factors applied to mapped background concentrations used within the modelling assessment**

| Site ID | Site name | X | Y | Site type | Comments | Measured NOx ($\mu g/m^3$) | Measured $NO_2$ ($\mu g/m^3$) | $NO_2$ Data capture (months) | $NO_2$ Data capture (%) | Mapped NOx ($\mu g/m^3$) | Mapped $NO_2$ ($\mu g/m^3$) | Ratio (Measured / Mapped) NOx | Ratio (Measured / Mapped) $NO_2$ |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Merthyr Tydfil CBC | Civic Centre (WAQF2) | 304743 | 206261 | Urban background | Close urban centre (not representative of background) – EXCLUDED | 31 | 19.4 | 11 | 92% | 10.3 | 12.1 | - | - |
| Merthyr Tydfil CBC | Twynyrodyn Infants School (WAQF3) | 305832 | 205941 | Suburban | N/A | 18 | 12.4 | 11 | 92% | 15.2 | 11.4 | 1.183 | 1.088 |
| Merthyr Tydfil CBC | Victoria Street (WAQF15) | 304866 | 206137 | Urban Centre | Next to a bus station and low data capture - EXCLUDED | 41 | 24.3 | 8 | 67% | 10.3 | 12.1 | - | - |
| Merthyr Tydfil CBC | Six Bells Estate (WAQF16) | 303525 | 206388 | Suburban | N/A | 16 | 11.4 | 12 | 100% | 10.0 | 10.2 | 1.604 | 1.117 |
| Merthyr Tydfil CBC | 4 Erw Las (WAQF31) | 303360 | 206822 | Suburban | N/A | 16 | 11.5 | 12 | 100% | 10.0 | 10.2 | 1.604 | 1.127 |
| Jacobs DT Survey | Site 16 | 295089 | 205532 | Background | Poor data capture - EXCLUDED | 30 | 18.9 | 5 | 83% | 8.6 | 9.1 | - | - |
| | | | | | | | | | Average adjustment factor | | | **1.464** | **1.110** |

The DEFRA background $NO_2$ maps were then recalculated from the adjusted NOx concentrations, using the '$NO_2$ Adjustment for NOx Sector Removal Tool v5.1'. The adjusted $NO_2$ concentrations showed good agreement with the measured $NO_2$ concentrations and no further adjustment was necessary'.

A summary of the monitoring results within the study area are detailed in Tables 8.9 and 8.10 of the Environmental Statement Chapter 8: Air Quality.

## 8C.4 Model parameters

**Road Links**

ADMS-Roads requires lengths of road of equal width (and height if specified as a canyon) to be input into the model. Roads can be split into several 'links' to allow for bends and curves in the road layout. Road alignment and width were determined using the Ordnance Survey Mastermap 1:1,250 scale data.

**Traffic Emissions**

The traffic flow data for the model was prepared by Jacobs. Traffic data for the modelling scenarios has been provided from the Saturn traffic models produced by Jacobs on behalf of the Welsh Government. The base year air quality modelling uses traffic data, pollution measurements and meteorological measurements from 2014.

Traffic data which represents the average conditions occurring in specified time periods is presented in Table 8C.2.

**Table 8C.2 Traffic data parameters used in the modelling**

| Traffic period | Time period |
|---|---|
| Annual Average Daily Traffic (AADT) | 00:00 – 23:00 |
| Annual Average Weekday Traffic (AAWT) | 00:00 – 23:00 |
| AAWT AM Peak (AM) | 07:00 – 10:00 |
| AAWT Inter-Peak (IP) | 10:00 – 16:00 |
| AAWT PM Peak (PM) | 16:00 – 19:00 |
| AAWT Off Peak (OP) | 19:00 – 07:00 |

For each time period, the following traffic data parameters were provided:

- total traffic flow, defined as average vehicles / hour;
- percentage heavy duty vehicles (HDV); and
- vehicle speed, in kilometres per hour (kph).

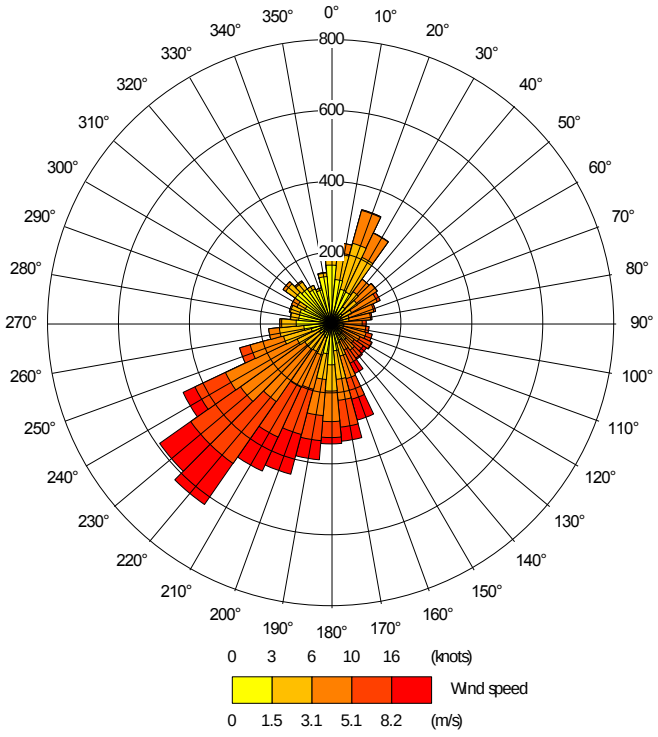

Emission rates representing links in the traffic model were calculated based on the traffic flow, HDV composition, average link speed, and the road type. The emissions were calculated for the AM Peak (AM), Inter-Peak (IP), PM Peak (PM) and Off Peak (OP) periods, and these were then controlled within ADMS using a time varying emission (.fac file), which allows the emission rates to be turned on and off at the times they represent e.g. AM average hour emission rate is emitted between observations made in the meteorological data between 7 am and 10 am.

**Meteorological Data**

In order to assess the impact of the proposed scheme upon local air quality using a dispersion model, it is important to use representative meteorological data. In simple terms, meteorology is the next most significant factor in determining ambient pollutant levels, after emissions.

Meteorological data for the dispersion modelling assessment was taken from Sennybridge, Powys, which is located approximately 13 miles north northwest of the proposed scheme and is considered to be the most representative source for the study area. The windrose for 2014 is presented in Figure 8C.1

**Figure 8C.1 Sennybridge, Powys windrose 2014**

**Surface Roughness**

The surface roughness represents the aerodynamic effects of surface friction. This value is an important parameter used to interpret the vertical profile of wind speed and estimate friction velocities which are, in turn, used to define heat and momentum fluxes and turbulence levels. The surface roughness is related to the height of surface elements; typically, the surface roughness is approximately 10% of the height of the main surface features in the preceding kilometre. The greater the surface roughness value used the more mixing of pollutants will occur. For example, the ADMS model suggests a surface roughness of one for cities or wooded areas and 0.5 for open suburbia.

Surface roughness varies across the study area. A surface roughness length of 0.5 m was used in this assessment to represent the meteorological data site and the air quality study area.

**Monin Obukhov Length**

ADMS models use the Monin Obukhov length as a parameter to describe the turbulent length scale which is dependent on meteorological conditions. Given the nature of the majority of the study area tends to be relatively open and its surrounding districts, a minimum Monin Obukhov length of 10 m was set. A minimum length can be used to account for the urban heat island effect, whereby retained heat in cities causes convective turbulence, which prevents the formation of a very shallow boundary layer at night.

**Terrain**

The terrain has an effect on the flow field in the air above it. It is recommended that the effect of terrain is incorporated into ADMS-Roads where gradients of greater than 10% exist within the modelled area, or a short way outside of it. The effect of terrain was not included in the assessment, though it was considered.

**Street Canyon**

'Street canyons' in air pollution science are roads with continuous high buildings on either side. This arrangement tends to impede the dispersion of pollutants from the road, particularly when the wind is at right angles to it, since a vortex is created in the 'street canyon', retaining the pollution.

No road links were identified as being 'street canyons' within the study area. This feature was therefore not included within the modelling assessment.

**Receptors**

A total of 96 human receptors and 41 nature conservation sites were included in the assessment. The building usage was identified using an Ordnance Survey Address Base Plus data within ArcGIS 10.4. The grid reference was adjusted to represent the worst-case façade of the property. The resulting list was inserted into the model as an asp file. All representative human health receptor points were given a height of 1.5 m. All representative ecosystem receptor points were modelled at ground height or 0 m.

## 8C.5 Model verification and adjustment

The comparison of modelled concentrations with local monitored concentrations is a process termed 'verification'. Model verification investigates the discrepancies between modelled and measured concentrations, which can arise due to the presence of inaccuracies and / or uncertainties in model input data, modelling and monitoring data assumptions. The following are examples of potential causes of such discrepancy:

- estimates of background pollutant concentrations;
- meteorological data uncertainties;
- traffic data uncertainties;
- model input parameters, such as 'roughness length'; and
- overall limitations of the dispersion model.

**Model Precision**

Residual uncertainty may remain after systematic error or 'model accuracy' has been accounted for in the final predictions. Residual uncertainty may be considered synonymous with the 'precision' of the model predictions, i.e. how wide the scatter or residual variability of the predicted values compare with the monitored true value, once systematic error has been allowed for. The quantification of model precision provides an estimate of how the final predictions may deviate from true (monitored) values at the same location over the same period.

**Model Performance**

An evaluation of model performance has been undertaken to establish confidence in model results. LAQM.TG (16)[2] identifies a number of statistical procedures that are appropriate to evaluate model performance and assess uncertainty. The statistical parameters used in this assessment are:

- root mean square error (RMSE);
- fractional bias (FB); and
- correlation coefficient (CC).

A brief for explanation of each statistic is provided in Table 8C.3 and further details can be found in LAQM.TG (16) Box 7.17.

**Table 8C.3 Model performance statistics**

| Statistical parameter | Comments | Ideal value |
|---|---|---|
| RMSE | RMSE is used to define the average error or uncertainty of the model. The units of RMSE are the same as the quantities compared.<br>If the RMSE values are higher than 25% of the objective being assessed, it is recommended that the model inputs and verification should be revisited in order to make improvements.<br>For example, if the model predictions are for the annual mean $NO_2$ objective of 40 µg/m$^3$, if an RMSE of 10 µg/m$^3$ or above is determined for a model it is advised to revisit the model parameters and model verification.<br>Ideally an RMSE within 10% of the air quality objective would be derived, which equates to 4 µg/m$^3$ for the annual mean $NO_2$ objective. | 0.01 |
| FB | FB is used to identify if the model shows a systematic tendency to over or under predict.<br>FB values vary between +2 and -2 and has an ideal value of zero. Negative values suggest a model over-prediction and positive values suggest a model under-prediction. | 0.00 |
| CC | CC is used to measure the linear relationship between predicted and observed data. A value of zero means no relationship and a value of 1 means absolute relationship.<br>This statistic can be particularly useful when comparing a large number of model and observed data points. | 1.00 |

These parameters estimate how the model results agree or diverge from the observations. These calculations have been carried out prior to, and after adjustment and provide information on the improvement of the model predictions as a result of the application of the verification adjustment factors.

The verification process involves a review of the modelled pollutant concentrations against corresponding monitoring data to determine how well the air quality model has performed. Depending on the outcome it may be considered that the model has performed adequately and that there is no need to adjust any of the modelled results.

[2] Department for Environment Food & Rural Affairs, Local Air Quality Management Technical Guidance (TG16), April 2016

Alternatively the model may perform poorly against the monitoring data, in which case there is a need to check all the input data to ensure that it is reasonable and accurately represented by the air quality modelling process. Where all input data, such as traffic data, emissions rates and background concentrations have been checked and considered reasonable, then the modelled results may require adjustment to improve alignment with the monitoring data. This adjustment may be either using by a single verification adjustment factor to be applied to the modelled concentrations across the study area or a range of different adjustment factors to account for different situations in the study area.

**Air Quality Monitoring Data for Verification**

As discussed previously, air quality monitoring data was collected from MTCBC, RCTCBC and the project specific survey. This data was reviewed to determine the suitability of each of the monitoring locations for inclusion in the model verification process. The criteria used to determine the suitability of the monitoring data for inclusion into the verification process are outlined below:

- monitoring location required to be within 200 m of roads forming the study area;
- monitoring data in 2014 required to be >=75% complete data capture;
- monitoring data influenced by major road emissions sources which were missing from the traffic model, and hence could not be included in the dispersion model were excluded; and
- monitoring data from sites where the exact location could not be accurately identified or validated were excluded.

**Verification Methodology – $NO_x$ / $NO_2$**

The verification method followed the process detailed in LAQM.TG (16)[2]. An initial comparison of the modelled versus monitored results indicated that the model tended to under and over predict against the monitored concentrations. Additionally, there was a high degree of uncertainty or scatter in the model predictions. Model verification adjustment therefore focussed on reducing the uncertainty associated with the modelled results. This is typical in study areas covering large or diverse locations.

The first stage of verification was undertaken by comparing the modelled versus monitored Road NOx. Road NOx measured at the diffusion tubes were calculated using the latest DEFRA NOx to $NO_2$ calculator[3], because diffusion tubes only measure $NO_2$ and do not directly measure NOx.

Once the modelled Road NOx component had been adjusted, this value was used in the DEFRA NOx to $NO_2$ calculator[3], and the calculated Road $NO_2$ component was adjusted following comparison with the monitored Road $NO_2$.

**Verification Summary – $NO_x$ / $NO_2$**

A review was undertaken of the modelled versus monitored performance across the whole study area. It was identified that groups of monitoring sites tended to display similar Road $NO_x$ model performance. As a result a number of verification zones were defined with the intention of improving the model verification process. The description of the verification zones are presented below:

- Zone 1 – A465 Hirwaun;
- Zone 2 – A465 Dowlais Top;
- Zone 3 – Merthyr Tydfil Town Centre; and

[3] Department for Environment Food & Rural Affairs, NOx to $NO_2$ calculator, Version 5.1, June 2016.

- Zone 4 – A465 North Merthyr Tydfil

In total 17 sites were used in the model verification process. The summary results and model performance statistics defined in LAQM.TG (16)[2] are provided in Table 8C.4. Tables 8C.5 and 8C.6 provide details for sites used for verification and for each modelled receptor in terms of the verification factors and zone.

**Verification Methodology – $PM_{10}$**

There were no $PM_{10}$ analysers within the study area. Therefore, the NOx road adjustment factor has been applied to the modelled $PM_{10}$ road contributions, following guidance in LAQM TG (16)[2].

**Table 8C.4 Verification zone model performance – $NO_x$ and $NO_2$ roads contribution adjustment**

| Parameter | No Adjustment (all zones) | With Adjustment | | | |
|---|---|---|---|---|---|
| | | Zone 1 | Zone 2 | Zone 3 | Zone 4 |
| No. sites | 17 | 7 | 5 | 2 | 3 |
| Mod $NO_x$ Rds v Mon $NO_x$ Rd Factor | N/A | 1.86 | 3.81 | 2.47 | 1.76 |
| Mod $NO_2$ Rds v Mon $NO_2$ Rd Factor | N/A | 1.02 | 0.99 | 0.99 | 1.01 |
| RMSE 1-stage | 9.11 | 2.68 | 5.40 | 0.25 | 1.45 |
| FB 1-stage | 0.39 | 0.02 | 0.00 | 0.00 | 0.00 |
| CC 1-stage | 0.56 | 0.90 | 0.48 | 1.00 | 0.93 |
| No with +-25% 1-stage | 0 | 7 | 3 | 2 | 3 |

The statistics support the methodology adopted. The statistics show that the RMSE, FB and CC improve when a zonal factor is used for adjustment, when compared to the RMSE and FB for unadjusted results across the whole study area. The slight systematic tendency to under predict (as indicated by FB) is reduced for each zone.

**Table 8C.5 Verification zones and factors for verification sites**

| Site | NOx road adjustment factor | $NO_2$ road adjustment factor | Zone |

# Appendix 8D – Air Quality Human Receptor Results

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 8D – Air Quality Human Receptor Results.**

This section contains the results for all modelled receptors in the study area. Receptors can be identified by postal address or grid reference. The receptors within Table 8D.1 and Table 8D.2 are only relevant to human health exposure.

The receptors with a prefix of R represent existing human health receptors and contain the postal address. In some instances where there are different addresses within close proximity of each other the address may not be accurate such as terraced or semi-detached properties.

**Table 8D.1 : Modelled $NO_2$ results at human receptors assessed**

| Receptor ID | Grid reference | | Address | Property use | Distance (m) to road within DS | $NO_2$ concentration (µg/m$^3$) | | | | |

# Appendix 8E – Designated Site Assessment

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 8E – Designated Site Assessment.**

## 8E.1 Introduction

Some air pollutants can have an adverse effect on vegetation. Concentrations of pollutants in air and deposition of particles can damage vegetation directly or affect plant health and productivity. Deposition of pollutants to the ground and vegetation can alter the characteristics of the soil, the pH and nitrogen availability that can then impact on plant health and species composition. Some plant species rely on the soil being nutrient-poor, so an increase in nutrient levels through nitrogen deposition can cause these species to be lost through competition by species, which thrive at higher nutrient levels. The pollutant of most concern for sensitive vegetation near roads is oxides of nitrogen (NOx). Increases in concentrations of NOx directly increase nitrogen deposition.

The 1979 Convention on Long-Range Transboundary Air Pollution was established within the framework of the United Nations Economic Commission for Europe (UNECE). The Convention was the first international legally binding instrument to deal with problems of air pollution on a broad regional basis. It is extended by eight related protocols. The overall intention is to reduce pollutant emissions internationally; the reduction has been taking place for many pollutants, including (NOx). The Gothenburg Protocol considers the linked impacts of NOx, ammonia, sulphur dioxide ($SO_2$) and volatile organic compounds (VOCs) in relation to the issues of acidification, eutrophication and photochemical oxidants.

The institutional framework set up by the UNECE is the source of information used to evaluate impacts on habitats at a local rather than a regional level.

In order to protect certain habitats and species, legislation is in place to reduce the impacts of development on sensitive ecosystems. The sites of these are given legal designations. These include Special Areas of Conservation (SAC), Special Protection Areas (SPA) (for bird conservation), Ramsar Sites (wetland sites for bird conservation), and Sites of Special Scientific Interest (SSSI).

The current policy of the UK agencies associated with environmental protection (which in Wales includes Natural Resources Wales) is that developments should be assessed for their impact on critical levels and critical loads at designated sites in all locations of the country. For road schemes DMRB is adopted in Wales. Designated ites predicted to exceed the annual mean $NO_x$ AQO (30 µg/m$^3$) without (DM) and with (DS) the proposed scheme in place have the potential for significant effects to occur and further consideration is given to the magnitude of change at these locations. DMRB defined ecological sites include national and international designated sites such as Site of Special Scientific Interest (SSSI), Special Area of Conservation (SAC), Special Protection Areas (SPAs) and Ramsars. Therefore, for this assessment, which has follows DMRB, this appendix provides supplementary information which was not required for the DMRB assessment (as none of the DMRB defined sites met the criteria for further consideration), such as critical loads and other types of designated sites.

## 8E.2 Protection of habitats and ecosystems

Ecological receptors within transects up to 200m from a selected ecological site boundary were modelled and the concentrations were compared to the relevant critical levels for the protection of vegetation and ecosystems, as set out in Table 8E.1. A ‘critical level’ is an air quality standard or guideline for ambient concentrations of a pollutant that applies at ecological receptors. Similar to the assessment criteria set out for the protection of human health, there are Air Quality Objectives (AQOs) and Environmental Assessment Levels (EALs) that exist for the protection of vegetation and sensitive ecological sites.

**Table 8E.1 : Critical Level for Oxides of Nitrogen (NOx) from the Air Quality Strategy**

| Pollutant | AQO µg/m$^3$ | Measured as | Date to be achieved by |
|---|---|---|---|
| Nitrogen oxides (NOx) – for the protection of vegetation and ecosystems | 30 µg/m$^3$ | Annual mean | 31 December 2000 |

The modelled nutrient nitrogen deposition and acid deposition at ecological sites were compared to the site specific, relevant critical loads. The critical loads for designated habitat sites in the UK have been published by the Centre for Ecology and Hydrology (CEH) and are available from the UK Air Pollution Information System (APIS) website[1]. Critical loads are defined on the APIS website as, "…a quantitative estimate of exposure to one or more pollutants below which, significant harmful effects on specified sensitive elements of the environment do not occur according to present knowledge."

The critical loads for the designated ecological sites considered in this assessment are set out in Table 8E.2 and Table 8E.3

The selection of the acid deposition and nutrient nitrogen deposition critical loads for all designated sites, were based on identifying the vegetation and habitat types present at each site using the 'Site Relevant Critical Loads' tool on the APIS website. This tool provides a list of the broad habitat features that are present at each designated ecological site. It then lists all the specific priority habitats within that site, regardless of whether they are present or not. The features identified in citations or provided by the scheme ecologist were selected and assessed.

For candidate wildlife sites (CWS), ancient woodlands (AW) and the marsh fritillary (MF) supporting sites, the 'Search by Location' tool using the site specific grid reference was used to determine the critical loads, and the specific habitat features present at each site were selected on the APIS website[1] with guidance from the project ecologist.

Deposition rates of nitrogen and acid vary based on whether they are depositing on short or tall vegetation. Where an ecological receptor contained habitat types representing both tall and short vegetation, existing deposition rates and critical load values were obtained for each of these separately.

For nitrogen deposition, the CLs are provided as a range, and it is accepted standard good practice to apply the lower end of the range in the determination of significance of the predicted increase, as agreed with NRW (NRW, 2016b). For acid deposition, it is more complex as the CL is made up of a number of values that represent a CL function, based on the nitrogen and sulphur-derived acid deposition. There are rules on how this critical load function should be applied, (as specified on the APIS website[1] and within AQTAG06[2], which were followed for the assessment.

**Determining Significance**

This assessment has followed DMRB IAN 174/13 (Highways Agency, 2013b) for the determination of significant effects. However, for completeness the calculations required to determine the potential for significant effects in line with guidance provided by the Environment Agency [3] (Environment Agency, 2016) are also provided. This is summarised below.

i. Where the process contribution (PC) is less than 1% of the relevant critical level or critical load, the emission is not likely to have a significant effect alone or in combination irrespective of the existing concentrations or deposition rates.

ii. Where the contribution is above 1%, further consideration of existing background concentration or deposition rate is required, and where the total concentration or deposition is less than 70% of the critical level or critical load, calculated in combination with other committed projects or developments included within the traffic data, the emission is considered to be unlikely to have a significant effect.

iii. Where the contribution is above 1%, and the total concentration or deposition rate is greater than 70% of the critical level or critical load, either alone or in combination with other committed projects or developments, then this may indicate a significant effect and further consideration is likely to be required. This would occur on a site-by-site basis through determination of the applicability of the critical levels, directly applicable critical loads at each site, and further assessment by qualified ecologists as part of the assessment set out in Chapter 8: Air Quality.

The above approach is used to give a clear definition of what effects can be disregarded as insignificant, and which need to be considered in more detail in relation to the predicted annual mean concentrations or deposition.

For other sites such as the assessed ancient woodland (AW) sites, guidance set out in the Environment Agency risk assessment guidance (Environment Agency, 2016) states that:

"If your emissions meet both of the following criteria they're insignificant – you don't need to assess them any further:

[2] Environment Agency, Technical Guidance on detailed modelling approach for an appropriate assessment for emissions to air. AQTAG06, updated version (approved March 2014).

[3] Environment Agency, Air emissions risk assessment for your environmental permit, August 2016.

- the short-term PC is less than 100% of the short-term environmental standard; and
- the long-term PC is less than 100% of the long-term environmental standard".

This guidance was adopted for use in this assessment for the identification of potentially significant effects at the ancient woodland sites.

Based on the specific guidance for the determination of significance described above, it is not possible to assign a magnitude of change descriptor to the predicted changes in ambient concentrations of pollutants or deposition rates at sensitive ecological sites due to the varying methods specified for determination of the significance of effects. As with the consideration of effects at human receptors, the value of the receptor is built into the criteria for the determination of significance.

**Methodology**

Traffic is screened for the 'affected roads' in accordance with DMRB HA 207/07. Designated sites within 200 m of the affected roads are identified, along with the habitat type with the most stringent Critical Load (CL), as reported by APIS[1]. The quoted lower nutrient nitrogen deposition CL thresholds are advised to be used at the screening stage of an assessment; these are shown in Table 8E.2 and Table 8E.3.

**Scheme Impacts**

The complete list of modelled $NO_x$ concentrations, nutrient nitrogen and acid deposition results are presented in in Table 8E.4, Table 8E.5 and Table 8E.6. Table 8E.4 presents the modelled $NO_x$ concentrations and the determination response for the further consideration and assessment of deposition in accordance with HA DMRB guidance & IAN174/13, however, this consideration has been applied to all sites, including those not normally included in HA DMRB guidance (e.g. SINCs and AWs). Note, receptor points modelled that are affected by the proposed scheme (i.e. built over) are italicised and the results are invalid at these locations. The term 'exceedence' is used to identify sites which are predicted to exceed the annual mean $NO_x$ AQO in the DM and DS. The sites identified for further consideration are not those that need to be consided under DMRB but do show an exceedence of the AQO and a change in concentration >0.4 ug/$m^3$.

**Table 8E.4 : Predicted change in $NO_x$ concentrations and identification of potential significant effects**

Rows which have been italicised and greyed out are receptor points which are removed by the proposed scheme and are not valid for analysis. The numerical suffix after the receptor name denotes the distance from the ecological receptor boundary. Zero is at the boundary, 1 equates to 10 m back and so on.

| Receptor name | Annual mean NOx Concentration (µg/m³), AQO = 30 µg/m³ | | | Change as % of AQO | Determination for further consideration required (in accordance with IAN 174/13) | | | Further consideration required to determine the potential for significance |

**Table 8E.6: Predicted acid deposition rates at modelled locations**

Italicised and greyed out rows are transect points which are removed with the proposed scheme and therefore the results are not valid for analysis.

# Appendix 9B – Cultural Heritage Gazetteer

**The two tables contained within this document are complete replacements of the corresponding tables published in the July 2017 Environmental Statement Volume 2 Appendix 9B (HLCA 12 and HLCA 14). There are no further changes to Appendix 9B as published in July 2017.**

| | |
|---|---|
| **HLCA Number** | 12 |
| **HLCA Name** | Cefn Coed Cemetery and Jewish Burial Ground |
| **Sub Topic** | Historic Landscape Character |
| **NGR** | SO 02529 08312 |
| **Easting** | 302529 |
| **Northing** | 208312 |
| **Mapsheet** | SO |
| **Broad Type** | Park and Garden |
| **Specific Type** | Funerary and Religious |
| **Designation** | Grade II Registered Historic Park and Garden |
| **Reference** | PGW (Gm) 70 (MER) |
| **Condition** | Good |
| **Period** | Post-Medieval |
| **Value** | High |
| **Historical Value** | Cefn Coed cemetery is the oldest and largest general public cemetery in Merthyr Tydfil. Some of the graves are of great historic interest, reflecting a wide range of occupations and wealth. Historical events, such as pit disasters, are also commemorated. A few memorials are of value for their sculptural and monumental qualities and include the work of the well-known Victorian sculptor Joseph Edwards. [1] [2].<br>The cemetery is also one of the largest Jewish cemeteries in Wales and was established in the 1860s by the then thriving Merthyr Hebrew Congregation. The growth of the Jewish population in the area was linked to the expansion of the mining and ironworks industry in the locality. Towards the end of the 20th century however, the Jewish population declined. |
| **Aesthetic Value** | Cefn Coed cemetery's aesthetic value is signifiantly enhanced by its location along the side of the Taf Fawr river valley, an impressive steep-sided U-shaped valley. The Registered Historic Park and Garden designation for the cemetery identifies three Significant Views within it, which all add to the cemetery's aesthetic value. These views are all originate at the entrance to the cemetery, adjacent to the Cemetery gate lodge, off Upper High Street (A4054). Two of the Significant Views look westward across the valley, whilst a third Significant View looks southwest, across tops of trees encompassing fields within Brecon Beacons National Park.<br>Views within the cemetery also enhance the aesthetic value of the cemetery from the combination of planting and structures with the natural |

| | |
|---|---|
| | topography of the landscape. The visual value of the planting within the cemetery includes large number of mature specimen trees, including conifers and deciduous trees.<br>Although the A470 road runs alongside it, this is largely screened by trees and although there are some filtered views through trees from the Cefn Coed Cemetery of the A465 road viaduct, the cememtery retains a rural a serene and sheltered character which adds to its aesthetic value. |
| **Communal Value** | Asset 135 is still in use as a cemetery and burial ground area, which is still visited by the community today. Given this continuting use as a burial ground this strengthens the communities association with the asset, and enables them to take a sense of ownership of asset. |
| **Evidential Value** | Apart from the loss of the chapel of rest it survives in its entirety, with its original layout. [1] [2]. The surviving gravestones provide evidential value of the names, health and occupations of ordinary working men and women throughout the Victorian and modern eras as well as their religious beliefs and denominations. |
| **Setting** | The setting of the two parts of the Cen Coed cemetery is defined by the Essential Setting, as defined as part of the Cadw's designation of the site as a Grade II Registered Historic Park and Garden. Although the site is defined to the west by A470 road and the to south by the A465 road, with the A4054 to the east, the cemetery is largely well-screened by trees and the topography. The Essential Setting is therefore confined to relatively narrow strips of land forming a buffer and link between the two cemetery areas. The Essential Setting also includes an area immediately adjacent to the A470 and A465 roundabout and the A465 viaduct which defines the southern extent of the cemetery's setting. |
| **Description** | Merthyr Tydfil was probably the largest iron-making town in the world in the early to mid-1900s, with an output calculated to be a quarter of that of the entire United States of America. The town, and its associated landscape, was rapidly transformed from a modest village in the 1750s to the largest town in Wales by 1801.<br>Cefn Coed cemetery is the oldest and largest general public cemetery in Merthyr Tydfil. Apart from the loss of the chapel of rest it survives in its entirety, with its original layout. Some of the graves are of great historic interest, reflecting a wide range of occupations and wealth. Historical events, such as pit disasters, are also commemorated. A few memorials are of value for their sculptural and monumental qualities and include the work of the well-known Victorian sculptor Joseph Edwards RA. [1] [2]<br>The cemetery is also one of the largest Jewish cemeteries in Wales and was established in the 1860s by the then thriving Merthyr Hebrew Congregation. The growth of the Jewish population in the area was linked to the expansion of the mining and ironworks industry in the locality. The grounds were purchased in the 1860's with some reports suggesting that the first burial took place in 1867 and others in Feb 1872. The cemetery includes a surviving small, brick prayer house or '*Ohel'* which served the Jewish population in the locality of Merthyr where the mining and iron industries employed Russian, Romanian and Polish refugees. A plaque over the '*Ohel'* door dated December 1898 states that Mrs Jacobs paid £50 for erection of this building in memory of her husband Abraham Jacobs. The However, towards the end of the 20th century however, the Jewish population declined. The Jewish Burial Ground is of great historic interest |

in reflecting the presence of a thriving Jewish community in Merthyr Tydfil in the nineteenth century.

The cemetery's is located along the side of the Taf Fawr river valley, an impressive steep-sided U-shaped valley. The RHPG designation for the cemetery identifies three Significant Views within it, which all add to the cemetery's aesthetic value. These views are all originate at the entrance to the cemetery, adjacent to the Cemetery gate lodge, off Upper High Street (A4054). Two of the Significant Views look westward across the valley, whilst a third Significant View looks southwest, across tops of trees encompassing fields within Brecon Beacons National Park.

The Registered Historic Park and Garden is divided into two main cemetery areas, either side of the Taf Fawr valley, with a fairly contained Essential Setting around them. The main cemetery area to the east of the valley encompasses three Significant Views looking westard are located alongside a neo-Gothic entrance lodge to the cemetery.

The cemetery retains significant areas of man-made planting which combined with the natural topography of the landscape to provide a serene atomosphere. The planting within the cemetery includes large number of mature specimen trees, including conifers and deciduous trees.

Historic gravestones provide evidence of the names, health and occupations of ordinary working men and women throughout the Victorian and modern eras as well as their religious beliefs and denominations [3].

Cefn Coed Cemetery is situated at the north end of the village of Cefn-coed-y-cymmer (wooded ridge at the river confluence) on the north-west edge of Merthyr Tydfil. It occupies the lower, sloping sides of the Taf Fawr valley, divided into two sections by the river. On its east side it is flanked by a road (the former A470, now the A4701). Apart from the south-west end, where the cemetery abuts the A470/A465 roundabout, the setting is peaceful and rural, with the ground rising above the cemetery to upland moorland on the east, west and north.

The cemetery is about 40 acres in extent, the largest in Merthyr Tydfil. It can be divided into four main sections: the oldest, Cefn, on the east flank of the Taf Fawr valley; the Ffrwd section, on the west flank and the Pontycapel and Capel Fach sections above the Ffrwd. Each section represents a phase of development and expansion since the original area was laid out.

The original, Cefn, section of the cemetery was created in 1859, at a time when Merthyr Tydfil was experiencing a huge population explosion (its population had reached over 50,000 in 1850). The shortage of space in existing burial grounds became acute, a situation exacerbated by cholera outbreaks and high infant mortality. An Act of Parliament in 1850 enabled the local Board of Health, set up in 1850, to lease land in Breconshire for a new cemetery and the first burial took place on 16th April 1859. The cemetery contains both consecrated and unconsecrated ground and there is a small section of 'Irish' graves, catering for the large Irish Catholic presence in Merthyr from the mid nineteenth century onwards.

In social terms, the cemetery was mainly for the middle and skilled working classes: there are graves to merchants, shopkeepers, lawyers and industrial workers (for instance, James Hitchin, nightwatchman at Abercanaid pit). There are a number of graves of historical interest, some of which are described below. They include that of Abel Evans (1866), an early member of the Mormon church, and twenty-four men and boys, aged between 13 and 50, killed in a mining explosion at Blaenllecha, Llanwonno, in November 1867.

Architecturally, most of the memorials are undistinguished but there is evidence of the work of a small number of more accomplished monumental masons, such as Washington Morgan of Pontmorlais. Morgan's monument to Charles Taylor, 'Professor' of music and music seller, of Merthyr, has a relief of musical instruments above the inscription. There are also two substantial memorials of historical importance, to the Lewis family and to William Harris. These are described below.

During the nineteenth century burials averaged about 400 per year. In 1902, when the road to Cardiff (the former A470) was widened a portion of the St Tydfil graveyard was removed and the burials transferred to Cefn Cemetery. Those reburied included Charles Wood, who built the first iron furnaces at Cyfarthfa ironworks.

The cemetery was expanded by opening a large new area, the Ffrwd, on the west side of the river, in 1905. Further expansion took place above the Ffrwd with the opening of the Pontycapel section in 1982 Capel Fach section in 1994.

The oldest, Cefn, part of the cemetery occupies an area, elongated from north to south, between the Taf Fawr river and the A4701. To the south are houses in the village of Cefn-coed-y-cymmer and to the north is the river valley and moorland. The ground drops from east to west and only the steepest slope, next to the river, is not occupied by graves. A random rubble stone wall, about 1.8 m high and with a flat top, runs along the boundary with the road. On the cemetery side this wall is higher (about 4 m high to the south of the entrance). The wall continues, at a lower height, along the eastern part of the north boundary. An older, in part broken down, stone wall continues the boundary as far as the top of the steeper slope down to the river at the west end.

The entrance is off the A4701, at an oblique angle from the road. It is flanked by rebuilt square stone piers, about 2.1 m high, and closed with modern iron gates. To the side, on the east, is a pedestrian entrance with an original heavy iron gate.

Flanking the entrance on the west side is a lodge. This is a small, two-storey stone building of Gothic style, its upper floor at ground level next to the entrance. Doors and windows have Gothic arched tops and there is a small flight of steps up to the door next to the entrance. Inside the cemetery the tarmac entrance drive slopes down to a wide terrace, with a south branch to the ground floor of the lodge. In front, the drive is bounded by a revetment wall about 1 m high topped with large stones.

The terrace below the entrance is semi-circular, tarmacked and used for car parking. Originally there was a large chapel of rest on the terrace. Old photographs show that it was orientated north-south, built of stone in Gothic style, with apsidal north and south ends and the main entrance, flanked by small turreted towers, in the middle of the east side. The chapel is shown on the 1889 Ordnance Survey map. It was demolished at some time during the 1950s (it is still shown on the 1951 Ordnance Survey map).

On the east side of the terrace is a small, modern, utilitarian custodian's office building. Along the semi-circular edge is a single row of graves, a grass slope and below it a stone revetment wall. A narrow path runs around the foot of the terrace. Along the east side, to the north and south of the office, are two small, twentieth and twenty-first century gardens of remembrance with small memorial plaques set in the ground.

The north garden is bounded by low brick walls. Set in the grass bank above this garden is a memorial stone to Emily Stephens, who died in

1867, and Adrian Stephens, the 'Inventor of the steam whistle in the year 1835 and formerly the managing engineer of the Plymouth (iron) works.

The Cefn cemetery is laid out with two drives, to the north and south of the terrace, which loop around in 'teardrop' shapes at the north and south ends of the cemetery. A further drive branches off from the north drive and leads westwards to a bridge over the river and the rest of the cemetery. Planting is mostly informal and consists mainly of coniferous trees. Some of the older deciduous older trees, such as oak, may predate the cemetery.

To the north of the terrace the drive is lined with cypresses on the west side. There is a steep grass bank below the east boundary wall, then a level grass terrace, then a grass slope to the west of the drive. A mixture of large deciduous and coniferous trees are planted on the bank. Graves in this area date to the 1860s, 1870s, 80s and 90s. Some are monumental and sculptural, for instance the grave of John Daniel Jones (draper), who died in 1890 aged 39, is ornamented with a sculpture of an angel.

Further north there is no terrace, only the natural, grass slope. At its higher end the graves are quite simple, with vertical headstones, some almost buried, some leaning. They include an iron, coffin-shaped surround to a grave dating to 1873. Large trees include pine and Monkey Puzzle. Beyond, to the north, the ground levels out and Irish yew, Monkey Puzzle and cedar trees flank the drive. The grass slope below, to the west, is laid out mostly with simple headstones.

The loop of the drive is planted with cypresses and is flanked by a large beech tree. Next to its western section is the grave of William Gould, 1810 – 1875, 'Citizen, politician and philanthropist the inventor of the celebrated Merthyr Ballot Box'.

The lower, west side of the cemetery terminates at the top of the precipitous wooded slope down to the river. There is no boundary wall or fence and there are some, now rather neglected and overgrown graves in the trees in the upper part of the slope. These lie in an area that is now unmanaged. At the top of the slope is a large, monumental vault of the Harris family, topped by a very large memorial statue of an angel.

The drive leading down the slope curves around to the south and then leads down to a modern bridge, with piers and splayed stone walls at either end, across the river. The drive is flanked by trees and laurels on its west side and individual conifers on its east. Two old, curving paths, now grassed over, lead up the slope on the east side. The slope is dotted with a few nineteenth-century graves.

To the east of the bridge a straight, stone-edged, tarmac path, with shallow steps of stone risers, leads southwards up the slope. It is flanked with laurel on its west side and there are some graves on the slope below. Half way up the east side is the large vault of the Lewis family of Mardy. This is the largest memorial in the cemetery. Wide stone steps flanked by revetment walls of large stone blocks lead up to the stone vault, with an iron gate, an iron door behind and a cross on top. Engraved in the gate is 'Lewis O'r Mardy 1902'. The memorial commemorates W.T. Lewis (1837 – 1914), and Anne Lewis (1838 – 1902), his wife. W.T. Lewis was Baron Merthyr of Senghenydd, a prominent industrialist in Merthyr's coal trade and a leading local politician. The family seat was The Mardy in Aberdare. There is an adjacent memorial, consisting of a square, kerbed plot, to another member of the Lewis family. Above the main Lewis memorial is a simple cross memorial inscribed 'Jane Harding October 23rd 1864'. At the top of the slope the path joins the main drive south of the entrance.

Below the Lewis memorial is another of significant historical interest, to William Harris, merchant. Although rather hidden and damaged, this is of

sculptural importance in being an early example of the work of the Merthyr-born, well known sculptor Joseph Edwards RA. The sculpture is in the form of a seated female figure (Religion) in classical style, holding a large bible. Edwards was born in 1814 in Abercanaid and died in London, where he had a workshop in Hampstead, in 1882.

The south end of the cemetery is gently sloping and the grass is dotted with cypresses and some Irish yew and oak next to the south boundary. The south boundary is marked by a stone wall at the upper, east, end and iron fencing, which is for the most part broken down, along the remainder of its length. Beyond, the ground drops steeply.

The Ffrwd section, to the west of the river, is a large, rectangular, sloping area planted with conifers and deciduous trees around the perimeter and a few scattered mixed trees within. The road from the bridge over the river curves up the steep slope, flanked by two large wellingtonias. It leads to an entrance flanked by square stone piers about 4 m high. These are flanked by curving iron railings on low stone plinths. The north side is most complete, with an openwork iron pier at the end. There are no gates except a plain pedestrian one on the south side. Either side of the entrance a stone boundary wall, about 1.8 m high, runs northwards and southwards. The Ffrwd section is divided into large, rectangular sections by narrow tarmac drives. Monuments are more restrained in this area, with none of outstanding sculptural or monumental quality.

To the north is an unmanaged, somewhat derelict and very overgrown area in which there are a number of graves, mostly with upright headstones, some of them leaning. There are one or two sculptural monuments.

The graves are of mixed nineteenth-century dates. A large, low, stone monument is engraved with the names and dates of members of the Watkin family, including Gwenllian, Mary and Richard (18 months), and the dates 1781, 1799, 1800, 1831 and 1862. This area is thought to have been a cholera cemetery. It may relate principally to the fourth Merthyr Tydfil cholera outbreak of the 1860s, in which 119 people died.

The final part of the cemetery is the most recently opened area – the Capel Fach and Pontycapel sections. This is a rectangular area to the west of the Ffrwd section, bounded by cypress trees along its east and west sides but with very few trees within it. It slopes gently from north to south, with a steeper slope at the south end. It is divided in two by a central north-side road, which leads to a turning circle at the south end. An old birch tree stands on a relict hedge line which runs east-west across the area.

**The Jewish burial ground**

The Jewish burial ground lies adjacent to the Cefn section of the cemetery, just beyond its north end, on the east side of the A4701. It lies on a west-facing slope, surrounded on the north, east and south by moorland and on the west by a substantial stone revetment wall along the road. The remaining boundaries are simple fences. The main entrance is in the middle of this side. It consists of a doorway with a heavy stonework surround that protrudes slightly from the wall and rises above it, inside which are flights of stone steps to the north and south. There are a further pedestrian entrance and flight of steps at the north end. This leads to a narrow path that runs along the top of the boundary wall.

Inside the main entrance is a small, simple brick chapel of ease, with a gently pitched roof and three simple windows on each long side. The north end has a round-arched door in the centre, flanked by two windows. In the arch is the Star of David and over it a stone plaque with an inscription recording the fact that Mrs Jacobs subscribed £50 towards the building in

| | |
|---|---|
| | memory of her husband Abraham Jacobs in 1898. The interior is very simple, with a wooden lectern, a wooden bench and wooden bier.<br>The burial ground is laid out with east-west rows of graves up the slope, all orientated north-south. They are simple monuments, with upright headstones at the north end of the graves and most have Hebrew inscriptions. The graves date from the 1870s onwards and the most recent ones are at the north end. There is no planting except for a large oak, which probably pre-dates the burial ground, towards the north end. A path runs along the top of the boundary wall.<br>This is one of the largest Jewish burial grounds in south Wales. The plot of land was bought in the 1860s, the money being raised by subscription. Most of the contributors were local people, with larger donations from Baron Lionel de Rothschild (£10), N.M. Adler, Chief Rabbi (£5) and Sir Moses Montefiore (£5). The first burial was in 1872. The donation of £50 in 1898 by Mrs Jacobs helped to provide the finance for the building of the chapel of ease. The cemetery served the growing population of Jewish people in Merthyr during the nineteenth century. During the twentieth century their population declined and the synagogue, in Thomastown, was sold in the 1990s [4]. |

# Executive Summary

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 9D.**

This assessment presents the results of an *Assessment of the Significance of the Impact of Development on the Historic Landscape* (ASIDOHL2) (Cadw *et al*., 2007) with regard to Section 5 and Section 6 of the proposed dualling of the A465 Heads of the Valley road in south Wales ('the proposed scheme').

The proposed scheme is partially located within the Merthyr Tydfil Landscape of Outstanding Historic Interest (MTLOHI), included on the Register of Historic Interest in Wales (Cadw, 1998). The MTLOHI comprises 79 distinct HLCAs, the majority of which have a connection to the extractive and mineral processing industries prevalent in the area from the late eighteenth to the early twentieth centuries. It is this industrial heritage that gives the MTLOHI its distinctive character. The proposed scheme is predicted to have direct physical impacts on 15 HLCAs and their components within the MTLOHI. The same 15 HLCAs would also experience an indirect (non-physical) visual impact as a result of operation of the proposed scheme. Direct physical impacts have been assessed to be Moderate on four HLCAs and Slight on 11 HLCAs. Indirect non-physical (visual) impacts have been assessed to be Considerable on two HLCAs, Moderate on eight HLCAs and Slight on five HLCAs.

This assessment has established that the proposed scheme would have an impact on six industrial landscapes including a former iron works site (HLCA 012), a former quarry area (HLCA 046), two areas of reclaimed industrial land (HLCA 047 and HLCA 078), and two modern urban / industrial estates (HLCA 049 and HLCA50). The proposed scheme will also have an impact on other HLCAs types including residential or agricultural, however these are not essential to the distinctive industrial character of MTLOHI.

The proposed scheme will also have an impact on components of the HLCAs, which include a Scheduled Monument within HLCA 012, a Grade II* Listed Building within HLCA 055 and a Registered Park and Garden within HLCA 061. In relation to the Scheduled Monument, the Gurnos Tramway and Leat Scheduled Monument (Asset 78), within HLCA 012, the proposed widening of the Taf Fechan overbridge has been designed to minimise impact on this component of the HLCA. Furthermore, the loss or damage to landscape features such as mature trees has been avoided where possible.

The proposed scheme has been designed to minimise the indirect visual impacts that will occur on the Grade II* Listed Building the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61) within HLCA 055 and the Registered Park and Garden, Cefn Coed Cemetery (Asset 134) within HLCA 061).

Overall, the proposed scheme would have an impact on the historic landscape on the Register in such a way there would be a measureable reduction in appreciation of its significance. However, this reduction is not considered to be significant, in the context of the whole entirety of the MTLOHI.

# 1. Stage 1: Contextual Information

This assessment, which should be read in conjunction with the Guide to Good Practice on Using the Register of Landscapes of Historic Interest in Wales in the Planning and Development Process (Cadw *et al.,* 2007), presents the results of an Assessment of the Significance of the Impact of Development on Historic Landscape (ASIDOHL2) on Section 5 and Section 6 of the proposed A465 Heads of the Valley road in South Wales ('the proposed scheme').

The ASIDOHL2 is a staged process for assessing the significance of the impact of a development on historic landscape areas on the Register of Landscapes of Historic Interest in Wales ('the Register') (Cadw, 1998).

## 1.1 Summary of the Proposed Scheme

The proposed scheme comprises dualling of approximately 17.7 km of the A465 between Dowlais Top and Hirwaun. For a full scheme description refer to ES Chapter 5: Scheme Description.

The proposed scheme is partially located within a Registered Landscape of Outstanding Historic Interest (LOHI); the Merthyr Tydfil Landscape of Outstanding Historic Interest (MTLOHI). The MTLOHI comprises 79 distinct HLCAs, the majority of which have a connection to the extractive and mineral processing industries prevalent in the area from the late eighteenth to the early twentieth centuries. It is this industrial heritage that gives the MTLOHI its distinctive character.

The proposed scheme in relation to the MTLOHI is show on Figure 1 to this report. The historic landscape citation for MTLOHI is provided in Annex 1 of this report.

## 1.2 Context of the Assessment

The purpose of this ASIDOHL is to assess the overall effect the proposed scheme will have on the MTLOHI and the effects the proposed scheme will have on each of the Historic Landscape Character Areas (HLCAs) within the LOHI.

This assessment is being carried out as part of an ES to accompany a planning application being carried forward under the Highways Act 1980 (as amended) for the proposed scheme and forms an Appendix to the ES Chapter 9: Cultural Heritage.

## 1.3 Consultation

Cadw[1] has been consulted in relation to the proposed scheme. A meeting was held with Cadw in October 2017, at which they requested that the ASIDOHL was revised to follow the Historic Landscape Character data provided by Glamorgan Gwent Archaeological Trust (GGAT) under their Historic Landscape Characterisation programme. This report presents the findings of the revised assessment and the numbering and area extents of the HLC areas within this report and the ES Chapter 9: Cultural Heritage have been amended so they are in keeping with the numbering and area extents as presented by the HLC data obtained from GGAT's Historic Landscape Characterisation.

## 1.4 Study Area

The proposed scheme runs through the northern part of the MTLOHI, from east to west. The MTLOHI is divided into 79 Historic Landscape Character Areas (HLCA) (Cadw *et al*., 2007, GGAT, 2017).

The study area for assessment was defined as 200 m study area extending in all directions from the footprint of the proposed scheme (defined by the ES). Of the 79 HLCAs within the MTLOHI, 20 fall within the 200 m study area. These are listed in Table 1.1.

[1] Cadw is the historic environment service within the Welsh Government.

**Table 1.1 : HLCAs located within the study area**

| GGAT HLCA Ref. | GGAT HLCA Name |
|---|---|
| HLCA 007 | Dowlais |
| HLCA 012 | Cyfarthfa Iron Works |
| HLCA 027 | Taf Fechan |
| HLCA 029 | Ivor Iron Works Area |
| HLCA 030 | Pantcadifor, Rhyd-y-Bedd and Caeracca |
| HLCA 035 | Pengarnddu |
| HLCA 046 | Bryniau Quarries |
| HLCA 047 | Dowlais Top |
| HLCA 049 | Bon-y-Maen |
| HLCA 050 | Gurnos and Galon Uchaf |
| HLCA 052 | Gurnos Farm and Bunker's Hill |
| HLCA 053 | Y Graig, Gurnos |
| HLCA 054 | Lakeside Gardens |
| HLCA 055 | Cefn Coed-y-Cymmer |
| HLCA 056 | A465(T) Heads of the Valleys Road |
| HLCA 061 | Taf Fawr River Valley |
| HLCA 062 | Coed Meurig |
| HLCA 063 | Clwyd-y-Fagwyr, Gellideg and Pen-Llwyn-Deri |
| HLCA 064 | Winch Fawr, Pen-yr-Heolgerrig, Cwm Du, and Upper Cwm Glo Workings |
| HLCA 078 | Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun |

## 1.5 Methodology

Under the assessment methodology provided by Cadw *et al*. (2007), impacts on the historic landscape are identified as:

- ‘direct physical impacts’; those impacts resulting in the surface area of the landscape being directly affected; and
- ‘indirect, physical impacts’; those impacts resulting in a severance or fragmentation of historic landscape areas and ‘indirect (non-physical) visual impacts’; those impacts resulting in an effect on the setting of a historic landscape.

This assessment does not take into account mitigation and, therefore, presents a ‘worst-case’ scenario, in accordance with the Guide to Good Practice on Using the Register of Landscapes of Historic Interest in Wales in the Planning and Development Process (Cadw *et al*., 2007).

No impacts (direct or indirect) were predicted to occur on five HLCAs as set out in Table 1.2. Thus these HLCAs have not been discussed any further in this report.

**Table 1.2 : HLCAs located within the study area that will not be impacted by the Proposed Scheme**

| GGAT HLCA Ref. | GGAT HLCA Name | Rationale |
|---|---|---|
| HLCA 029 | Ivor Iron Works Area | The proposed scheme does not encroach onto the HLCA, and comprises the improvement and upgrade of the existing highway near the industrial area, thus no direct or indirect impact is predicted to occur. |
| HLCA 054 | Lakeside Gardens | The proposed scheme does not encroach onto the HLCA, and comprises the improvement and upgrade of the existing highway near the modern housing development, thus no direct or indirect impact is predicted to occur. |
| HLCA 056 | A465(T) Heads of the Valleys Road | The proposed scheme is in keeping with the existing mid-20th century road. Thus no direct or indirect impact is predicted to occur. |
| HLCA 063 | Clwyd-y-Fagwyr, Gellideg and Pen-Llwyn-Deri | The proposed scheme does not encroach onto the HLCA, and comprises the improvement and upgrade of the existing highway near the industrial settlement, thus no direct or indirect impact is predicted to occur. |
| HLCA 064 | Winch Fawr, Pen-yr-Heolgerrig, Cwm Du, and Upper Cwm Glo Workings | The proposed scheme does not encroach onto the HLCA, and comprises the improvement and upgrade of the existing highway near the industrial area, thus no direct or indirect impact is predicted to occur. |

Of the 15 HLCAs that will be assessed in this ASIDOHL, three include designated assets, which are key characteristics of the HLCAs within which they are situated. This includes:

- the Gurnos Tramway and Leat Scheduled Monument (Asset 78), within HLCA 012;
- the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61), a Grade II Listed Building within HLCA 055; and
- the Cefn Coed Cemetery (Asset 134), a Registered Park and Garden within HLCA 061.

The location of these elements are presented on Figure 2.

## 1.6 Legislation, Policy and Guidance

A summary of the key legislation planning policy and cultural heritage guidance is provided in this section, whilst further detail is provided in Annex 2 of this report and in Appendix 9A: Legislative and Policy Background appended to ES chapter 9: Cultural Heritage.

### 1.6.1 Key legislation

- Ancient Monuments and Archaeological Areas Act 1979;
- Highways Act 1980 (as amended);
- Historic Environment (Wales) Act 2016;
- Planning (Listed Buildings and Conservation Areas) Act 1990; and
- The Planning (Listed Buildings and Conservation Areas (Wales) (Amendment) Regulations 2017.

### 1.6.2 Key policies and Regulations

Planning policy for archaeology and cultural heritage in Wales and local policy relevant to assessment is provided in the following documents:

- Hedgerow Regulations 1997 (amended 2003);
- Historic Environment Strategy for Wales (Welsh Government, 2013);

- Merthyr Tydfil County Borough Council Local Development Plan (MTCBC): Strategic Objective 1; Policy BW6; Policy AS4 (MTCBC, 2011);
- Planning Policy Wales: Edition 9 (PPW9) Chapter 6: Conserving the Historic Environment (Welsh Government, December 2016);
- Planning Policy Wales Technical Advice Note 24 – The Historic Environment (Welsh Government, 2017);
- Rhondda Cynon Taf County Borough Council (RCTCBC) Local Development Plan up to 2021: Policy CS1; Policy EB101 (RCTCBC, 2011);
- Supplementary Planning Guidance: Cyfarthfa Conservation Area Character Appraisal (MTCBC, 2009);
- Technical Advice Note (Wales) 12: Design (Welsh Government, 2014);
- Wales Spatial Plan: People, Places, Futures (WSP) (Welsh Government, 2008); and
- Welsh Assembly Government Conservation Principles for the Sustainable Management of the Historic Environment in Wales (Welsh Assembly Government, 2011).

### 1.6.3 Key guidance

This assessment has been prepared based on the guidance provided by:

- Guide to Good Practice on Using the Register of Landscapes of Historic Interest in Wales in the Planning and Development Process, Revised (2nd) Edition including revisions to the assessment process (Cadw, *et al*, 2007);
- Managing Historic Character in Wales (Cadw, 2017);
- Setting of Historic Assets in Wales (Cadw, 2017);
- The Setting of Heritage Assets. Historic Environment Good Practice Advice in Planning: 3 (Historic England, 2015); and
- Understanding the Archaeology of Landscape: A guide to good recording practice (English Heritage, 2007).

## 1.7 Confidence

Sources used are considered appropriate and adequate for the requirements of this assessment.

## 1.8 Supporting Statement

The July 2017 ASIDOHL was undertaken by Jim Mower, MA Archaeology, ACIfA, who was at that time employed by Jacobs UK Ltd on behalf of the Welsh Government. This revision of the ASIDOHL (March 2018) has been undertaken by Rebecca Thompson-Lawrence, MA Archaeology & Heritage Analysis Interpretation and Management, MCIfA, who is employed by Jacobs UK Ltd on behalf of the Welsh Government. Miss Thompson-Lawrence is experienced in undertaking impact assessment in relation to the historic environment and has completed such work for road schemes for Highways England.

## 1.9 Sources Consulted

The following sources were consulted:

- Cadw, 1998. Register of Landscapes of Outstanding Historic Interest in Wales. Cadw, CCW, ICOMOS UK;
- Glamorgan Gwent Archaeological Trust website: Ggat.org.uk (2017). Merthyr Tydfil Main. [online] Available at: http://www.ggat.org.uk/cadw/historic_landscape/Merthyr%20Tydfil/English/Merthyr_Main.htm [Accessed 11 January 2017];
- Natural Resource Wales Landmaps. (2017). Map. [online] Available at: http://landmap-maps.naturalresources.wales/ [Accessed 11 January 2017]; and

- Walkover survey was undertaken on 24 and 25 January 2016. This comprised a non-intrusive survey along the route of the scheme, during which a visual inspection of identified heritage assets, was made, observations were noted and photographs were taken.

Figure 1 shows the MTLOHI in relation to the proposed scheme and all HLCAs with the potential to be impacted by it. Chapters within this ES relevant to Cultural Heritage include:

- Chapter 5 – Scheme Description;
- Chapter 9 – Cultural Heritage;
- Chapter 10 – Landscape and Visual Impact;
- Chapter 12 – Geology and Soils; and
- Chapter 14 – Noise and Vibration.

# 2. Stage 2: Assessment of direct, physical impacts of development

Stage 2 describes and quantifies the direct, physical impacts of development on HLCAs affected by the proposed scheme. This is expressed in absolute terms (the percentage or proportion of the surface area of the HLCA or elements therein it directly affects) and in relative terms (the percentage or proportion of elements within the HLCA that are predicted to be affected). Each character / element is recorded using the categories adopted by the Welsh Archaeological Trusts.

The proposed scheme would result in a direct physical impact on 15 HLCAs and their key elements that contribute towards the MTLOHI. The 15 HLCAs are set out in Table 2.1 and shown on Figure 1.

**Table 2.1 : HLCAs potentially directly impacted by the proposed scheme**

| GGAT HLCA Ref. | GGAT HLCA Name |
|---|---|
| HLCA 007 | Dowlais |
| HLCA 012 | Cyfarthfa Iron Works |
| HLCA 027 | Taf Fechan |
| HLCA 030 | Pantcadifor, Rhyd-y-Bedd and Caeracca |
| HLCA 035 | Pengarnddu |
| HLCA 046 | Bryniau Quarries |
| HLCA 047 | Dowlais Top |
| HLCA 049 | Bon-y-Maen |
| HLCA 050 | Gurnos and Galon Uchaf |
| HLCA 052 | Gurnos Farm and Bunker's Hill |
| HLCA 053 | Y Graig, Gurnos |
| HLCA 055 | Cefn Coed-y-Cymmer |
| HLCA 061 | Taf Fawr River Valley |
| HLCA 062 | Coed Meurig |
| HLCA 078 | Dowlais Great Tip, Trehir and Twyn-y-Waun |

The development of the proposed scheme would have an impact on the above 15 HLCAs and their key elements as a result of land-take, landscaping and mounding and the placement of compound / set down areas.

The proposed scheme will have a direct physical impact on 0.03 ha of the Gurnos Tramway and Leat Scheduled Monument (Asset 78) within HLCA 012 and a direct physical impact on 0.4 ha of the Registered Park and Garden, Cefn Coed Cemetery and Jewish Burial Ground (Asset 134), comprising the physical removal of woodland and scrub within the scheduled and park and garden areas. Given the distance between the proposed scheme and the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61), the development will not have any direct physical impact on this key element within HLCA 055.

The results of the assessment of the direct, physical impacts on the 15 HLCAs is presented in Annex 3 of this report, whilst a summary of overall magnitude of direct impacts on the HLCAs is presented in Table 2.2

**Table 2.2 : Summary of overall magnitude of direct impacts on HLCAs**

| GGAT HLCA Ref. | Name | Score | Magnitude |
|---|---|---|---|
| HLCA 007 | Dowlais | 5.5 (6) | Slight |
| HLCA 012 | Cyfarthfa Iron Works | 6.5 (7) | Slight |
| HLCA 027 | Taf Fechan | 5 | Slight |
| HLCA 030 | Pantcadifor, Rhyd-y-Bedd and Caeracca | 5.5 (6) | Slight |
| HLCA 035 | Pengarnddu | 7.5 (8) | Slight |
| HLCA 046 | Bryniau Quarries | 7 | Slight |
| HLCA 047 | Dowlais Top | 5 | Slight |
| HLCA 049 | Bon-y-Maen | 6.33 (6) | Slight |
| HLCA 050 | Gurnos and Galon Uchaf | 5 | Slight |
| HLCA 052 | Gurnos Farm and Bunker's Hill | 8.5 (9) | Moderate |
| HLCA 053 | Y Graig, Gurnos | 11.33 (11) | Moderate |
| HLCA 055 | Cefn Coed-y-Cymmer | 5 | Slight |
| HLCA 061 | Taf Fawr River Valley | 10.33 (10) | Moderate |
| HLCA 062 | Coed Meurig | 10.5 (11) | Moderate |
| HLCA 078 | Dowlais Great Tip, Trehir and Twyn-y-Waun | 5 | Slight |

From Table 2.2 it is evident that the proposed scheme would have an impact of moderate magnitude on four HLCAs and an impact of slight magnitude on the remaining 11 HLCAs.

# 3. Stage 3: Assessment of Indirect Impacts

Stage 3 describes and quantifies the indirect impacts of the development on all HLCAs affected by the proposed scheme. Indirect impacts are categorised as being mainly physical or visual in nature.

Physical impacts can result from an increased risk of exposure, increased management needs, the severance, fragmentation or alteration of related elements, the frustration of historic land use practices or a frustration of access.

Indirect non-physical (visual) impacts can occur as a result of impacts on elements of an HLCA from which a development can be seen, impact on the visual connection between elements, the creation of inappropriate connections between elements and visual impact of the development itself resulting from its form or appearance.

Indirect non-physical (visual) impacts have been identified as a result of a walkover survey. The proposed scheme would indirectly impact 15 HLCAs that contribute to the MTLOHI and these are presented in Table 3.1 and shown on Figure 1.

**Table 3.1 : HLCAs which would experience indirect non-physical impacts from the proposed scheme**

| GGAT HLCA Ref. | GGAT HLCA Name |
|---|---|
| HLCA 007 | Dowlais |
| HLCA 012 | Cyfarthfa Iron Works |
| HLCA 027 | Taf Fechan |
| HLCA 030 | Pantcadifor, Rhyd-y-Bedd and Caeracca |
| HLCA 035 | Pengarnddu |
| HLCA 046 | Bryniau Quarries |
| HLCA 047 | Dowlais Top |
| HLCA 049 | Bon-y-Maen |
| HLCA 050 | Gurnos and Galon Uchaf |
| HLCA 052 | Gurnos Farm and Bunker's Hill |
| HLCA 053 | Y Graig, Gurnos |
| HLCA 055 | Cefn Coed-y-Cymmer |
| HLCA 061 | Taf Fawr River Valley |
| HLCA 062 | Coed Meurig |
| HLCA 078 | Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun |

The indirect physical impacts associated with the proposed scheme will relate on the whole to the severance of the HLCAs involving: the severance of field elements, woodland and scrub areas and existing trackways. The proposed scheme would also result in the reduction of the visual amenity of these HLCA elements due to the creation of features such as the new road alignment, the bridges and drainage ponds. The indirect non-physical impacts relate to the visual intrusion the proposed scheme would have on the HLCAs, this primarily relates to the form and appearance of the development, including the offline widening (road and bridge) and embankments / supports, the alteration/introduction of tracks/roads and associated embankments and the introduction of drainage ponds into the landscape.

The proposed scheme would have an indirect non-physical impact on the Registered Park and Garden, Cefn Coed Cemetery and Jewish Burial Ground (Asset 134) and the Grade II* Listed Building, the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61). These impacts will comprise the visual intrusion of the form and appearance of the proposed scheme such as the introduction of bridge and supports into field and woodland elements. The development would also have an indirect non-physical impact on the setting of the Gurnos Tramway and Leat Scheduled Monument (Asset 78) within HLCA 012 which will comprise the widening of the Taf Fechan overbridge and removal of existing trees and scrub.

The results of the assessment of the indirect, non-physical impacts on the 15 HLCAs is presented in Annex 4 of this report, whilst a summary of overall magnitude of indirect impacts on the HLCAs is presented in Table 3.2.

**Table 3.2 : Summary of overall magnitude of indirect impacts on HLCAs**

| HLCA | Name | Score | Magnitude |
|---|---|---|---|
| HLCA 007 | Dowlais | 9.8 (10) | Moderate |
| HLCA 012 | Cyfarthfa Iron Works | 11. (11) | Moderate |
| HLCA 027 | Taf Fechan | 4.2 (4) | Slight |
| HLCA 030 | Pantcadifor, Rhyd-y-Bedd and Caeracca | 10.5 (11) | Moderate |
| HLCA 035 | Pengarnddu | 14.46 (14) | Considerable |
| HLCA 046 | Bryniau Quarries | 12.6 (13) | Moderate |
| HLCA 047 | Dowlais Top | 4.2 (4) | Slight |
| HLCA 049 | Bon-y-Maen | 4.9 (5) | Slight |
| HLCA 050 | Gurnos and Galon Uchaf | 8.4 (8) | Slight |
| HLCA 052 | Gurnos Farm and Bunker's Hill | 13.06 (13) | Moderate |
| HLCA 053 | Y Graig, Gurnos | 11.42 (11) | Moderate |
| HLCA 055 | Cefn Coed-y-Cymmer | 11.2 (11) | Moderate |
| HLCA 061 | Taf Fawr River Valley | 13.5 (14) | Considerable |
| HLCA 062 | Coed Meurig | 12.6 (13) | Moderate |
| HLCA 078 | Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun | 5.6 (6) | Slight |

Table 3.2 shows that the proposed scheme would have an indirect impact of considerable magnitude on two HLCAs, an indirect impact of moderate magnitude on eight HLCAs and an indirect impact of slight magnitude on five HLCAs.

# 4. Stage 4: Evaluation of Relative Importance

Stage 4 evaluates the relative importance of parts of the HCLAs which are directly and / or indirectly or affected by the development, undertaken in relation to:

a) the whole of the HLCA concerned, and /or;

b) the whole of the historic landscape on the Register; and

c) an evaluation of the relative importance of affected HLCAs in a national context and a determination of the average overall value of the HLCAs affected.

It has been established that the proposed scheme would result in a direct physical impact on 15 HLCAs (as set out in Table 2.1) and indirect non-physical impacts on 15 HLCAs (as set out in Table 3.1) of this report. An evaluation of the relevant importance of each HLCA is presented in Tables A6.1 to A6.14 in Annex 5 of this report.

Of the 15 HLCAs, the proposed scheme will have an impact on key characteristics / elements of only seven HLCAs. Thus an assessment of the relative importance has been carried out for these seven HLCAs. No value has been assigned to the remaining eight HLCAs as the elements affected (scrub and woodland, existing roads/tracks and areas of existing modern hardstanding) are considered to be of no value in relation to the Registered Landscape as a whole and nationally. This concerns:

- HLCAs (HLCA 007);
- Taf Fechan (HLCA 027);
- Pantcadifor, Rhyd-y-Bedd and Caeracca (HLCA 030);
- Bryniau Quarries (HLCA 046);
- Dowlais Top (HLCA 047);
- Bon-y-Maen (HLCA 049);
- Gurnos and Galon-Uchaf (HLCA 050); and
- Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun (HLCA 078).

A summary of the overall scores for evaluation of relative importance and grade for each HLCA where key characteristics are affected by the proposed scheme is presented in Table 4.1.

**Table 4.1 : Summary of overall scores for evaluation of relative importance and grade of overall value of each HLCA**

| HLCA | Average Values | | | Equation | Overall Score |
|---|---|---|---|---|---|
| | (a) | (b) | (c) | | |
| HLCA 012: Cyfarthfa Iron Works | 72.72 | 63.63 | 61.81 | (72.72 + 63.63 + 61.81) ÷ 3 = 66.05 (66) | High |
| HLCA 035: Pengarnddu | 56.36 | 43.63 | 36.36 | (56.36 + 43.63 + 36.36) ÷ 3 = 45.45 (45) | Considerable |
| HLCA 052: Gurnos Farm and Bunker's Hill | 58.18 | 52.72 | 52.72 | (58.18 + 52.72 + 52.72) ÷ 3 = 54.54 (55) | Considerable |
| HLCA 053: Y Graig, Gurnos | 38.18 | 45.45 | 34.54 | (38.18 + 45.45 + 34.54) ÷ 3 = 39.39 (39) | Moderate |
| HLCA 055: Cefn Coed-y-Cymmer | 80 | 74.54 | 72.72 | (80 + 74.54 + 72.72) ÷ 3 = 75.75 (76) | High |
| HLCA 061: Taf Fawr River Valley | 81.81 | 72.72 | 72.72 | (81.81 + 72.72 + 72.72) ÷ 3 = 75.75 (76) | High |
| HLCA 062: Coed Meurig | 58.18 | 54.54 | 52.72 | (58.18 + 54.54 + 52.72) ÷ 3 = 55.14 (55) | Considerable |

## 4.1 Assessment of Value

Merthyr Tydfil Registered Historic Landscape is a fragmented industrial landscape with elements dating from the 17th to 19th centuries. The landscape comprises HLCAs ranging in value from Moderate to High in relation to the entire landscape on the Register as well as in a national context. HLCA 012: Cyfarthfa Iron Works, HLCA 055 Cefn Coed-y-Cymmer and HLCA 061: Taf Fawr River Valley, have been assessed to be of High value, HLCA 035: Pengarnddu, HLCA 052: Gurnos Farm and Bunker's Hill and HLCA 062: Coed Meurig have been assessed to be of Considerable value whilst HLCA 053: Y Graig, Gurnos has been assessed to be of Moderate value.

# 5. Stage 5: Assessment of Overall Significance of Impact

Stage 5 combines the results of assessment undertaken during Stages 2 to 4. Stage 5 assesses the overall significance of the impact of the proposed scheme and the effect of it on the overall historic landscape area as recorded on the Register.

Overall significance is established through a scoring of the value of each HLCA affected in relation to the effect of the proposed scheme and the consequent reduction in value of the historic landscape area as recorded on the Register.

Table 5.1 presents an assessment of the value of each HLCA, the predicted impact of the proposed development on them and consequential reduction of the value of each HLCA on the register, whilst the full assessment is provided in Annex 6. Table 5.1 also presents the overall significance of impact the proposed scheme would have on each HLCA. The significance of impact has been determined with consideration of the value of the HLCA, the level of impact of the proposed scheme would have on the HLCA and the predicted reduction of the value of the HLCA due to that impact.

**Table 5.1 : Value of and impact on HLCA as a result of the proposed development**

| HLCA | Value of HLCA | Impact of development | Reduction of Value of the HLCA on Register | Total Score for historic landscape character |
|---|---|---|---|---|
| HLCA 007: Dowlais | None | Medium – 5 | Low – 3 | Slight |
| HLCA 012: Cyfarthfa Iron Works | High – 7 | Low – 3 | Low – 2 | Moderate |
| HLCA 027: Taf Fechan | None | Very Low – 1 | Very Low – 1 | Very Slight |
| HLCA 030: Pantcadifor, Rhyd-y-Bedd and Caeracca | None | Medium – 4 | Low – 2 | Slight |
| HLCA 035: Pengarnddu | Medium – 6 | Medium – 4 | Medium – 4 | Moderate |
| HLCA 046: Bryniau Quarries | None | Medium – 4 | Medium – 4 | Slight |
| HLCA 047: Dowlais Top | None | Very Low – 1 | Very Low – 1 | Very Slight |
| HLCA 049: Bon-y-Maen | None | Medium – 4 | Low – 2 | Slight |
| HLCA 050: Gurnos and Galon Uchaf | None | Low – 2 | Low – 2 | Slight |
| HLCA 052: Gurnos Farm and Bunker's Hill | Medium – 5 | Medium – 5 | Medium – 4 | Moderate |
| HLCA 053: Y Graig, Gurnos | Medium – 4 | Medium – 6 | Low – 3 | Moderate |
| HLCA 055: Cefn Coed-y-Cymmer | High – 7 | Medium – 4 | Medium – 4 | Moderate |
| HLCA 061: Taf Fawr River Valley | Medium – 5 | Medium – 6 | Medium – 4 | Moderate |
| HLCA 062: Coed Meurig | Medium – 6 | Medium – 4 | Medium – 4 | Moderate |
| HLCA 078: Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun | None | Low – 3 | Very Low - 1 | Slight |

## 5.1 Mitigation

Landscape survey work would provide a descriptive and interpretative record of the relevant landscape, producing an analysis of its development and use. Level 1 is a basic visual record of the location, date, type and condition of the historic landscape in question. It comprises a written account and drawing and will be informed by consultation of readily available documentary information. Level 2 is a more detailed investigation than Level 1. It

comprises a descriptive and interpretative record of the historic landscape in question and its wider historic landscape, based on photographic, documentary and cartographic research.

The mitigation measures presented below will provide a record of the landscape associated with the Cefn Coed Cemetery and Jewish Burial Ground Grade II Registered Park and Garden (Asset 134) in advance of construction.

The following measures are proposed for impacts predicted to result from construction:

- a Level 1 landscape survey (English Heritage, 2007); and
- a Level 2 landscape survey (English Heritage, 2007).

The following measures are proposed for impacts predicted to result from operation (please refer to ES Chapter 5: Proposed Scheme Description):

- sympathetic building materials and design; and
- landscaping and screen planting.

In addition, mitigation for individual heritage assets is provided within ES Chapter 9: Cultural Heritage on a case by case basis.

# 6. Concluding Statement

The proposed scheme comprises online dualling of the existing A465 between Hirwaun and Dowlais Top, with some off-line elements at the Hirwaun end. The A465 runs east to west and bisects the northern half of the MTLOHI. The MTLOHI comprises 79 distinct HLCAs, the majority of which have a connection to the extractive and mineral processing industries prevalent in the area from the late eighteenth to the early twentieth centuries. It is this industrial heritage that gives the MTLOHI its distinctive character.

Assessment has identified 15 HLCAs that would experience direct physical impacts as a result of construction of the proposed scheme. The same 15 HLCAs would also experience an indirect (non-physical) visual impact as a result of operation of the proposed scheme. The relative importance of impacted areas of the HLCAs within the overall MTLOHI has been assessed to be Low overall.

This assessment has established that the proposed scheme would have an impact on six industrial landscapes including:

- a former iron works site (HLCA 012);
- a former quarry area (HLCA 046);
- two areas of reclaimed industrial land (HLCA 047 and HLCA 078); and
- two modern urban/industrial estates (HLCA 049 and HLCA50).

The proposed scheme will also have an impact on other HLCAs types including residential settlements or agricultural fields, however these are not essential to the distinctive industrial character of MTLOHI.

The overall impact of the development on the historic landscape on the Register has been assessed using professional judgement and in consideration of the following:

- Assessment has identified overall impacts as follows: Moderate impacts on seven HLCAs, Slight impacts on six HLCAs and Very Slight impacts on the two remaining HLCAs.
- Of the HLCAs, the proposed scheme would only have an impact on two industrial historic landscapes within the MTLOHI. This concerns:
    - HLCA 012: Cyfarthfa Iron Works (which includes a Scheduled Monument (Asset 78)) on which a Moderate impact is predicted to occur; and
    - HLCA 046: Bryniau Quarries, a former quarry area on which a Slight impact is predicted to occur;
- The proposed scheme would be seen in the context of the existing A465. While new elements of infrastructure would be visible from 15 of the 79 HLCAs comprising the historic landscape on the register, this would not:
    - impact on visual connections between related elements within the historic landscape on the Register or those within individual HLCA;
    - create inappropriate visual connections between elements; or
    - visually intrude or encroach on the historic landscape on the Register.

The proposed scheme will have a direct physical impact on 0.03 ha of the Gurnos Tramway and Leat Scheduled Monument (Asset 78), which is a key characteristic of HLCA 012, comprising the physical removal of woodland and scrub within the scheduled area. The proposed widening of the Taf Fechan overbridge has been designed to minimise impact on the Gurnos Tramway and Leat Scheduled Monument (Asset 78). Furthermore, the loss or damage to landscape features such as mature trees has been avoided where possible.

The proposed scheme would not have any direct physical impacts on any Listed Buildings within the HLCAs, however it will have an indirect visual impact on a Grade II* Listed Building, Cefn Railway Viaduct, Merthyr Tydfil (Asset 61), a key characteristic of HLCA 055, as result of the introduction of the bridge and supports within its essential setting. The development has been designed to minimise the indirect visual impacts that will occur on (Asset 61) within HLCA 055 (further information is provided in ES Chapter 9: Cultural Heritage.

The proposed scheme will encroach on the southern area of the Grade II Registered Park and Garden Cefn Coed Cemetery (0.4 ha (2.33%)) (Asset 134). Thus the proposed scheme would have a direct physical on the Registered Park and Garden as it will involve the removal of woodland and open field elements within the park and garden area. The proposed scheme would also have an indirect, visual impact on Asset 134 as the development would result in visual intrusion on the essential setting of the Park and Garden within the HLCA with the introduction of the bridge and supports.

Overall, the proposed scheme would have an impact on the historic landscape on the Register in such a way there would be a measureable reduction in appreciation of its significance. However, this reduction is not considered to be significant, in the context of the whole entirety of the MTLOHI.

# Annex 1 The Citation of the Merthyr Tydfil Landscape of Outstanding Historic Interest (MTLOHI) in the Register (Cadw, 1998)

Merthyr Tydfil occupies a natural basin at the head of the Taf Valley. High hills and ridges reach 450 m above OD on all sides, with development constrained to the basin floor and smaller tributary valleys of the Taf, which itself provides the only natural route out of the basin to the south east. However, it is not topography alone that has shaped the town, but the mineral resources contained within its hinterland. It was probably the largest iron-making town in the world in the early to mid-1900s, with an output calculated to be a quarter of that of the entire United States of America. The town, and its associated landscape, was rapidly transformed from a modest village in the 1750s to the largest town in Wales by 1801.

Despite extensive recent land reclamation and the sanitisation of the surrounding waste tips, overall Merthyr still retains its industrial landscape character as the most significant Welsh town of the Industrial Revolution. The town and its environs remain a potent example of an internationally renowned industrial landscape of the 18th and 19th centuries and a permanent reminder of man's exploitation of the landscape.

The primarily late 18th to 19th centuries landscape comprises numerous relict elements and foci set within the present landscape. These individual elements consist of the remains of large ironworks, remnants of the associated coal mining industry, water power leats, an early iron bridge, communication systems, including early tramroads, tips, terraced industrial housing, and the ironmasters house, Cyfarthfa Castle. Merthyr Tydfil, however, retains not only its economic significance, but also its importance as a religious, literary and political centre.

The area identified here contains many and diverse elements, which include Merthyr's Dowlais Ironworks, established in 1759, and probably the first such works to use coke in South Wales. It was followed by the foundation of other ironworks such as Plymouth in 1763, Cyfarthfa in 1765 and Penydarren in 1784. Other subsidiary works were created in the early 19th century at Ynysfach by Cyfarthfa, Ivor by Dowlais, Dyffryn by Plymouth, with further forges at Pentrebach, a part of Plymouth.

Surviving remains include the renowned furnace bank at the Cyfarthfa Ironworks, where six out of its seven late 18th century blast-furnaces, and its ranges of calcining kilns, survive substantially intact. At the Dowlais Ironworks the remains include the great stables and the blast-engine house, which have been restored. The remains of the Ynysfach Ironworks consist of one blast engine house and four early 19th century furnaces. The engine house is also restored and acts as a museum of the iron industry.

Locally, early communication systems survive, though to varying degrees. Adjoining the Cyfarthfa Ironworks lies the Pontycafnau bridge built in 1793, and the first ever iron railway bridge to be built. The bridge has added significance in that it had a combined use as an aqueduct. The Gurnos tramroad which used the Pontycafnau bridge carried limestone from the Gurnos quarries and exists today as a scenic footpath retaining its stone sleeper blocks. The remains of limekilns and fulling mills survive on either side of the route. Elsewhere, the line of the Penydarren tramroad, built in 1802 to carry iron by horse-drawn tram, survives and is also historically significant as the route of the first steam-hauled railway journey by Richard Trevithick's 1804 locomotive. The tramroad also includes a tunnel constructed under the Plymouth Ironworks.

Short sections of the famous Glamorganshire Canal, built in the 1790s, also survive as important landscape features, including a restored section in front of Chapel Row. This is crossed by the relocated Rhydycar bridge which is an early iron girder bridge dating from the 1790s. Chapel Row itself was built by the Cyfarthfa Iron Company as workers' houses, one of which is restored, both as an example of a period ironworker's cottage and also as the birthplace of the renowned composer Dr Joseph Parry. In a sharp distinction which reflects the other social extreme of the Merthyr ironmasters' activities, Cyfarthfa Castle, overlooking the Cyfarthfa Ironworks, was the largest and grandest ironmaster's house in Merthyr Tydfil, and amongst the most notable surviving industrialist's house in Wales. The house is situated in 64 ha of grounds, which were landscaped by the Crawshay family to include woodlands and a lake. This grand house and its parkland setting also provide an interesting and important contrast to the other relict landscape features of Merthyr.

# Annex 2 Legislative and Policy Background

| Legislation or policy | Relevant points |
|---|---|
| Ancient Monuments and Archaeological Areas Act 1979 | Scheduled Monuments are, by definition, of national importance and are protected by law under the Ancient Monuments and Archaeological Areas Act 1979. It is a criminal offence to damage a Scheduled Monument and Scheduled Monument Consent must be obtained from the Secretary of State for Culture, Media and Sport before any works affecting a Scheduled Monument may take place. |
| Circular 60 / 96 Planning and the Historic Environment: Archaeology (Welsh Government, 1996a) | Where nationally important designated or undesignated archaeological remains are likely to be affected by a proposed development there should be a presumption in favour of their preservation in situ. Remains of local or regional importance may also be worthy of preservation in situ or, alternatively, preservation by record. |
| Circular 61 / 96 Planning and the Historic Environment: Historic Buildings and Conservation Areas (Welsh Government, 1996b) | A central objective of central government policy is to secure the preservation of Listed Buildings and any features of special architectural or historic interest which they might possess. |
| Historic Environment (Wales) Act, 2016 | An Act of the National Assembly of Wales to make provision amending certain aspects of the law relating to scheduled monuments and Listed Buildings; to establish a Register of Historic Parks and Gardens; to require local planning authorities to establish historic environment records relating to their areas; to establish an Advisory Panel for the Welsh Historic Environment; and for connected purposes. |
| Planning (Listed Buildings and Conservation Areas) Act 1990 | Planning authorities are required to have special regard to the desirability of preserving a Listed Building, its setting or any features of special architectural or historic interest which it may possess. Designation as a Listed Building provides planning authorities with additional controls over the demolition and alteration of historic buildings through the process of gaining Listed Building Consent (LBC). |
| Planning Policy Wales Edition 9 (PPW) (Welsh Assembly Government December 2016) | Local authorities to consider protection of the historic environment in decision-making and in the preparation of their plans and strategies. |
| Technical Advice Note (Wales) 12: Design (Welsh Government, 2014) | The setting and views of historic buildings, parks and gardens and archaeological sites should be considered during the planning process and the design of a development of a proposed scheme and, if necessary, how setting and views should be protected. |
| The Highways Act 1980 | The Highways Act 1980 is an Act of the Parliament dealing with the management and operation of the road network in England and Wales. It consolidates (with amendments) several earlier pieces of legislation. |
| The Planning (Listed Buildings and Conservation Areas (Wales) Regulations 2012 and Amendment 2017 | Planning authorities are required to have special regard to the desirability of preserving a Listed Building, its setting or any features of special architectural or historic interest which it may possess. Designation as a Listed Building provides planning authorities with additional controls over the demolition and alteration of historic buildings through the process of gaining Listed Building Consent (LBC). |
| Wales Spatial Plan (Welsh Assembly Government, 2008) | The Wales Spatial Plan (WSP) sets out to ensure that planning proposals throughout Wales are integrated, sustainable and made in compliance with the shared vision described in the WSP for managing change in the historic environment. |

| Legislation or policy | Relevant points |
|---|---|
| Planning Policy Wales Technical Advice Note (Wales) 24: The Historic Environment (Welsh Government, 2017) | Provides guidance on how Planning Authorities should consider the historic environment during the preparation of development plans and guide their decisions on planning applications and Listed Building Consent applications. |
| Rhondda Cynon Taf County Borough Council Local Development Plan up to 2021 (LDP) (Adopted March 2011) (RCTCBC, 2011) | Policy CS 1: Development in the North<br>In the Northern Strategy Area the emphasis will be on building strong, sustainable communities. This will be achieved by:-<br>1. Promoting residential and commercial development in locations which will support and reinforce the roles of Principal Towns and Key Settlements;<br>2. Providing high quality, affordable accommodation that promotes diversity in the residential market;<br>3. Ensuring the removal and remediation of dereliction by promoting the re-use of under used and previously developed land and buildings;<br>4. Promoting large scale regeneration schemes in the Principal Town of Aberdare and in the Key Settlements of Mountain Ash, Ferndale and Treorchy;<br>5. Promoting accessibility by securing investment in new roads, public transport improvements, walking and cycling;<br>6. Encouraging a strong, diverse economy which supports traditional employment and promotes new forms of employment in the leisure and tourism sectors;<br>7. Protecting the cultural identity of the Strategy Area by protecting historic built heritage and the natural environment,<br>8. Promoting and enhancing transport infrastructure services to support growth and investment, and<br>9. Reducing daily out commuting by private car and promoting sustainable forms of travel.<br>Policy EB101: The Historic Built Environment (SPG) 2010<br>This Supplementary Planning Guidance (SPG) gives detailed guidance to owners and occupiers of land and buildings within the historic built environment, and anyone wishing to develop within it or make alterations to it, and is a material consideration in the determination of relevant planning applications. |
| Merthyr Tydfil County Borough Council Local Development Plan 2006-2021 (LDP) (Adopted May 2011) (MTCBC, 2011) | *Strategic Objective 11*<br>To ensure the continued protection and enhancement of the natural, cultural, built and historic environment.<br>*Policy BW6: Townscape and Built Heritage*<br>The Council will protect and support the enhancement of the unique built heritage of the County Borough. Development proposals will only be permitted where it can be demonstrated they would preserve or enhance the architectural quality, character and setting of any of the following:<br>1. Listed Buildings;<br>2. Scheduled Ancient Monuments;<br>3. Conservation Areas;<br>4. Registered Historic Parks and Gardens of Special Historic Interest;<br>5. townscape character and the local distinctiveness of settlements; and<br>6. other historic, archaeological and cultural features of acknowledged importance. |

| Legislation or policy | Relevant points |
|---|---|
| | Policy AS4: Historic Landscape<br>There will be a presumption in favour of the protection, conservation and enhancement of:<br>1. Gelligaer Common, and<br>2. the main settlement of Merthyr Tydfil in accord with their status as landscapes of Historic Interest in Wales.<br>The extent of these areas is shown on the LDP Proposals Map and proposals for development will only be permitted where they would maintain or enhance the character and integrity of the landscape. |

# Annex 3 The results of Stage 2: Assessment of direct, physical impacts of development

**HLCA 007: Dowlais**

Dowlais initially began as a settlement of dispersed cottages dating to the 1700s, although it has expanded and its layout has changed from a characteristic grid system by the mid-1800s to the wider expansive development seen today. The area is characterised by industrial housing which is still extant, but it is also dominated by public and religious buildings, such as the Dowlais Ironworks Stables and the Memorial Library. This HLCA encompasses areas from Bryniau Road in the west (chainage 13900) to High Street in the east (chainage 16000).

**Plate 1. HLCA 007: Dowlais (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 007 are presented in Table A3.1. The overall magnitude of these impacts is presented in Table A3.2.

**Table A3.1 : Direct physical impacts on HLCA 007: Dowlais**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>3.4 ha of 91 ha = 3.74% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Open fields.<br>0.2 ha would be permanently removed<br>(0.22% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Slightly Reduced = 2 |
| Scrub and woodland.<br>3.2 ha would be permanently removed<br>(3.52% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 3.74% of the overall HLCA would be permanently lost or removed by development, this includes the removal of 0.22% of open fields and 3.52% of scrub and woodland. | | | | |

**Table A3.2 : Overall magnitude of direct physical impacts on HLCA 007: Dowlais**

| **Score** | **Grading** |
|---|---|
| (1 + 1 + 1 + 2) + (1 + 1 + 1 + 1) ÷ 2 + 1 = 5.5 (6) | Slight |

**HLCA 012 : Cyfarthfa Iron Works**

Founded in 1765, the Cyfarthfa Iron Works became one of the largest iron works in the world during the early 1800s. It is recognised as a nationally and internationally important landscape which is characterised by industrial features such as the Charging Bank and Blast Furnaces (Plate 2), Pont-y-Cafnau Iron Bridge, Cyfarthfa Cinder Tips, and the limestone quarry and associated tram road. This HLCA encompasses an area to the north and south of the existing A465 east of Lower Vaynor Road (between chainage 11400 to 11500). The area of the HLCA included within the working footprint of the proposed scheme comprises an existing bridge within the HLCA over the Afon Taf Fechan and woodland and scrub either side of the Taf Fechan. The area of woodland and scrub is located within a Scheduled Monument (Gyrnos Tramway and Leat (Asset 78)) and a Conservation Area (Cyfarthfa Conservation Area, Merthyr Tydfil (Asset 64)) (see Figure 1). Gyrnos Tramway and Leat is a key characteristic of HLCA 012.

**Plate 2. HLCA 012: Cyfarthfa Iron Works (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 012 are presented in Table A3.3. The overall magnitude of these impacts is presented in Table A3.4.

**Table A3.3 : Direct physical impacts on HLCA 012: Cyfarthfa Iron Works**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>0.3 ha of 60 ha = 0.50% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Woodland Plantation.<br>0.17 ha would be permanently removed<br>(0.28% of HLCA) | D = 1 | Very Slight = 1 | Low = 2 | Slightly Reduced = 2 |
| Scrub and woodland.<br>0.1 ha would be permanently removed<br>(0.17% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Slightly Reduced = 2 |

| Direct physical impacts – relative | | | | |
|---|---|---|---|---|
| Woodland within Scheduled Monument Area.<br>0.03ha would be permanently removed<br>(0.05% of the HLCA) | A = 4 | Very Slight = 1 | Low = 2 | Slightly Reduced = 2 |
| **Summary:** 0.50% of the overall HLCA would be permanently lost or removed by the development, comprising the removal of 0.28% of woodland plantation and 0.17% of scrub and woodland and 0.05% of woodland within the Scheduled Monument area (Asset 78). | | | | |

**Table A3.4 : Overall magnitude of direct physical impacts on HLCA 012: Cyfarthfa Iron Works**

| Score | Grading |
|---|---|
| (1 + 1 + 2 + 2) + (1 + 1 + 1 + 2) + (4 + 1 + 2 + 2) ÷ 3 + 1 = 7.66 (8) | Slight |

**HLCA 027 : Taf Fechan**

Taf Fechan comprises a transport corridor within the Taf Fechan Valley which is characterised by 19th century public rail networks, including the B&M/LNWR Joint Railway and the Glais Viaduct at Pontsarn. This HLCA encompasses two areas to the north of the existing A465 (at chainage 11400). The eastern area is located to the west of Gurnos Farm and the western area is located to the north of Lower Vaynor Road.

**Plate 3. HLCA 027: Taf Fechan (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 027 are presented in Table A3.5. The overall magnitude of these impacts is presented in Table A3.6.

**Table A3.5 : Direct physical impacts on HLCA 027: Taf Fechan**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>0.31 ha of 160 ha = 0.194% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>0.3 ha would be permanently removed<br>(0.188% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.01 ha would be permanently removed / altered<br>(0.006% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 0.194% of the overall HLCA would be permanently lost or removed by the development, comprising the removal of 0.188% scrub and woodland and 0.006% of existing roads / tracks would be affected. | | | | |

**Table A3.6 : Overall magnitude of direct physical impacts on HLCA 027: Taf Fechan**

| **Score** | **Grading** |
|---|---|
| (1 + 1 + 1 + 1) + (1 + 1 + 1+ 1) ÷ 2 + 1 = 5 | Slight |

### HLCA 030 : Pantcadifor, Rhyd-y-Bedd and Caeracca

Pantcadifor, Rhyd-y-Bedd and Caeracca is a roadside settlement dating from the late 1700s and was formerly associated with local quarries within the area. The area is characterised by later regular terrace houses, 20th century social housing, a large cemetery and two chapels. This HLCA encompasses areas to the north of the existing A465 between Pant Road in the west (chainage 14700) to the Hafod in the east (chainage 15100).

**Plate 4. HLCA 030 Pantcadifor, Rhyd-y-Bedd and Caeracca (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 030 are presented in Table A3.7. The overall magnitude of these impacts is presented in Table A3.8.

**Table A3.7 : Direct physical impacts on HLCA 030: Pantcadifor, Rhyd-y-Bedd and Caeracca**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>1.7 ha of 67 ha = 2.55% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Open fields.<br>0.5 ha would be permanently removed<br>(0.75% of HLCA) | C = 2 | Very Slight = 1 | Very Low = 1 | Slightly Reduced = 2 |
| Scrub and woodland.<br>0.5 ha would be permanently removed<br>(0.75% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Modern hardstanding.<br>0.2 ha would be permanently removed<br>(0.30% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.5 ha would be permanently removed / altered<br>(0.75% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 2.55% of the overall HLCA would be permanently lost or removed by development, this includes the removal of 0.75% of open fields and scrub and woodland, 0.30% of modern hardstanding and 0.75% of existing roads / tracks would be affected. | | | | |

**Table A3.8 : Overall magnitude of direct physical impacts on HLCA 030: Pantcadifor, Rhyd-y-Bedd and Caeracca**

| **Score** | **Grading** |
|---|---|
| (2 + 1 + 1 + 2) + (1 + 1 + 1 + 1) + (1 + 1 + 1 + 1) + (1 + 1 + 1 + 1) ÷ 4 + 1 = 5.5 (6) | Slight |

**HLCA 035 : Pengarnddu**

The landscape of Pengarnddu is characterised by a transport corridor associated with the limestone quarries at Twynau Gwynion. The landscape also comprises extensive remains of the Dowlais Free Drainage System which comprises a system of reservoirs and leats which formerly provided water to the Dowlais Ironworks and pre-date the early 1800s. This HLCA encompasses areas to the north of the existing A465 between High Street in the east (chainage 16000) to the Hafod in the west (chainage 15100).

**Plate 5. HLCA 035: Pengarnddu (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 035 are presented in Table A3.9. The overall magnitude of these impacts is presented in Table A3.10.

**Table A3.9 : Direct physical impacts on HLCA 035: Pengarnddu**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>4.66 ha of 88 ha = 5.29% of HLCA | | Magnitude & Score:<br>Slight = 2 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Open fields.<br>3.38 ha would be permanently removed<br>(3.84% of HLCA) | C = 2 | Very Slight = 1 | Low = 2 | Slightly Reduced = 2 |
| Scrub and woodland.<br>1.28 ha would be permanently removed<br>(1.45% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 5.29% of the overall HLCA would be permanently lost or removed by development, this includes the removal of 3.84% of open fields and 1.45% of scrub and woodland. | | | | |

**Table A3.10 : Overall magnitude of direct physical impacts on HLCA 035: Pengarnddu**

| **Score** | **Grading** |
|---|---|
| (2 + 1 + 2 + 2) + (1 + 1 + 1 + 1) ÷ 2 + 2 = 7.5 (8) | Slight |

**HLCA 046 : Bryniau Quarries**

Bryniau Quarries is a historical extractive industrial landscape, associated with Dowlais and Ivor Iron Works and is characterised by quarries and associated tramroads. This HLCA encompasses areas to the north and south of the existing A465 between Rocky Road in the west (chainage 14100) and High Street in the east (chainage 16000).

**Plate 6. HLCA 046: Bryniau Quarries (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 046 are presented in Table A3.11. The overall magnitude of these impacts is presented in Table A3.12.

**Table A3.11 : Direct physical impacts on HLCA 046: Bryniau Quarries**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>1.10 ha of 20 ha = 5.50% of HLCA | | Magnitude & Score:<br>Slight = 2 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Former quarry area.<br>0.8 ha would be permanently removed<br>(4% of HLCA) | C = 2 | Very Slight = 1 | Very Low = 1 | Moderately Reduced = 3 |
| Scrub and woodland.<br>0.02 ha would be permanently removed<br>(0.10% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.28 ha would be permanently removed / altered<br>(1.40% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 5.50% of the overall HLCA would be permanently lost or removed by development, this includes the removal of 4% of the area within the former quarry area, 0.10% of scrub and woodland and 1.40% of existing roads / tracks would be affected. | | | | |

**Table A3.12 : Overall magnitude of direct physical impacts on HLCA 046: Bryniau Quarries**

| **Score** | **Grading** |
|---|---|
| (2 + 1 + 1 + 3) + (1 + 1 + 1 + 1) + (1 + 1 + 1 + 1) ÷ 3 + 2 = 7 | Slight |

**HLCA 047 : Dowlais Top**

Dowlais Top comprises reclaimed industrial land which has been redeveloped and is characterised by modern buildings such as commercial, retail and light industry units. This HLCA encompasses areas to the north and south of the existing A465 between chainage 15200 and 16000.

**Plate 7. HLCA 047: Dowlais Top (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 047 are presented in Table A3.13. The overall magnitude of these impacts is presented in Table A3.14.

**Table A3.13 : Direct physical impacts on HLCA 047: Dowlais Top**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>0.17 ha of 49 ha = 0.35% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>0.12 ha would be permanently removed<br>(0.25% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.05 ha would be permanently removed / altered<br>(0.10% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 0.35% of the overall HLCA would be permanently lost or removed by development, this includes the removal of 0.25% of scrub and woodland and 0.10% of existing tracks and roads. | | | | |

**Table A3.14 : Overall magnitude of direct physical impacts on HLCA 047: Dowlais Top**

| **Score** | **Grading** |
|---|---|
| (1 + 1 + 1 + 1) + (1 + 1+ 1 + 1) ÷ 2 + 1 = 5 | Slight |

**HLCA 049 : Bon-y-Maen**

Bon-y-Maen was formerly post-medieval farmland with irregular fields, but is now a modern industrial estate, comprising mixed industrial and commercial units and a sports ground. This HLCA encompasses areas to the south of the existing A465 between Rocky Road to the west (chainage 14100) and Pant Road in the east (chainage 14700).

**Plate 8. HLCA 049: Bon-y-Maen (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 049 are presented in Table A3.15. The overall magnitude of these impacts is presented in Table A3.16.

**Table A3.15 : Direct physical impacts on HLCA 049: Bon-y-Maen**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>3.3 ha of 28 ha = 11.79% of HLCA | | Magnitude & Score:<br>Slight = 2 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>1.7 ha would be permanently removed<br>(6.07% of HLCA) | D = 1 | Slight = 2 | Very Low = 1 | Very Slightly Reduced = 1 |
| Modern hardstanding.<br>0.8 ha would be permanently removed<br>(2.86% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.8 ha would be permanently removed / altered<br>(2.86% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 11.79% of the overall HLCA would be permanently lost or removed by development, including 6.07 % of scrub and woodland, 2.86% of modern hardstanding and 2.86 % of existing roads / tracks would be affected. | | | | |

**Table A3.16 : Overall magnitude of direct physical impacts on HLCA 049: Bon-y-Maen**

| **Score** | **Grading** |
|---|---|
| (1 + 2 + 1 + 1) + (1 + 1 + 1 + 1) + (1 + 1 + 1 + 1) ÷ 3 + 2 = 6.33 (6) | Slight |

**HLCA 050 : Gurnos and Galon Uchaf**

Gurnos and Galon Uchaf is an existing urban landscape, built on former agricultural land during the mid-1900s. The landscape is characterised by council housing estates, commercial buildings, educational and health facilities, and industrial features. This HLCA encompasses areas to the south of the existing A465 between Gurnos Road in the west (at chainage 11500) to Pontsarn Road in the east (at chainage 13800).

**Plate 9. HLCA 050: Gurnos and Galon Uchaf (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 050 are presented in Table A3.17. The overall magnitude of these impacts is presented in Table A3.18.

**Table A3.17 : Direct physical impacts on HLCA 050: Gurnos and Galon Uchaf**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>4.4 ha of 199 ha = 2.21% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>1.4 ha would be permanently removed<br>(0.7% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>3 ha would be permanently removed/altered<br>(1.51% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 2.21% of the overall HLCA would be permanently lost or removed by development, including the removal of 0.7% of scrub and woodland and 1.51% of existing roads / tracks would be affected. | | | | |

**Table A3.18 : Overall magnitude of direct physical impacts on HLCA 050: Gurnos and Galon Uchaf**

| **Score** | **Grading** |
|---|---|
| (1 + 1 + 1 + 1) + (1 + 1 + 1 + 1) ÷ 2 + 1 = 5 | Slight |

### HLCA 052 : Gurnos Farm and Bunker's Hill

Gurnos Farm and Bunkers Hill comprises a late-18th century agricultural landscape characterised predominantly by planned medium / large regular enclosures with drystone walls. It also includes a transport corridor comprising a tramroad to Morlais Castle Quarries and a possible route of a Roman road. This HLCA encompasses areas to the north of the existing A465 between Lakeside Gardens in the west (chainage 11500) to Pontsarn Road in the east (chainage 13800).

**Plate 10. HLCA 052: Gurnos Farm and Bunker's Hill (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 052 are presented in Table A3.19. The overall magnitude of these impacts is presented in Table A3.20.

**Table A3.19 : Direct physical impacts on HLCA 052: Gurnos Farm and Bunker's Hill**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>8.9 ha of 80ha = 11.14 % of HLCA | | Magnitude & Score: Slight = 2 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Woodland Plantation.<br>0.7 ha would be permanently removed<br>(0.88% of HLCA) | C = 2 | Very Slight = 1 | Low = 2 | Moderately Reduced = 3 |
| Open fields.<br>7.1 ha would be permanently removed<br>(8.88% of HLCA) | C = 2 | Slight = 2 | Low = 2 | Moderately Reduced = 3 |
| Scrub and woodland.<br>0.3 ha would be permanently removed<br>(0.38% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Slightly Reduced = 2 |

| **Direct physical impacts – relative** | | | | |
| **Summary:** 11.14% of the overall HLCA would be permanently lost or removed, this includes 0.88% of woodland plantation, 8.88% open fields, 0.38% of scrub and woodland and 1% of existing roads / tracks. | | | | |

**Table A3.20 : Overall magnitude of direct physical impacts on HLCA 052: Gurnos Farm and Bunker's Hill**

| **Score** | **Grading** |
|---|---|
| (2 + 1 + 2 + 3) + (2 + 2 + 2 + 3) + (1 + 1 + 1 + 2) + (1 + 1 + 1 + 1) ÷ 4 + 2 = 8.5 (9) | Moderate |

**HLCA 053 : Y Graig, Gurnos**

Y Graig, Gurnos comprises a remnant of land associated with Gurnos Farm to the south of the existing A465 at Gurnos. Characterised by scrub woodland and pasture, HLCA 053 also contains a network of tracks and a small number of minor extractive features, possibly gravel pits. This HLCA encompasses areas to the south of the existing A465 between the Taf Fechan in the west (at chainage 11500) and to the north of Ty Gwaunfarren in the east (chainage 12100). The areas of the HLCA included within the working footprint of the proposed scheme, comprises tracks, scrub and woodland.

**Plate 11: HLCA 053: Y Graig, Gurnos (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 053 are presented in Table A3.21. The overall magnitude of these impacts is presented in Table A3.22.

**Table A3.21 : Direct physical impacts on HLCA 053: Y Graig, Gurnos**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>5.3 ha of 19 ha = 27.89% of HLCA | | Magnitude and Score:<br>Moderate = 3 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Tracks. 1.3 ha would be permanently removed. 6.84% of HLCA) | D = 1 | Slight = 2 | Low = 2 | Moderately Reduced = 3 |
| Open fields.<br>1.6ha would be permanently removed<br>(8.42% of HLCA) | C = 2 | Slight = 2 | Low = 2 | Moderately Reduced = 3 |
| Scrub and woodland. 2.4ha would be permanently removed (12.63% of HLCA) | U = 1 | Slight = 2 | Low = 2 | Moderately Reduced = 3 |
| **Summary:** 27.89% of the overall HLCA would be permanently lost or removed by development. Tracks comprising 6.84% of the HLCA, open fields comprising 8.42% and scrub and open woodland comprising 12.63% of the HLCA would be permanently lost or removed by development. | | | | |

**Table A3.22 : Overall magnitude of direct physical impacts on HLCA 053: Y Graig, Gurnos**

| Score | Grading |
|---|---|
| (1 + 2 + 2 + 3) + (2 + 2 + 2 + 3) + (1 + 2 + 2 + 3) ÷ 3 + 3 = 11.33 (11) | Moderate |

### HLCA 055 : Cefn Coed-y-Cymmer

Cefn Coed-y-Cymmer is an industrial worker's squatter settlement which has retained its identity, despite the 20th century developments that have taken place around it. The HLCA is characterised by an unplanned layout, comprising early housing with a strong vernacular influence and non-conformist chapels of both rural and urban type and includes the transport corridor elements such as the turnpike road from Cefn to Cwm Taf, the Brecon-Merthyr road and Cefn Coed-y-Cymmer railway viaduct. This HLCA encompasses areas either side of the A465 between Lower Vaynor Road Merthyr Road (chainage 11400), to the Taf Trail in the west (chainage 10900).

**Plate 12. HLCA 055: Cefn Coed-y-Cymmer (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 055 are presented in Table A3.23. The overall magnitude of these impacts is presented in Table A3.24.

**Table A3.23 : Direct physical impacts on HLCA 055: Cefn Coed-y-Cymmer**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>1 ha of 50 ha = 2% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>0.6 ha would be permanently removed<br>(1.20% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.4 ha would be permanently removed / altered<br>(0.80% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 2% of the overall HLCA would be permanently lost or removed by development, including the removal of 1.20% of scrub and woodland and 0.80% of existing roads / tracks would be affected. | | | | |

**Table A3.24 : Overall magnitude of direct physical impacts on HLCA 055: Cefn Coed-y-Cymmer**

| Score | Grading |
|---|---|
| (1 + 1 + 1 + 1) + (1 +1 + 1 + 1) ÷ 2 + 1 = 5 | Slight |

**HLCA 061 : Taf Fawr River Valley**

HLCA 061, Taf Fawr River Valley comprises a religious and ritualistic landscape established for burial purposes and is characterised, at its northern limit, by the Cefn Coed Cemetery created in 1858, which included the laying out of the ground, and erection of chapels, lodge and boundary wall. By 1919, the cemetery had expanded to take in an area to the west side of the Taf, linked by a bridge. Cefn Coed cemetery is recorded as one of the oldest and largest general public cemeteries in the Merthyr Tydfil area. The majority of the HLCA area survives in its entirety in its original layout.

This HLCA encompasses areas either side of the existing A465 from Grawen Lane in the east to Afon Taf Fawr where it passes under the A645 to the west (at chainage 10900) and the A470 Junction to the west (chainage 10700).

**Plate 13. HLCA 061: Taf Fawr Valley and River (Photo: Skeye 2017)**

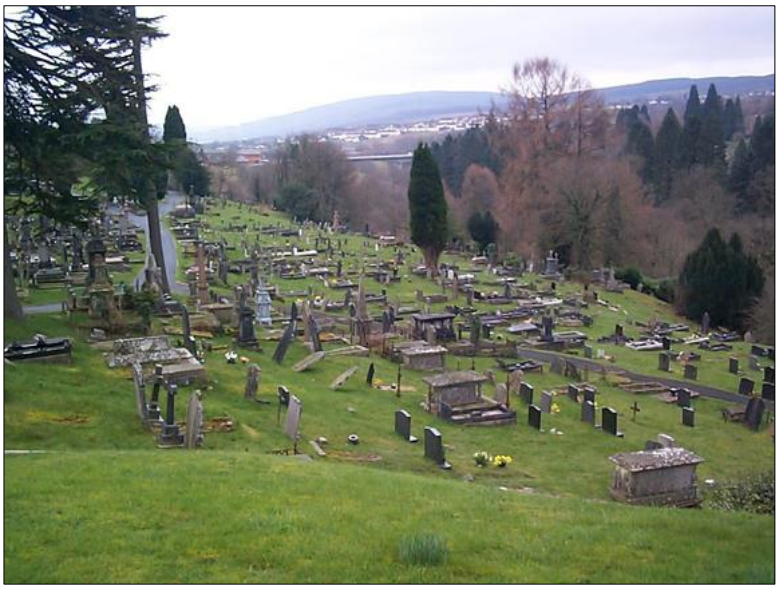

**Plate 14. Cefn Coed Cemetery & Jewish Burial Ground within HLC 061 (Photo: GGAT 2017)**

**Plate 16. HLCA 061: Cefn Coed Cemetery & Jewish Burial Ground and Essential Setting with Significant Views (Photo: Skeye 2017)**

Absolute and relative direct physical impacts on HLCA 061 are presented in Table A3.25. The overall magnitude of these impacts is presented in Table A3.26.

**Table A3.25 : Direct physical impacts on HLCA 061: Taf Fawr Valley River**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>2.47 ha of 28 ha = 8.82% of HLCA | | Magnitude & Score:<br>Slight = 2 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Open Fields.<br>1.2 ha would be permanently removed<br>(4.29% of HLCA) | C = 2 | Very Slight = 1 | Low = 2 | Moderately Reduced = 3 |
| Woodland Plantation.<br>0.87 ha would be permanently removed<br>(3.10% of HLCA) | C = 2 | Very Slight = 1 | Low = 2 | Moderately Reduced = 3 |
| Woodland and scrub.<br>0.4ha would be permanently removed within the Grade II Registered Park and Garden.<br>(1.43% of the HLCA) | B = 3 | Very Slight = 1 | Low = 2 | Moderately Reduced = 3 |
| **Summary:** 8.82% of the overall HLCA would be permanently lost or removed by development. Woodland comprising 3.10%, open fields comprising 4.29% and 1.43% of woodland and scrub of the HLCA would be permanently lost or removed by development. | | | | |

**Table A3.26 : Overall magnitude of direct physical impacts on HLCA 061: Taf Fawr River Valley**

| **Score** | **Grading** |
|---|---|
| (2 + 1 + 2 + 3) + (2 + 1 + 2 + 3) + (3 + 1 + 2 + 3) ÷ 3 + 2 = 10.33 (10) | Moderate |

**HLCA 062 : Coed Meurig**

Coed Meurig comprises an agricultural enclosed landscape of traditional hedge banks and drystone boundaries associated with post-medieval farms. This HLCA encompasses an area either side of the A465 from the Merthyr Road junction in the west to the A465 junction with the A470 in the north west of Merthyr Tydfil (between chainage 8300 to 10700). The area includes minor industrial characteristics in the form of tips extending from workings to the south.

**Plate 17. HLCA 062: Coed Meurig (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 062 are presented in Table A3.27. The overall magnitude of these impacts is presented in Table A3.28.

**Table A3.27 : Direct physical impacts on HLCA 062: Coed Meurig**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>14.64ha of 56ha = 26.14% of HLCA | | Magnitude & Score:<br>Moderate = 3 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Drystone and turfstone walling and fields.<br>4 ha would be permanently removed<br>(7.142% of HLCA) | C = 2 | Slight = 2 | Low = 2 | Slightly Reduced = 2 |
| Post-Medieval lofted cowshed.<br>0.038 ha would be permanently removed<br>(0.068% of HLCA) | C = 2 | Very Slight = 1 | Low = 2 | Lost = 6 |
| Open Fields.<br>2.8 ha would be permanently removed<br>(5% of HLCA) | C = 2 | Slight = 2 | Low = 2 | Slightly Reduced = 2 |
| Former Mining/Extraction Site.<br>6.4ha would be permanently removed<br>(11.43% of HLCA) | D = 1 | Slight = 2 | Very Low = 1 | Slightly Reduced = 2 |

|---|---|---|---|---|
| Woodland Plantation.<br>0.7 ha would be permanently removed<br>(1.25% of HLCA) | C = 2 | Slight = 2 | Low = 2 | Slightly Reduced = 2 |
| Scrub and woodland.<br>0.7 ha would be permanently removed<br>(1.25% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 26.14% of the overall HLCA would be permanently lost or removed by development, this includes 7.142% drystone and turfstone walling and fields, 0.068% post medieval farm buildings, 5% open fields, 11.43% former mining/extraction site and 1.25% woodland plantation and scrub and woodland. | | | | |

**Table A3.28 : Overall magnitude of direct physical impacts on HLCA 062: Coed Meurig**

| Score | Grading |
|---|---|
| (2 + 2 + 2 + 2) + (2 + 1 + 2 + 6) + (2 + 2 + 2 + 2) + (1 + 2 + 1 + 2) + (2 + 2 + 2 + 2) + (1 + 1 + 1 + 1) ÷ 6 + 3 = 10.5 (11) | Moderate |

### HLCA 078 : Dowlais Great Tip, Trehir and Twyn-y-Waun

HLC 078 comprises a reclaimed industrial landscape, which included extensive coal and ironstone workings dating from the 18th century. This HLCA is crossed by the proposed scheme at the far eastern end south of Penygarnddu Industrial Estate (between chainage 16150 to 16700).

**Plate 18. HLCA 078: Dowlais Great Tip, Trehir and Twyn-y-Waun (Photo: GGAT 2017)**

Absolute and relative direct physical impacts on HLCA 078 are presented in Table A3.29. The overall magnitude of these impacts is presented in Table A3.30.

**Table A3.29 : Direct physical impacts on HLCA 078: Dowlais Great Tip, Trehir and Twyn-y-Waun**

| **Direct physical impacts – absolute** | | | | |
|---|---|---|---|---|
| Absolute Impact (Loss of Area):<br>3.3ha of 194ha = 1.7% of HLCA | | Magnitude & Score:<br>Very Slight = 1 | | |
| **Direct physical impacts – relative** | | | | |
| **Elements lost** | **Site Category** | **Magnitude** | **Landscape Value** | **Landscape Value Effect** |
| Scrub and woodland.<br>2.6 ha would be permanently removed<br>(1.34% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| Existing tracks and roads.<br>0.7 ha would be permanently removed / altered<br>(0.36% of HLCA) | D = 1 | Very Slight = 1 | Very Low = 1 | Very Slightly Reduced = 1 |
| **Summary:** 1.7% of the overall HLCA would be permanently lost or removed by development, including the removal of 1.34% of scrub and woodland and 0.36% of existing roads / tracks would be affected. | | | | |

| **Indirect (non-physical) visual impacts** | | |
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Development form and appearance – offline widening | D = 1 | Moderate = 3 |
| Development form and appearance – introduction of drainage pond | D = 1 | Moderate = 3 |

**Table A4.2 : Overall magnitude of indirect physical and non-physical impacts on HLCA 007: Dowlais**

| **Score** | **Grading** |
|---|---|
| (1 + 2) + (1 + 2) + (1 + 2) ÷ 3 = 3<br>(1 + 3) + (1 + 3) ÷ 2 = 4<br>(3 + 4) x 28 ÷ 20 = 9.8 (10) | Moderate |

**HLCA 012 : Cyfarthfa Iron Works**

It is acknowledged that the Grade II* Listed Building Cefn Railway Viaduct, Merthyr Tydfil (Asset 61) falls within HLCA 012. Nevertheless, the viaduct is a key characteristic of HLCA 055: Cefn Coed-y-Cymmer, thus the indirect impacts to Asset 61 have been considered in the assessment of HLCA 055 (Tables A4.23 and A4.24).

**Table A4.3 : Indirect physical and non-physical impacts on HLCA 012: Cyfarthfa Iron Works**

| **Indirect, physical impacts** | | |
|---|---|---|
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Amenity value reduced due to removal of trees around bridge (within Scheduled area and Conservation Area) | D = 1 | Slight = 2 |
| **Indirect (non-physical) visual impacts** | | |
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Development form and appearance – offline widening of bridge within the Scheduled Monument Area and Conservation Area | A = 4 | Very Slight = 1 |

| (4 + 4) ÷ 1 = 8<br>8 x 28 ÷ 20 = 11.2 (11) | Moderate |

### HLCA 061 : Taf Fawr River Valley

It is acknowledged that the Grade II* Listed Building Cefn Railway Viaduct, Merthyr Tydfil (Asset 61) falls within HLCA 061. Nevertheless, the viaduct is a key characteristic of HLCA 055: Cefn Coed-y-Cymmer, thus the indirect impacts to Asset 61 have been considered in the assessment of HLCA 055 (Tables A4.23 and A4.24).

**Table A4.25 : Indirect physical and non-physical impacts on HLCA 061: Taf Fawr River Valley**

| **Indirect, physical impacts** | | |
|---|---|---|
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Amenity value of woodland element reduced | C = 2 | Slight = 2 |
| Amenity value of field element reduced | C = 2 | Slight = 2 |
| **Indirect (non-physical) visual impacts** | | |
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Development form and appearance – introduction of bridge and supports into woodland elements | C = 2 | Moderate = 3 |
| Development form and appearance – introduction of bridge and supports into field elements | C = 2 | Moderate = 3 |
| Development form and appearance – introduction of bridge and supports into the Registered Park and Garden area | B = 3 | Considerable = 4 |

**Table A4.26 : Overall magnitude of indirect physical and non-physical impacts on HLCA 061: Taf Fawr River Valley**

| **Score** | **Grading** |
|---|---|
| (2 + 2) + (2 + 2) ÷ 2 = 4<br>(2 + 3) + (2 + 3) + (3 + 4) ÷ 3 = 5.66<br>(4 + 5.66) x 28 ÷ 20 = 13.5 (14) | Considerable |

### HLCA 062 : Coed Meurig

**Table A4.27 : Indirect physical and non-physical impacts on HLCA 062: Coed Meurig**

| **Indirect, physical impacts** | | |
|---|---|---|
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Severance of fields within a unified landscape from one another | C = 2 | Slight = 2 |
| Frustration of historic landscape use | C = 2 | Slight = 2 |
| **Indirect (non-physical) visual impacts** | | |
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Development form and appearance – embanked road introduced into landscape element | C = 2 | Moderate = 3 |

**Table A4.28 : Overall magnitude of indirect physical and non-physical impacts on HLCA 062: Coed Meurig**

| **Score** | **Grading** |
|---|---|
| (2 + 2) + (2 + 2) ÷ 2 = 4<br>(2 + 3) ÷ 1 = 5<br>(4 + 5) x 28 ÷ 20 = 12.6 (13) | Moderate |

**HLCA 078 : Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun**

**Table A4.29 : Indirect physical and non-physical impacts on HLCA 078: Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun**

| **Indirect, physical impacts** | | |
|---|---|---|
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| No indirect physical impacts | - | - |
| **Indirect (non-physical) visual impacts** | | |
| **Impacts** | **Category and Score** | **Magnitude and Score** |
| Development form – introduction of infrastructure into landscape area | D = 1 | Moderate = 3 |

**Table A4.30 : Overall magnitude of indirect physical and non-physical impacts on HLCA 078: Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun**

| **Score** | **Grading** |
|---|---|
| (1 + 3) ÷ 1 = 4<br>4 x 28 ÷20 = 5.6 (6) | Slight |

# Annex 5 The results of Stage 4: Evaluation of relative importance

In relation to eight of the 15 HLCAs, these comprise residential settlements, transport corridors, industrial extractive and modern urban landscapes:

- Dowlais (HLCA 007);
- Taf Fechan (HLCA 027);
- Pantcadifor, Rhyd-y-Bedd and Caeracca (HLCA 030);
- Bryniau Quarries (HLCA 046);
- Dowlais Top (HLCA 047);
- Bon-y-Maen (HLCA 049);
- Gurnos and Galon-Uchaf (HLCA 050); and
- Dowlais Great Tip, Trecatti, Trehir and Twyn-y-Waun (HLCA 078).

The small elements within these HLCAs which would be affected by the proposed scheme comprise scrub and woodland, existing roads/tracks and areas of existing modern hardstanding. These elements are not listed as key characteristics for these eight HLCAs and have therefore not been assessed in terms of their relative importance, as they are considered to be of no value in relation to the Registered Landscape as a whole and nationally.

**HLCA 012 : Cyfarthfa Iron Works**

This HLCA 012 (Cyfarthfa Iron Works) is an industrial extractive landscape which is recognised as a nationally and internationally important landscape, characterised by industrial features such as the Charging Bank and Blast Furnaces, Pont-y-Cafnau Iron Bridge, Cyfarthfa Cinder Tips, and the limestone quarry and associated tram road which is a Scheduled Monument, Gyrnos Tramway and Leat (Asset 78). The HLCA also includes a Conservation Area, the Cyfarthfa Conservation Area, Merthyr Tydfil (Asset 64), which is an area of special architectural and historic interest comprising Listed Buildings (including the Grade II* Listed Building, Cefn Railway Viaduct, Merthyr Tydfil (Asset 61)), Locally Listed Buildings and buildings of special architectural interest.

The key element within this HLCA which would be directly/physically affected by the proposed scheme comprise small areas of woodland and scrub below the Taf Fechan Bridge, that would be removed along the river banks of the Taf Fechan river; and which are included within the Scheduled Monument area (Gurnos Tramway and Leat (Asset 78)) and the Cyfarthfa Conservation Area, Merthyr Tydfil (Asset 64). These key elements have been assessed to be of High overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.2).

**HLCA 035 : Pengarnddu**

HLCA 035 (Pengarnddu) comprises a transport corridor associated with the limestone quarries at Twynau Gwynion. The landscape also comprises extensive remains of the Dowlais Free Drainage System. The elements within this HLCA which would be affected by the proposed scheme comprise open fields, scrub and woodland, and reservoirs. The reservoirs are listed as a key characteristic for this HLCA and have been assessed to be of Considerable overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.4).

**Table A5.3 : Evaluation of relative importance HLCA 035: Pengarnddu**

|---|---|---|---|
| (4 x High @ 4) + (3 x Moderate @ 3) + (2 x Low @ 2) + (2 x Poor @ 1) = 31 ÷ 55 x 100 = 56.36 | (2 x High @ 4) + (2 x Moderate @ 3) + (3 x Low @ 2) + (4 x Poor @ 1) = 24 ÷ 55 x 100 = 43.63 | (1 x High @ 4) + (2 x Moderate @ 3) + (2 x Low @ 2) + (6 x Poor @ 1) = 20 ÷ 55 x 100 = 36.36 | (56.36 + 43.63 + 36.36) ÷ 3 = 45.45 (45) |

### HLCA 052 : Gurnos Farm and Bunkers Hill

HLCA 052 (Gurnos Farm and Bunkers Hill) comprises an agricultural landscape characterised by medium-large regular enclosures with associated drystone walls. It also includes a transport corridor comprising a tramroad to Morlais Castle Quarries, and a possible route of a Roman road associated with the crossing of the Taf Fechan at Pont Sarn. The elements within this HLCA which would be affected by the proposed scheme comprise woodland, open fields, tracks and scrub and woodland. The open fields are listed as a key characteristic for this HLCA and have been assessed to be of Considerable overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.6).

**Table A5.5 : Evaluation of relative importance HLCA 052: Gurnos Farm and Bunkers Hill**

| (2 x Very High @ 5) + (2 x High @ 4) + (1 x Moderate @ 3) + (5 x Low @ 2) + (1 x Poor @ 1) = 32 ÷ 55 x 100 = 58.18 | (1 x Very High @ 5) + (2 x High @ 4) + (2 x Moderate @ 3) + (4 x Low @ 2) + (2 x Poor @ 1) = 29 ÷ 55 x 100 = 52.72 | (1 x Very High @ 5) + (1 x High @ 4) + (4 x Moderate @ 3) + (3 x Low @ 2) + (2 x Poor @ 1) = 29 ÷ 55 x 100 = 52.72 | (58.18 + 52.72 + 52.72 ÷ 3 = 54.54 (55) |

### HLCA 053 : Y Graig, Gurnos

HLCA 053 (Y Graig, Gurnos) comprises an area of scrubland, open fields and trackways. The area is a remnant of land associated with Gurnos Farm, but severed from it by the existing A465. Historic mapping shows that the area contained a network of tracks leading to the Taf Fechan Valley and the Gurnos Quarry and lime kilns. A small number of extractive features are present, possibly gravel pits. The elements within this HLCA which would be affected by the proposed scheme comprise open fields, scrub and woodland. The open fields and woodland are listed as key characteristics for this HLCA and have been assessed to be of Moderate overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.8).

**Table A5.7 : Evaluation of relative importance HLCA 053: Y Graig, Gurnos**

**HLCA 055: Cefn Coed-y-Cymmer (HLCA 055)**

This HLCA 055 (Cefn Coed-y-Cymmer) is an industrial worker's squatter settlement which has retained its identity, despite the 20th century developments that have taken place around it. The elements within this HLCA which would be directly/physically affected by the proposed scheme comprise areas of scrub and woodland and existing tracks and roads.

The proposed scheme would also have an indirect impact on the Cyfarthfa Conservation Area, Merthyr Tydfil (Asset 64) and the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61). The Cefn Railway Viaduct, Merthyr Tydfil (Asset 61) was built to carry the Brecon and Merthyr Railway over the Taf Fawr valley and is a key component of HLCA 055 which would be affected by the proposed scheme. Given its designated status, the Cefn Railway Viaduct, Merthyr Tydfil (Asset 61) has been assessed to be of High overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.10).

**HLCA 061 : Taf Fawr River Valley**

HLCA 061 (Taf Fawr River Valley) comprises the valley of the Afon Taf to the north of the Cyfarthfa Ironworks and includes part of a Registered Park and Garden, Cefn Coed Cemetery (Asset 134). The character of the area has been affected by the establishment of the cemetery in 1858. The area also formed the corridor of the construction railway for the Llwyn-Onn Reservoir, built between 1914 and 1927. The key elements within this HLCA which would be affected by the proposed scheme concerns the open fields and woodland, part of which are located within the Registered Park and Garden. These key elements have been assessed to be of High overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.12).

**HLCA 062 : Coed Meurig**

HLCA 062 (Coed Meurig) comprises an agricultural landscape characterised by traditional drystone and hedged boundaries and sheep pens. The area includes a number of post-medieval farms, areas of ancient woodland and only minor intrusion from historic industrial activity. The elements within this HLCA which would be affected by the proposed scheme comprise woodland, open fields, tracks and scrub and woodland. The woodland and open fields are key characteristics of this HLCA and have been assessed to be of Considerable overall value in relation to the Registered Landscape as a whole and nationally (see Table A5.14).

**Table A5.14 : Overall score for evaluation of relative importance stages a) – c) for HLCA 062 Coed Meurig**

| Score a | Score b | Score c | Overall Score |
|---|---|---|---|
| (2 x Very High @ 5) + (2 x High @ 4) + (1 x Moderate @ 3) + (5 x Low @ 2) + (1 x Poor @ 1) = 32 ÷ 55 x 100 = 58.18 | (1 x Very High @ 5) + (3 x High @ 4) + (1 x Moderate @ 3) + (4 x Low @ 2) + (2 x Poor @ 1) = 30 ÷ 55 x 100 = 54.54 | (1 x Very High @ 5) + (1 x High @ 4) + (4 x Moderate @ 3) + (3 x Low @ 2) + (2 x Poor @ 1) = 29 ÷55 x 100 = 52.72 | (58.18 + 54.54 + 52.72) ÷ 3 = 55.14 (55) |

# Annex 6 The results of Stage 5: Assessment of overall significance of impact

**HLCA 007 : Dowlais**

**Table A6.1 : Assessment of significance of impact on HLCA 007: Dowlais**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 007: Dowlais is a residential settlement which has been expanded and its layout has changed from a characteristic grid system. The small elements of this HLCA which are included within the footprint of the proposed scheme comprise open fields and scrub and woodland which are not listed as key characteristics for this HLCA, therefore these areas are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 3.74% of the overall HLCA and would also result in the slight severance of the open field and woodland elements which are not key characteristics for this HLCA. There would also be a slight reduction of the value of the field element with the creation of the drainage pond within this area. The proposed scheme would have a moderate indirect, visual impact on this HLCA associated with the offline widening of the road and the introduction of the drainage pond. | The proposed scheme would have an indirect visual impact on the key elements of the HLCA and thus would result a slight reduction in the overall value of the HLCA. |
| **Score: None** | **Score: 5 – Medium** | **Score: 3 – Low** |

**Table A6.2 : Overall total score and significance of impact for HLCA 007: Dowlais**

| | |
|---|---|
| **Total score:** | 5 + 3 = 8 |
| **Overall Significance of Impact:** | Slight |

**HLCA 012 : Cyfarthfa Iron Works**

**Table A6.3 : Assessment of significance of impact on HLCA 012: Cyfarthfa Iron Works**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 012: Cyfarthfa Iron Works is an industrial extractive landscape and includes a Scheduled Monument, Gyrnos Tramway and Leat (Asset 78). The area of the HLCA included within the working footprint of the proposed scheme comprises an existing modern cantilever bridge (Taf Fechan Bridge Cefn Coed (NPRN Ref. 408808) and woodland and scrub along the river banks of the Taf Fechan river. Gyrnos Tramway and Leat (Asset 78) is a key characteristic if HLCA 012 and has been assessed to be of High value. | The proposed development would result in the slight permanent land loss of 0.50% of the overall HLCA and would also result in the slight reduction of the amenity value of the HLCA through the removal of trees around the bridge supports and the offline widening of the bridge.<br>The proposed widening of the Taf Fechan overbridge has been designed to minimise impact on the Gurnos Tramway and Leat Scheduled Monument (Asset 78). Furthermore, the loss or damage to landscape features such as mature trees has been avoided where possible. | The proposed scheme would have an indirect visual impact on the key elements of the HLCA and thus would result a slight reduction in the overall value of the HLCA. |
| **Score: 7 – High** | **Score: 3 – Low** | **Score: 2 – Low** |

**Table A6.4 : Overall total score and significance of impact for HLCA 012: Cyfarthfa Iron Works**

| | |

| **Total score:** | 7 + 3 + 2 = 12 |
| **Overall Significance of Impact:** | Moderate |

**HLCA 027 : Taf Fechan**

**Table A6.5 : Assessment of significance of impact on HLCA 027: Taf Fechan**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 027: Taf Fechan is a transport corridor within the Taf Fechan Valley. The small elements of this HLCA which are included within the footprint of the proposed scheme comprise scrub and woodland and existing tracks or roads, which are not listed as key characteristics for this HLCA, therefore these areas are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 0.194% of the overall HLCA and would also result in the slight indirect, visual impact on this HLCA associated with the offline widening of the road and the alteration/introduction of the tracks/roads. | The key elements of the HLCA will remain essentially unchanged. |
| **Score: None** | **Score: 1 – Very Low** | **Score: 1 – Very Low** |

**Table A6.6 : Overall total score and significance of impact for HLCA 027: Taf Fechan**

| **Overall Significance of Impact:** | Very Slight |

**HLCA 030 : Pantcadifor, Rhyd-y-Bedd and Caeracca**

**Table A6.7 : Assessment of significance of impact on HLCA 030: Pantcadifor, Rhyd-y-Bedd and Caeracca**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 030: Pantcadifor, Rhyd-y-Bedd and Caeracca is a roadside residential settlement which was formerly associated with local quarries within the area. The elements of this HLCA which are included within the footprint of the proposed scheme comprise open fields, scrub and woodland, modern hardstanding and existing tracks and roads. These elements are not listed as key characteristics for this HLCA, therefore these areas are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the sight permanent land loss of 2.55% of the overall HLCA and would also result in the slight severance of the open field which is not key characteristics for this HLCA. The proposed scheme would also have a moderate indirect, visual impact on this HLCA associated with the offline widening of the road and the alteration/introduction of the tracks/roads. | The proposed scheme would have an indirect visual impact on the key elements of the HLCA and thus would result a slight reduction in the overall value of the HLCA. |
| **Score: None** | **Score: 4 – Medium** | **Score: 2 – Low** |

| **Total score:** | 4 + 2 = 6 |
| **Overall Significance of Impact:** | Slight |

**HLCA 035 : Pengarnddu**

**Table A6.9 : Assessment of significance of impact on HLCA 035: Pengarnddu**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 035: Pengarnddu is a transport corridor associated with limestone quarries within the local area. The HLCA also includes extensive remains of the Dowlais Free Drainage System. The elements within this HLCA which would be affected by the proposed scheme comprise open fields, scrub and woodland and reservoirs. The reservoirs are listed as key characteristics for this HLCA, and have been assessed to be of Medium overall value. | The development of the proposed scheme would result in the slight permanent land loss of 5.29% of the overall HLCA comprising open field and scrub and woodland elements, thus there will be a severance of the open field element of which the amenity value would be reduced.<br>The proposed scheme would also have a considerable indirect, visual impact on this HLCA associated with the offline widening of the road, the construction of the embankments and structure over the reservoir and the alteration/introduction of existing tracks/roads. | The development of the proposed scheme would have an impact on key elements of the HLCA which would result in a moderate reduction of the overall value of the historic landscape area. |
| **Score: 6 – Medium** | **Score: 4 – Medium** | **Score: 4 – Medium** |

| **Total score:** | 6 + 4 + 4 = 14 |
| **Overall Significance of Impact:** | Moderate |

**HLCA 046 : Bryniau Quarries**

**Table A6.11 : Assessment of significance of impact on HLCA 046: Bryniau Quarries**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 046: Bryniau Quarries is an historical extractive industrial landscape and is characterised by quarries and associated tramroads. The elements within this HLCA which would be affected by the proposed scheme comprise a small part of the former quarry area, scrub and woodland and existing tracks and roads. These elements are untypical of the historic landscape and are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 5.50% of the overall HLCA which includes 4% of the former quarry area which is made up of scrubland. There would also be a slight reduction of the value of the field element with the creation of the drainage ponds within this area. The proposed scheme would have a moderate indirect, visual impact on this HLCA associated with the formation of the embanked road into the landscape and with the introduction of the drainage ponds. | The development of the proposed scheme would have an impact on key elements of the HLCA which would result in a moderate reduction of the overall value of the historic landscape area. |
| **Score: None** | **Score: 4 – Medium** | **Score: 4 – Medium** |

| **Overall Significance of Impact:** | Slight |

**HLCA 047 : Dowlais Top**

**Table A6.13 : Assessment of significance of impact on HLCA 047: Dowlais Top**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 047: Dowlais Top comprises reclaimed industrial land which has been redeveloped and is characterised by modern commercial and industrial buildings. The small elements of this HLCA which are included within the footprint of the proposed scheme comprise scrub and woodland and existing tracks and roads, which are not listed as key characteristics for this HLCA, therefore these areas are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 0.35% of the overall HLCA and would have a slight indirect, visual impact on this HLCA associated with the offline widening of the road, the construction of the associated embankments and the alternation/introduction of the tracks/roads into the landscape. | The key elements of the HLCA will remain essentially unchanged. |
| **Score: None** | **Score: 1 – Very Low** | **Score: 1 – Very Low** |

| **Overall Significance of Impact:** | Very Slight |

**HLCA 049 : Bon-y-Maen**

**Table A6.15 : Assessment of significance of impact on HLCA 049: Bon-y-Maen**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 049: Bon-y-Maen was formerly agricultural post-medieval farm land with irregular fields, but is now a modern industrial estate, comprising mixed industrial and commercial units. The elements of this HLCA which are included within the footprint of the proposed scheme comprise scrub and woodland, modern hardstanding and existing tracks/roads. These elements are not listed as key characteristics for this HLCA and are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 11.79% of the overall HLCA and also result in a slight indirect, visual impact on this HLCA associated with the offline widening of the road and a moderate indirect impact in relation to the alteration/introduction of tracks /roads into the landscape. | The development of the proposed scheme would have a direct and indirect impact on the HLCA and thus would result in a slight reduction of the overall value of the historic landscape area. |
| **Score: None** | **Score: 4 – Medium** | **Score: 2 – Low** |

**HLCA 050 : Gurnos and Galon-Uchaf**

**Table A6.17 : Assessment of significance of impact on HLCA 050: Gurnos and Galon Uchaf**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 050: Gurnos and Galon-Uchaf is an existing urban landscape, built on former agricultural land during the mid-1900s. The small elements of this HLCA which are included within the footprint of the proposed scheme comprise scrub and woodland and existing tracks and roads. These elements are not listed as key characteristics for this HLCA and are not considered to be of any value to the HLCA. | The development of the proposed scheme would result in the slight permanent land loss of 2.21% of the overall HLCA and also result in the severance of woodland elements. The proposed scheme would have a slight indirect, visual impact on this HLCA associated with the offline widening of the existing road and the alteration/introduction of tracks/roads. | The proposed scheme would have an indirect visual impact on the key elements of the HLCA and thus would result a slight reduction in the overall value of the HLCA. |

**Table A6.19 : Assessment of significance of impact on HLCA 052: Gurnos Farm and Bunker's Hill**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 052: Gurnos Farm and Bunkers Hill comprises an agricultural landscape characterised by medium-large regular enclosures with associated dry stone walls. The elements within this HLCA which would be affected by the proposed scheme comprise woodland, open fields, tracks and scrub and woodland. The open fields are the elements which are listed as a key characteristic for this HLCA and have been assessed to be of Medium value. | The development of the proposed scheme would result in the slight permanent land loss of 11.14% of the overall HLCA and result in the severance of open field and woodland elements. There would also be a moderate reduction of the value of the field element with the creation of the drainage ponds within this area. The proposed scheme would also have a moderate indirect, visual impact on this HLCA associated with the offline widening of the existing road, the introduction of the drainage ponds into the landscape area and the alteration/introduction of tracks/roads. | The development of the proposed scheme would have an impact on key elements of the HLCA which would result in a moderate reduction of the overall value of the historic landscape area. |

**Table A6.21 : Assessment of significance of impact on HLCA 053: Y Graig, Gurnos**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 053: Y Graig, Gurnos comprises an area of scrubland, open fields and trackways. The area is a remnant of land associated with Gurnos Farm, but severed from it by the existing A465. The elements within this HLCA which would be affected by the proposed scheme comprise open fields, scrub and woodland which are considered to be key characteristics of the HLCA given their rural type they have been assessed to be of Medium value. | The development of the proposed scheme would result in the moderate permanent land loss of 27.89% of the overall HLCA and would result in the severance of scrub, woodland and trackway elements. The proposed scheme would also have a moderate indirect, visual impact on this HLCA associated with the introduction of the large-scale banked roads into the open field and scrub and woodland element. | The proposed scheme would have a direct and indirect impact on the key elements of the HLCA and thus would result a slight reduction in the overall value of the HLCA. |

**Table A6.23 : Assessment of significance of impact on HLCA 055: Cefn Coed-y-Cymmer**

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 055: Cefn Coed-y-Cymmer is an industrial worker's squatter settlement which has retained its identity, despite the 20th century developments that have taken place around it. The elements of this HLCA which are included within the footprint of the proposed scheme comprise scrub and woodland and existing tracks and roads. The Cefn Railway Viaduct, Merthyr Tydfil (Asset 61), a Grade II* Listed Building is a key characteristic for this HLCA and has been assessed to be of High value. | The development of the proposed scheme would result in the slight permanent land loss of 2% of the overall HLCA and have a considerable indirect, visual impact on this HLCA associated with the offline widening of the existing road and the alteration/introduction of tracks/roads into essential setting of Grade II* Listed Building Cefn Railway Viaduct, Merthyr Tydfil. | The development will result in a reduction of the overall value of the HLCA. |

| Value of HLCA | Impact of development | Reduction of the value of the HLCA on Register |
|---|---|---|
| HLCA 061: Taf Fawr River Valley comprises a religious and ritualistic landscape and includes part of a Registered Park and Garden, Cefn Coed Cemetery (Asset 134). The key elements within this HLCA which would be affected by the proposed scheme concerns the open fields and woodland, part of which are located within the Registered Park and Garden, which has been assessed to be of Medium value. | The development of the proposed scheme would result in the slight permanent land loss of 8.82% of the overall HLCA and result in the slight reduction in the amenity value of the woodland and field elements. The proposed development would also have a moderate to considerable indirect, visual impact on this HLCA associated with the introduction of the bridge and supports into the field and woodland elements, which also includes a small proportion of the Registered Park and Garden. | The proposed scheme would have a direct and indirect impact on the key elements of the HLCA and thus would result a reduction in the overall value of the HLCA. |

Close filtered views south through intervening trees and open views to south-east, due to loss of trees, to attenuation pond with access track, traffic flow and highway infrastructure, such **as a variable message sign and other** signage, on elevated A465 mainline and link road beyond in middle distance. Also longer distance and distant glimpses of traffic on A465 further east, such as offline route at Y Graig.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | Summer Year 15<br>Established mitigation planting would soften close views south-east of attenuation pond and generally screen traffic flow on elevated A465 mainline, though glimpses of high sided vehicles on link road would be visible. Established mitigation planting would also screen or soften longer distance and distant glimpses to views of traffic on A465 further east, such as offline route at Y Graig.<br>The magnitude of impact would **minor adverse.** | **Slight adverse** |
| S6-R36 (8) | 1 – 8 Clos Cribyn, Clwydyfagwyr, Merthyr Tydfil. | 70 m | Lower level views north-west to south-east generally contained by close boarded fencing and deciduous trees along Swansea Road in summer. Oblique views north-west across trees to moorland and Penmoelallt forest within BBNP. Middle distance glimpsed view of traffic on A465 as it descends Baverstock ridge. Views north-east across trees to urban edge of Gurnos and Cefn Cli-Sanws in BBNP. Lighting columns along Swansea Road and pylons are detracting features in views. | Construction<br>Close views north-west to north-east opened up by loss of trees to construction of Swansea Road link road and A465 mainline including highway infrastructure such as signage, as well as minor adjustments to track below properties. Also distant glimpses to construction activities associated with proposed scheme further east, such as offline route at Y Graig.<br>The magnitude of impact would be **major adverse.** | **Large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse.** | **Large adverse** |
| | | | | Operation<br>Close views north-west to north-east opened up by loss of trees to traffic flow and highway infrastructure, such as **a variable message sign and other** signage, on Swansea Road link road and A465 mainline. Also distant glimpses of traffic on A465 further east, such as offline route at Y Graig.<br>The magnitude of impact would be **major adverse.** | **Large adverse** | Summer Year 15<br>Established mitigation planting would generally screen traffic flow and highway infrastructure on Swansea Road link road to north-west and A465 mainline to north, though tops of high sided vehicles would remain noticeable on link road in close views above garden fence.<br>The magnitude of impact would be **minor adverse.** | **Slight adverse** |

| Reference number[1] with number of properties in brackets<br>* Listed Building | Location / address | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S5-R20 (8) | 84 – 87 and 94 - 95b Lakeside Gardens, Gurnos, Merthyr Tydfil. | 65 m | Slightly elevated oblique views south-west across Cefn Coed to the Baverstock ridge, including distant glimpses of traffic on the A465 descending from the ridge. Views north-west to north-east from these bungalows and two storey properties are generally contained by mix of deciduous and evergreen trees. Filtered glimpses across Y Graig Open Access Land in winter. The A465 is screened by landform and vegetation. | <u>Construction</u><br>Close filtered views north-west to construction of widened A465 Taf Fechan viaduct with parallel NMU route and associated compound and stockpiles. Also near open views north and north-east, due to vegetation loss, to construction of offline A465 mainline, with associated highway infrastructure such as signage and environmental barrier, parallel NMU route and a large attenuation pond. Distant glimpses of construction of A465 at Baverstock ridge to south-west.<br>The magnitude of impact would be **major adverse.** | **Large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse.** | **Large adverse** |
| | | | | <u>Operation</u><br>Close filtered views north-west to traffic flow on Taf Fechan viaduct above 1 m integrated environmental barrier, and parallel NMU bridge. Also near open views north and north-east, due to vegetation loss, to earthworks for large attenuation pond and users on NMU route, as well as traffic flow on offline A465 mainline, partially screened by 1 m high environmental barrier and cutting. **Glimpses of variable message sign to north east.** Traffic flow on A465 descending from Baverstock ridge would generally be screened by cutting in distance to south-west.<br>The magnitude of impact would be **major adverse.** | **Large adverse** | <u>Summer Year 15</u><br>Established mitigation planting would screen or soften views of attenuation pond and users of NMU route, and in combination with cutting, generally screen environmental barrier and traffic flow on offline A465 mainline to north and north-east. Taf Fechan viaduct and parallel NMU bridge would be screened by existing trees in leaf.<br>The magnitude of impact would be **minor adverse.** | **Slight adverse** |
| S5-R23 (3) | 1-3 Gurnos Farm Cottages, Gurnos Ring Road, Gurnos, Merthyr Tydfil. | 13 m | Views south-west to east are generally contained by garden vegetation and vegetation belt along A465 in summer. Close direct filtered views to traffic on A465 in winter. | <u>Construction</u><br>Close views south-west to east, partially filtered by garden vegetation, to construction of retaining structure and embankments for widened and elevated A465, including highway infrastructure such as signage and environmental barrier. Loss of southern extent of gardens. Oblique filtered views through garden vegetation to construction of attenuation pond to east.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** |
| | | | | <u>Operation</u><br>Close views south-west to east, partially filtered by garden vegetation, to tall retaining structure and embankments, traffic flow and highway infrastructure such as **variable message sign and other** signage, on A465. Oblique filtered views east through garden vegetation to earthworks for attenuation pond. Glimpses of tops of lighting columns / light spill to north-east above existing trees.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** | <u>Summer Year 15</u><br>Established mitigation planting would screen lower part of vehicles on A465 and highway infrastructure, though tops of high sided vehicles and signage, and glimpses of retaining structure and environmental barrier would remain. Filtered views of attenuation pond to east would remain. Possible glimpses of tops of lighting columns / light spill to north-east.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |

| Reference number[1] with number of properties in brackets<br>* Listed Building | Location / address | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S5-R24 (62) | 7 – 13 (odds), 12 – 26 (evens) and 59 – 65 (odds) Heather Road, 1 – 17 (odds) Lupin Close, 2 – 56 (evens) and 11 – 33 (odds) Lanvender Road, and 2 – 12 Clover Road, , Gurnos, Merthyr Tydfil. | 145 m | Wide open views south-west and west across urban areas of Cefn Coed and Clwydyfagwyr to Baverstock ridge and BBNP in background. Glimpsed views of traffic and lighting columns on A465 in Cefn Coed and near A470 junction and Baverstock ridge. Lower level views north-west and north to edge of Y Graig open space, with BBNP in background. Pylons are detracting features in landscape. | <u>Construction</u><br>Middle distance views west to construction of widened A465 with highway infrastructure through Cefn Coed, including demolition and construction of NMU bridge, and widened viaduct and new NMU bridge at Taf Fechan, as well as glimpses of construction of offline route and attenuation pond at Y Graig, opened up by loss of vegetation. Longer distance and distant views south-west to construction of A470 junction with elevated A465 mainline and widened A465 with parallel link road to Baverstock.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** |
| | | | | <u>Operation</u><br>Middle distance views west to traffic flow and highway infrastructure on widened A465 at eastern edge of Cefn Coed, including southern extent of offline route through Y Graig, opened up further by loss of vegetation. **Glimpses of variable message sign to west.** Earthworks on edge of BBNP, traffic flow on elevated A465 through A470 junction and on ascent to Baverstock ridge, more prominent in longer distance and distant views south-west due to loss of vegetation and vertical alignment, as well as parallel link road. Overall reduction in lighting columns / light spill along route perceptible at night.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | <u>Summer Year 15</u><br>Established mitigation planting in combination with landform would screen views of traffic flow on offline route through Y Graig and generally soften middle distance to distant views of traffic flow and highway infrastructure on A465 to west and south-west, although traffic would remain slightly more prominent. Overall reduction in lighting columns / light spill along route perceptible at night.<br>The magnitude of impact would be **minor adverse.** | **Slight adverse** |
| S5-R27 (27) | 17 - 32 Pen Gurnos, Ty Gwanfarren Residential Home, and 5-12 and 47 – 48 Penyfan View Gurnos, Merthyr Tydfil. | 37 m | Close direct views north across Gurnos Ring Road to tree belt along A465, which screens views of traffic flow in summer and filters views in winter. Glimpses to underpass to Gurnos Farm to north-west. Views west and east contained by adjacent properties and/or trees, with exception of distant, generally oblique views above trees west to glimpses of traffic on A465 descending from | <u>Construction</u><br>Close views west, north and east to construction of widened and elevated A465 mainline including tall retaining wall and embankment, as well as highway infrastructure such as signage and environmental barrier, opened up by loss trees. Also close generally oblique views west to construction of access track / underpass to Gurnos Farm, with distant glimpses to construction at Baverstock ridge in background.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** |

| Reference number[1] with number of properties in brackets<br>* Listed Building | Location / address | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| | | | Baverstock ridge. | Operation<br>Close views west, north and east across Gurnos Ring Road, opened up by loss of trees, to tops of high sided vehicles and signage on A465 mainline above 3 m high environmental barrier on tall retaining wall and embankment, which would appear very dominant in views. **A variable message sign would also be prominent.** Close, generally oblique views west to access track / underpass to Gurnos Farm, with distant glimpses to traffic flow on A465 mainline and parallel link road descending from Baverstock ridge in background.<br>The magnitude of impact would be **major adverse.** | **Very large adverse** | Summer Year 15<br>Established mitigation planting would soften views of embankment and screen 3 m high environmental barrier and traffic flow on A465 in some views, but would not fully mitigate views of tall retaining wall, 3 m high environmental barrier and tops of high sided vehicles opposite some properties on Pen Gurnos. **The variable message sign would remain prominent.** Access track / underpass to Gurnos Farm would generally be screened by established mitigation planting to west, while some oblique distant glimpses to traffic flow on A465 mainline and parallel link road descending from Baverstock ridge would remain.<br>The magnitude of impact would be **major adverse.** | **Large adverse** |
| S5-R28 (32) | 1 – 4 and 19 - 46 Penyfan View, Gurnos, Merthyr Tydfil. | 75 m | Views generally contained locally by surrounding properties and deciduous trees. Close filtered glimpses between properties and through trees to traffic on A465 to north in winter. | Construction<br>Close partial views north between properties to construction of widened and elevated A465 mainline including tall embankment above low retaining wall, as well as highway infrastructure such as signage and environmental barrier, opened up by loss of trees.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** |
| | | | | Operation<br>Close partial views north between properties, opened up by loss of vegetation, to tops of high sided vehicles and signage on A465 mainline above 3 and 4 m high environmental barrier, on tall embankment above low retaining wall. **Glimpses of a variable message sign.**<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | Summer Year 15<br>Established mitigation planting would soften views of embankment and generally screen 3 and 4 m high environmental barrier, **variable message sign** and traffic flow on A465.<br>The magnitude of impact would be **negligible adverse.** | **Slight adverse** |
| S5-R48 (29) | 1 – 9 Beacon View, 1 – 6 Cross Houlson Street, 7 – 9 Houlson Street, 6 - 8 Davies Street, 5 - 7 Jones Street, 31 – 35 Guest Cottages, Dowlais, Merthyr Tydfil. | 21 m | These properties have direct or oblique descending views north towards the A465 in close proximity. Beyond the A465 the views are extensive, towards Pant with open hillsides beyond, partially obstructed by trees on embankments and within the wider landscape. Elevated views extend along the A465 west towards Galon Uchaf and east towards Dowlais | Construction<br>The road widening earthworks, Pant viaduct and Jones Road overbridge construction would be visible in addition to the road surfacing in close proximity. The compound would be visible to the west.<br>The magnitude of impact would be **major adverse**. | **Very large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |
| | | | | Operation<br>The increased road surface and traffic on it would be visible with 2 and 3 m high environmental barriers reducing views of traffic on the road east of Pant viaduct and extending east beyond Jones Street overbridge. **The barriers themselves would however, be prominent.**<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | Summer Year 15<br>Established mitigation planting on embankments would reduce longer views along the A465 to the east and west but the section of road **and environmental barriers** between Pant viaduct and Jones Street would remain visible.<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |

| Reference number[1] with number of properties in brackets<br>* Listed Building | Location / address | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S5-R49 (34) | Wern House, Garn House, Bryn Awel & Fronheulog, Upper Street, 1 – 28 Guest Cottages, and, 3 and 4 Jones Street, Dowlais, Merthyr Tydfil. | 33 m | These terraced properties have rear northern views to the A465 over a field and filtered through intervening vegetation and partially screened by outbuildings. Traffic on the A465 is screened by roadside vegetation. | Construction<br>Vegetation clearance along the A465 would open up views of the A465 and fields beyond, including the earthworks around the reservoir. Construction activities including earthworks, movement of machines and road surfacing would be visible. Views of the NMU overbridge construction would also be possible.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |
| | | | | Operation<br>The A465 and traffic on it would be visible in slight cutting between the NMU overbridge and Guest Cottages where it would be visible on embankment approaching Jones Street overbridge. The NMU overbridge earthworks and 3 m high environmental barrier would partially screen traffic on the road **although the barrier itself would be prominent.**<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | Summer Year 15<br>Established mitigation planting along the A465 would screen traffic on the road **and environmental barriers.** NMU overbridge would remain in the view.<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |
| S5-R50 (11) | 7, 7a,8,9,9a and 10 – 15 Upper Row, and Penn-y-Wern House, Dowlais, Merthyr Tydfil. | 130 m | There are rear northern views to the A465 over Upper Row and parked cars, open space and play area filtered through scattered vegetation in the open space behind the properties and vegetation along the edge of the A465. | Construction<br>Vegetation clearance along the A465 would open up views of the A465 and fields beyond, including the earthworks around the reservoir. Construction activities including earthworks, movement of machines and road surfacing would be visible. Views of the NMU overbridge construction would also be possible.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |
| | | | | Operation<br>The A465 and traffic on it would be visible in shallow cutting between the NMU overbridge and Guest Cottages, and on embankment east of the NMU overbridge. The NMU overbridge earthworks and 3 m high environmental barrier would screen traffic on the road for its length, **although the barrier itself would be prominent.** The NMU bridge and people using it would be in view.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | Summer Year 15<br>Established mitigation planting along the A465 would screen traffic on the road **and environmental barriers.** NMU overbridge would remain in the view.<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |

# Changes to Appendix 10F – Visual Effects Schedule: Users of Public Rights of Way and Open Access Land

**The table rows contained within this document are complete replacements of the corresponding table rows published in the July 2017 Environmental Statement Volume 2 Appendix 10F. Text amendments are shown in red bold ink. There are no further changes to Appendix 10F as published in July 2017.**

**Table 10F.1 Visual effects schedule: users of Public Rights of Way and Open Access Land**

**Value / sensitivity to change: High**

| Reference number[2] with length / area of PRoW / space affected in brackets | PRoW number or land name and designation | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S6-A18 (450 m) | National Cycle Route 46 (NCR 46). | 0 m | Views north from southern part of route generally contained by hedgerows and trees along road. Small number of glimpsed views to high-sided vehicles on A465 in summer. Filtered views through hedgerow to vehicles on A465 in winter.<br>Middle distance views north and north-east from northern part of route on Crematorium Road across grassland to glimpses of high-sided vehicles and upper three-quarters of light columns on A465, set against backdrop of woodland. | Construction<br>Close and middle distance views of construction of elevated A465 at Baverstock junction, the junction roundabouts and attenuation pond, including major earthworks activities. Views of construction exacerbated by some loss of existing vegetation.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse**. | **Large adverse** |
| | | | | Operation<br>Mainly close views, with intermittent middle distance views, of elevated A465 at Baverstock junction, with associated traffic flow and highway infrastructure including overbridge, **a variable message sign and other** signage, lighting columns / light spill, new roundabout and attenuation pond.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | Summer Year 15<br>Close views, and intermittent middle distance views, of elevated A465, with associated traffic flow and highway infrastructure would remain. Attenuation pond would also be visible. Some limited screening by localised established mitigation planting.<br>The magnitude of impact would be **major adverse**. | **Large adverse** |
| S6-A21 (95 ha) | Mynydd Aberdar Countryside and Rights of Way Act Open Access Land (including scheduled ancient monument - Iron Ore Scours and Patch Workings at Winch Fawr, Merthyr Tydfil). | 0 m | Close partial views from northern-most corner of open access land to traffic and lighting columns at Baverstock junction, with Jah Jireh Care Home in background<br>Wide views from north-facing part of open access land, north across moorland to traffic and lighting columns on A465. Very sparse scattered vegetation along A465 provides limited screening in summer. Several pylons are detracting features in landscape. BBNP in background.<br>Wide close and middle distance views north-east to properties within Gellideg. A465 and A470 generally screened by properties and vegetation. BBNP in background. | Construction<br>Close, middle distance and longer distance views north of construction of A465 on embankment including major earthworks activities. Some of Baverstock cutting works visible although much of construction screened by the cutting. Longer distance glimpses to east / north-east of A470 junction and Taf Fawr viaduct structures construction.<br>The magnitude of impact would be **moderate adverse**. | **Large adverse** | Winter Year 1<br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |
| | | | | Operation<br>Close, middle distance and longer distance views south of A465 on embankment with associated traffic flow and highway infrastructure **including a variable message sign and other signage**. Part of Baverstock cutting visible, although cutting would also screen part of A465. Longer distance glimpses east / north-east of A470 junction including slip roads, roundabouts and Taf Fawr viaducts, with associated traffic flow, signage and lighting columns / light spill.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | Summer Year 15<br>Close, middle distance and longer distance views of A465 on embankment, with associated traffic flow and highway infrastructure, would remain and part of Baverstock cutting would be visible. Longer distance glimpses to east / north-east of A470 junction would remain.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |

[2] Refer to Figure 10.8

| Reference number[2] with length / area of PRoW / space affected in brackets | PRoW number or land name and designation | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S6-A23<br>(640 m) | National Cycle Route 46 (NCR 46). | 80 m | Lower level views north-west to north-east generally contained by trees and / or properties. Elevated, often glimpsed longer distance, views to Trefechan, Cefn Coed, Gurnos and hills within BBNP in background.<br>Tops of light columns on A465 and filtered glimpses through trees to traffic on A465 in views north at western extent of route.<br>Glimpsed and filtered middle distance view in winter across fields and trees to high-sided vehicles, signage and tops of lighting columns on A465, from bus-stop on Swansea Road.<br>Glimpsed longer distance views from Heol Llwyn Brain, to tops of lighting columns on approach to A465 Taf Fechan viaduct and view of viaduct with traffic.<br>Close glimpsed views, through and above vegetation in summer, and filtered in winter, from route approaching underpass below A470, to traffic, lighting columns and signage on A470 approaching junction with A465 in foreground. | <u>Construction</u><br>Close and middle distance views of A465 construction activities including major earthworks activities associated with the Baverstock cutting. Route would however, be closed and / or re-routed for part of construction period. Close views of Taf Fawr viaduct structures construction from east section of cycle route.<br>The magnitude of impact would be **major adverse**. | **Very large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **major adverse**. | **Large adverse** |
| | | | | <u>Operation</u><br>Cycle route re-routed along new Swansea Road. Close and middle distance views of A465 and Swansea Road, with associated traffic flow and highway infrastructure, **including a variable message sign and other signage**, from west part of cycle route. Baverstock cutting highly visible. Close views of Taf Fawr viaduct structures from east section of cycle route.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | <u>Summer Year 15</u><br>Some screening of A465 by established mitigation planting, but close and middle distance views of parts of the A465 and Swansea Road, with associated traffic flow and highway infrastructure would remain for west part of cycle route. Close views of Taf Fawr viaduct structures from east section of cycle route would remain.<br>The magnitude of impact would be **major adverse**. | **Large adverse** |
| S5-A3<br>(180 ha) | Countryside and Rights of Way Act Open Access Land, also allocated as Cilsanws Open Space. | 230 m | Descending panoramic middle distance to distant views across moorland south-west to north-east. Distant glimpses of A465 as it descends from Baverstock ridge to south-west. A465 Taf Fawr Viaduct, A470 junction and A470 approach to junction, including traffic and lighting columns visible to south-west, with fields with hedgerows and trees within BBNP, Gellideg and Mynydd Aberdar in background. Merthyr Tydfil, Y Graig woodland and Gurnos against a mountainous | <u>Construction</u><br>Descending middle to longer distance views south-west to construction of A470 junction, including major earthworks and loss of vegetation, construction of elevated A465 mainline and highway infrastructure. Also distant glimpses of construction of A465 mainline at Baverstock ridge. Longer distance views south-east to demolition of Trade Centre Wales and construction of expanded Prince Charles Hospital junction and, offline and widened A465 mainline including major earthworks activities associated with attenuation ponds near Gurnos Farm and embankments to mainline and attenuation pond access roads. Visibility of works exacerbated by loss of existing roadside vegetation and adjacent mature tree belts.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |

| Reference number[2] with length / area of PRoW / space affected in brackets | PRoW number or land name and designation | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| | | | background to south-east. Tree-belt along A465 clearly visible in middle distance views east, with glimpses of traffic in summer and filtered views of traffic through trees in winter. Views south-west framed by trees, across wooded Taf Fawr valley to fields with hedgerows and trees within BBNP. A465 Taf Fawr Viaduct and A470 junction in middle distance, including traffic and lighting columns. | <u>Operation</u><br>Descending middle to longer distance views south-west to traffic flow on A470 junction, including elevated A465 mainline, as well as highway infrastructure such as signage, lighting columns / light spill. Slight change to skyline at Baverstock ridge and distant glimpses of traffic visible. Longer distance views of offline and widened A465 mainline, with associated traffic flow and highway infrastructure, to south-east and embankments associated with attenuation ponds and associated access roads near Gurnos Farm, and A465 main line. Part of mainline through Y Graig screened by cutting and existing trees. Also views of traffic and highway infrastructure, such as signage, lighting columns / light spill at expanded Prince Charles Hospital junction, opened up by loss of trees. **Glimpses of variable message sign near A470 / A4054 junction.**<br>The magnitude of impact would be **moderate adverse.** | **Moderate adverse** | <u>Summer Year 15</u><br>Established mitigation planting would screen attenuation pond at A470 junction and generally soften views of junction to south-west to some extent, though traffic flow on elevated A465 and parts of junction slips would remain visible. Established mitigation planting, in combination with localised cutting and existing vegetation, would generally screen longer distance views to A465 mainline, though some filtered glimpses of attenuation ponds near Gurnos Farm and tops of vehicles would remain. Longer distance to distant views of Prince Charles Hospital junction would also be softened and partially obscured by established mitigation planting, though some glimpses of traffic and tops of lighting columns /light spill would remain. **Glimpses of variable message sign near A470 / A4054 junction would remain.**<br>The magnitude of impact would be **minor adverse.** | **Slight adverse** |
| S5-A7<br>(19.6 ha) | Countryside and Rights of Way Act Open Access Land and natural / semi natural greenspace at Y Graig. | 0 m | Close intermittent views north of A465 and traffic although screening is provided by mature roadside vegetation and scattered trees and scrub. Development at Gurnos and Cefn Coed visible in close and middle distance views to east and west respectively. A465 rising up to the Baverstock ridge visible in distance to the west with hills of the BBNP forming the backdrop to the north and north-west. | <u>Construction</u><br>The proposed scheme would cut across the area and construction of the A465 would be highly visible in close and middle distance views to north and south. This would include views of major earthworks activities associated with the attenuation pond between chainages 11650 and 11760 south side and embankments / cuttings to mainline and attenuation pond access roads. Visibility of works would be exacerbated by loss of existing roadside and other existing vegetation.<br>The magnitude of impact would be **major adverse**. | **Very large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Large adverse** |
| | | | | <u>Operation</u><br>The A465 would be largely screened by cutting to the north-east / south - east. Some close oblique views into the cutting would however, be possible with the road and associated traffic flow and highway infrastructure**, including a variable message sign**, visible. The A465 and associated traffic flow and highway infrastructure would be prominent to the north-west / south-west where on slight embankment. Embankments associated with the attenuation pond and access roads would also be visible in close and middle distance views.<br>Some longer distance and distant views to the west of the A470 junction with associated infrastructure including light columns / light spill, and the A465 as it rises up to the Baverstock ridge.<br>The magnitude of impact would be **moderate adverse**. | **Large adverse** | <u>Summer Year 15</u><br>Established mitigation planting would provide effective screening to the A465 in close and middle distance views to the north-west / south-west where it is on slight embankment. The attenuation pond would also be screened by planting although the pond access roads would remain visible. The longer distance and distant views to the west of the A470 junction and the A465 as it rises up to the Baverstock ridge would remain. Visibility of the highway infrastructure would however, be reduced by established mitigation planting in those areas.<br>Close and middle distance views to north, south, south-west and above of A465 and widened Taf Fechan viaduct, with associated traffic flow and highway infrastructure would remain in long term.<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |

| Reference number[2] with length / area of PRoW / space affected in brackets | PRoW number or land name and designation | Approx. distance from nearest point of receptor to centre line of proposed A465 alignment | Existing view | Change in view and magnitude of impact without mitigation planting | Significance of effect without mitigation planting | Change in view and magnitude of impact with mitigation planting | Significance of effect with mitigation planting |
|---|---|---|---|---|---|---|---|
| S5-A13<br>(PRoW 2.4 km)<br>(NCR 46 1 km)<br>(Open space 9.6 ha)<br>(Open Access Land 2.5 ha) | Penywern Ponds North open space, and PRoW north of A465 / east of Francis Terrace and Pant Road (including footpaths 105/2, 105/4, 105/5. 105/7, 105/8, 105/9 and 105/10, and NCR 46). Merthyr Common Countryside and Rights of Way Act Open Access Land, all south of substation access road. | 0 m | Views across open space with existing grassland and trees and Penywern Pond (north). Development visible beyond with hills in the distance. Close and middle distance intermittent views to the south of A465 and traffic. | <u>Construction</u><br>Close views of construction of A465 and Dowlais junction eastbound egress slip road, together with major earthworks activities associated with embankment formation. Visibility of construction exacerbated by loss of existing roadside vegetation on north side of road. New NMU crossing overbridge construction also visible. Construction intermittently visible to varying degrees in middle distance to distant views looking south from higher ground.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** |
| | | | | <u>Operation</u><br>Partly elevated A465 and Dowlais junction slip road, with associated traffic flow and highway infrastructure, including new NMU overbridge, most prominent in close views but also intermittently visible to varying degrees in middle distance to distant views looking south from higher ground. **Environmental barriers also visible on both sides of the road e.g. in vicinity of Jones Street.**<br>The magnitude of impact would be **moderate adverse**. | **Moderate adverse** | <u>Summer Year 15</u><br>Intermittent close views of partly elevated A465 and Dowlais junction slip road, with associated traffic flow and highway infrastructure, including new NMU overbridge, would remain although established mitigation planting on embankments would provide some effective screening. **Environmental barriers would be partly screened.**<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |
| S5-A14<br>1.9 km<br>(13.7 ha) | Penywern Ponds South open space, and associated PRoW (including footpaths 102/1, 102/2, 102/3, 102/4, 102/5, 102/6, 102/8, 102/10 and 102/11). | 0 m | Views across open space with existing grassland and trees and Penywern Pond (south). Development visible beyond with hills in the distance. Close and middle distance intermittent views to the north of A465 and traffic. | <u>Construction</u><br>Close and middle distance views of construction of A465 and Dowlais junction westbound access slip road, together with major earthworks activities associated with embankment formation. Visibility of construction exacerbated by loss of existing roadside vegetation on south side of road. Demolition of stables also visible. Construction of the Dowlais junction A465 viaduct visible to the east and new NMU crossing overbridge construction visible to the north-west.<br>The magnitude of impact would be **major adverse**. | **Large adverse** | <u>Winter Year 1</u><br>As per operation without mitigation planting.<br>The magnitude of impact would be **moderate adverse**. | **Large adverse** |
| | | | | <u>Operation</u><br>Partly elevated A465 and Dowlais junction slip road and viaduct, with associated traffic flow and highway infrastructure, prominent in close and middle distance views. **3 m high environmental barrier along south side of mainline would be prominent to the north** but would also screen some of the traffic. New NMU overbridge would also be visible.<br>The magnitude of impact would be **moderate adverse**. | **Large adverse** | <u>Summer Year 15</u><br>Intermittent close and middle distance views of partly elevated A465 and Dowlais junction slip road and viaduct, with associated traffic flow and highway infrastructure including environmental barrier**s**, would remain although established mitigation planting on embankments would provide some effective screening. The new NMU overbridge would also be intermittently visible.<br>The magnitude of impact would be **minor adverse**. | **Slight adverse** |

# Changes to Appendix 10H – Visual Effects Schedule: People at Work

**The table rows contained within this document are complete replacements of the corresponding table rows published in the July 2017 Environmental Statement Volume 2 Appendix 10H. Text amendments are shown in red bold ink. There are no further changes to Appendix 10H as published in July 2017.**

**Table 10H.1 : Visual effects schedule: people at work with moderate sensitivity to change**

**Value / sensitivity to change: Moderate**

# Changes to Appendix 10I – Landscape Assessment

**The table rows contained within this document are complete replacements of the corresponding table rows published in the July 2017 Environmental Statement Volume 2 Appendix 10I. Text amendments are shown in red bold ink. There are no further changes to Appendix 10I as published in July 2017.**

**Table 10I.3 : Landscape assessment**

| Key features of proposed scheme and approximate chainages (ch.) (m) | Assessment of landscape impacts and effects during construction and operation without landscape mitigation | Assessment of landscape impacts and effects during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| **Brecon Beacons National Park - landscape sensitivity: high (Note: includes part of the Fforest Fawr Geopark)** | | |
| The proposed scheme would cross the BBNP between ch. 4500 to 6650 and 10300 to 10870.<br>It would be largely online apart from between ch. 5000 to 5600 where it would be aligned up to 20 m east of the existing A465 and at the A470 junction where it would be up to 80 m north of the existing A465. The existing A465 would form the westbound access slip road as part of the grade separation of the A470 junction.<br>There would be sections on substantial embankments and in cuttings, with a particularly prominent cutting slope in the north west quadrant of the A470 junction.<br>Key features would include the new grade separated Croesbychan and A470 junctions and associated structures, slip roads and lighting, the Nant Moel and Nant Ffrwd overbridges and some retaining walls. The Nant Hir viaduct would lie adjacent to the BBNP at ch. 6700. There would be attenuation ponds adjacent to the main line at ch. 5600 north side and ch 6000 and 10750 south side. The Croesbychan junction would include an elevated environmental barrier 1 m in height and 485 m long. | <u>Construction</u><br>During construction the clearance of extensive established highway vegetation and adjacent woodland, including extensive areas of ancient woodland, and large scale earthworks within the construction footprint would have a direct adverse impact on localised parts of BBNP LCA 4. Waterfall Country and Southern Valleys (ch. 4500 to 6650) and BBNP LCA 8. Talybont and Taff Reservoir Valleys (ch. 10300 to 10900). This would be exacerbated by other construction activity and the moderate tranquillity of the BBNP in the vicinity of the A465 would be reduced. Construction activity associated with embankments and elevated elements of the junctions would be particularly prominent in characteristic long views from higher parts of the BBNP further to the north. The BBNP's 'special qualities' of peace and tranquillity, sense of place and high scenic quality, would be locally eroded.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **very large adverse** (on local part of BBNP). | <u>Operation winter year 1</u><br>Landscape ground modelling of the engineering embankments would slightly soften their impact. Finishes to bridge abutments forming part of the grade separation of the A470 junction and landscape ground modelling of the engineering embankments / cuttings would accentuate the role of the junction as a gateway to the BBNP and assist in integrating the proposed scheme into the landscape. Architectural input to the design of the Taf Fawr viaducts would enhance the contribution they make to the gorge landscape on the edge of the BBNP. The A465 would remain prominent and the moderate tranquillity of the BBNP in the vicinity of the A465 would be reduced by the new highway infrastructure including lighting, **the variable message sign and other** signage etc. and traffic particularly at the Croesbychan and A470 junctions. The BBNP's 'special qualities' of peace and tranquillity, sense of place and high scenic quality, would be locally eroded.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse** (on local part of BBNP). |
| | <u>Operation</u><br>The offline sections of the proposed scheme would introduce new highway infrastructure including lighting, **a variable message sign (near A470 / A4054 junction) and other** signage etc. and traffic into localised parts of BBNP LCA 4. Waterfall Country and Southern Valleys and BBNP LCA 8. Talybont and Taff Reservoir Valleys. The dualling of online sections of the A465 would significantly increase the existing highway infrastructure footprint of the road, particularly at the new junctions. Sections of the proposed scheme on embankments would be particularly prominent and the moderate tranquillity of the BBNP in the vicinity of the A465 would be reduced by the new highway infrastructure and traffic. The removal of established highway vegetation and adjacent woodland, including extensive areas of ancient woodland, would increase the prominence of the A465 and disrupt the existing pattern of mature vegetation, particularly along the Nant-moel, the Nant Ffrwd and Pwll Annie. Overall the proposed scheme would have a linear urbanising effect on the rural character of the BBNP LCAs. The BBNP's 'special qualities' of peace and tranquillity, sense of place and high scenic quality, would be locally eroded.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse** (on local part of BBNP). | <u>Operation summer year 15</u><br>Extensive tree and shrub planting would establish on the landscape ground modelling to effectively integrate parts of the proposed scheme in the vicinity of the Croesbychan junction into the landscape and locally reduce the prominence of the A465. The combination of architectural finishes and planting would have some beneficial impact on landscape amenity. The established planting would also partly mitigate the loss of existing vegetation and complement the existing pattern of mature vegetation. The extensive loss of loss of ancient woodland however, could not be mitigated. The road would remain prominent to the north of the Croesbychan junction and at the A470 junction. The open treatment of parts of the road to the north of the Croesbychan junction would allow extensive and attractive views to be experienced by the road users. There would be some significant residual adverse effects on the moderate tranquillity of the BBNP in the vicinity of the A465 and landscape character. The BBNP's 'special qualities' of peace and tranquillity, sense of place and high scenic quality, would be locally eroded.<br>Magnitude of impact: moderate adverse.<br>Significance of landscape effects: **large adverse** (on local part of BBNP). |
| **Rhondda Cynon Taf SLAs - landscape sensitivity: high (Note: includes part of the RCTCBC Cynon Valley River Park)** | | |
| The proposed scheme would cross the SLA between ch. 3500 to 4600 and 6700 to 8400. It would include sections on substantial embankments and in deep cutting.<br>Key features would include the Baverstock junction and its associated structures, slip roads and lighting, new side road links to the north-east | <u>Construction</u><br>During construction the clearance of extensive established highway vegetation and adjacent woodland, including ancient woodland at Nant Hir and coniferous forest, and large scale earthworks within the construction footprint would have a direct adverse impact on the SLA. This would be exacerbated by other construction activity and the tranquillity of the SLA would be reduced. Construction activity associated with embankments and elevated elements of the road would be particularly prominent and in | <u>Operation winter year 1</u><br>Sensitive treatment of the Baverstock cutting slopes would accentuate the exposed geology and create drama and interest along part of the proposed scheme within the SLA. Overall however, the A465 would remain prominent and tranquillity would be reduced by the new highway infrastructure including lighting**, a variable message sign and other** signage etc. and traffic. The proposed tree and shrub planting at the Baverstock junction would have little |

| Key features of proposed scheme and approximate chainages (ch.) (m) | Assessment of landscape impacts and effects during construction and operation without landscape mitigation | Assessment of landscape impacts and effects during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| and south-east of the Baverstock junction and the new Swansea Road running parallel to the mainline to the south. Other structures would include the Afon Cynon bridge, the Tramway footbridge, the Vale of Neath bridge and the Nant Hir viaduct.<br>There would be attenuation ponds on the south side of the A465 at ch. 3650 to 3900, 4250, 6750 and 7000, south side. Additional attenuation ponds would also be included on the south side of the Cwmynysminton Road (side road) and the south side of the Baverstock junction. | the vicinity of Penmoelallt Forest substantial 'raw' cut faces would be visible from the east and west. Away from the A465 perpendicular to its alignment in the vicinity of Penmoelallt Forest, the cutting and remaining coniferous forest would reduce the influence of construction.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | impact at this stage.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| | Operation<br>The proposed scheme would introduce new highway infrastructure including lighting, a **variable message sign and other** signage etc. and traffic into the SLA and significantly increase the existing highway infrastructure footprint of the road, particularly at the Baverstock junction. Sections of the proposed scheme on embankments would be particularly prominent and the moderate tranquillity of the SLA would be reduced by the new highway infrastructure and traffic. The removal of established highway vegetation and adjacent woodland, including ancient woodland at Nant Hir and established coniferous forest, would increase the prominence of the A465 and disrupt the existing pattern of mature vegetation in the SLA. Overall the proposed scheme would have a linear urbanising effect on the rural character of the SLA and detract from its role in providing a setting to the BBNP.<br>Magnitude of impact: moderate adverse.<br>Significance of landscape effects: **large adverse**. | Operation summer year 15<br>Extensive tree and shrub planting would establish on the east side of the Baverstock junction to partly integrate parts of the proposed scheme into the landscape and locally reduce the prominence of the junction within the SLA. The planting would also partly mitigate the loss of existing coniferous forest. The loss of ancient woodland however, could not be mitigated. While the cutting slopes would continue to accentuate the exposed geology and provide drama and interest along part of the proposed scheme, particularly as some vegetation establishes on the cut faces and ledges, the substantial notch in the landscape would remain and there would be significant residual adverse effects on tranquillity and landscape character in the SLA and detract from its role in providing a setting to the BBNP.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| **Penmoelallt Forest (forestry) - landscape sensitivity: moderate** | | |
| The proposed scheme would cross the local LCA between ch. 7800 to 8400 as an online dualling and include sections in deep cutting.<br>Key features would include new side road links to the north-east and south-east of the Baverstock junction and the new Swansea Road running parallel to the mainline to the south. | Construction<br>During construction the clearance of established coniferous forest and large scale earthworks within the construction footprint would have a direct adverse impact on part of the local LCA. This would be exacerbated by other construction activity and the moderate tranquillity in the local LCA would be reduced. Construction activity associated with the substantial cutting would be particularly prominent with substantial 'raw' cut faces being visible from the east and west. Away from the A465 perpendicular to its alignment, the cutting and remaining coniferous forest would reduce the influence of construction.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | Operation winter year 1<br>Sensitive treatment of the cutting slopes would accentuate the exposed geology and create drama and interest along this part of the proposed scheme. The A465 would however, remain prominent from the east and west and the moderate tranquillity in the local LCA would be reduced by the new highway infrastructure including lighting, **a variable message sign and other** signage etc. and traffic. The proposed tree and shrub planting at the Baverstock junction would have little impact at this stage.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| | Operation<br>The dualling of the A465 and the introduction of the parallel Swansea Road would significantly increase the existing highway infrastructure footprint of the road. The deep cutting would create a substantial notch in the existing landform and geology and create a large 'scar' in the landscape. The removal of established coniferous forest would affect the forest character of the LCA. The moderate tranquillity in the local LCA would be reduced by the new highway infrastructure including lighting, **a variable message sign and other** signage etc. and traffic although, away from the A465 perpendicular to its alignment, the cutting and remaining coniferous forest would reduce the influence of the proposed scheme. Overall the proposed scheme would have a linear urbanising effect on the forested character of this local LCA. The setting of this local LCA would also be affected by the substantial new junction at Baverstock and associated infrastructure and lighting immediately to the west.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | Operation summer year 15<br>Extensive tree and shrub planting would establish on the east side of the Baverstock junction to partly integrate parts of the proposed scheme into the landscape and locally reduce the prominence of the junction. The planting would also partly mitigate the loss of existing coniferous forest. While the cutting slopes would continue to accentuate the exposed geology and provide drama and interest along this part of the proposed scheme, particularly as some vegetation establishes on the cut faces and ledges, the substantial notch in the landscape would remain and there would be significant residual adverse effects on tranquillity and landscape character.<br>Magnitude of impact: moderate adverse.<br>Significance of landscape effects: **moderate adverse**. |

| Key features of proposed scheme and approximate chainages (ch.) (m) | Assessment of landscape impacts and effects during construction and operation without landscape mitigation | Assessment of landscape impacts and effects during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| **Taf Fawr (gorge) - landscape sensitivity: high (Note: includes part of the Cefn Coed Cemetery Registered Park and Garden)** | | |
| The proposed scheme would cross the local LCA between ch. 10700 to 10900.<br>Key features would include the A470 underbridge, the Taf Fawr mainline, eastbound access and westbound egress slip road viaducts forming part of the grade separation of the A470 junction.<br>There would be an attenuation pond adjacent to south roundabout in the south-east quadrant of the junction. | Construction<br>During construction the clearance of extensive established highway vegetation and adjacent woodland, including ancient woodland, and large scale earthworks within the construction footprint would have a direct adverse impact on part of the local LCA. This would be exacerbated by other construction activity and the tranquillity of the gorge would be eroded. Construction activity associated with the substantial viaduct and other structures would be particularly prominent.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **very large adverse**. | Operation winter year 1<br>Architectural input to the design of the Taf Fawr viaducts would enhance the contribution they make to the gorge landscape. The A465 would however, remain prominent and tranquillity would be reduced by the new highway infrastructure including lighting, **the variable message sign and other** signage etc. and traffic.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| | Operation<br>The dualling of the A465 and the introduction of the A470 junction slip roads and viaducts and other structures would significantly increase the existing highway infrastructure footprint of the road and the tranquillity of the gorge would be eroded by the new highway infrastructure including lighting, **a variable message sign (near A470 / A4054 junction) and other** signage etc. and traffic. The removal of established highway vegetation and adjacent woodland would increase the prominence of the A465 and disrupt the existing pattern of mature vegetation and fields, particularly along the A465, A470 and the gorge. Overall the proposed scheme would have an urbanising effect on the unique character of the local LCA. It would also result in some landtake of the Cefn Coed Cemetery Registered Park and Garden and impact on the setting of the iconic listed Cefn Coed Viaduct. These impacts are examined in more detail in Chapter 8: Cultural Heritage.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | Operation summer year 15<br>Architectural input to the design of the Taf Fawr viaducts would enhance the contribution they make to the gorge landscape. The loss of ancient woodland could not be mitigated and there is limited scope for mitigating the loss of other existing vegetation in the immediate area. The scale of the structures and the prominence of the traffic on them, means that there would be significant residual adverse effects on tranquillity and landscape character.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| **Taf Fechan (gorge) - landscape sensitivity: high** | | |
| The proposed scheme would cross the local LCA between ch. 11400 to 12300.<br>It would include an offline section between ch.11700 to 12300. Some sections would be on embankment and in deep cutting.<br>Key features would include the Taf Fechan viaduct widening. There would be attenuation ponds adjacent to the main line at ch.11650, south side and ch. 12300 to 12500 north side. | Construction<br>During construction the clearance of extensive established highway vegetation and adjacent woodland, including ancient woodland and TPO woodland, and large scale earthworks within the construction footprint would have a direct adverse impact on part of the local LCA. This would be exacerbated by other construction activity and the tranquillity of the gorge would be eroded. Construction activity associated with the viaduct widening would be particularly prominent.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **very large adverse**. | Operation winter year 1<br>Architectural input to the design of the Taf Fechan viaduct would ensure that the new widened structures complement the adjacent existing arched structure and enhance the contribution it makes to the gorge landscape. The A465 would however, remain prominent and tranquillity would be reduced by the new highway infrastructure, **including a variable message sign**, and traffic. The proposed tree and shrub planting in the east part of this section would have little impact at this stage.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| | Operation<br>The dualling of the A465 including an offline section with the introduction of a new viaduct adjacent to the existing one, would significantly increase the existing highway infrastructure footprint of the road and the tranquillity of the gorge would be eroded by the new highway infrastructure, **including a variable message sign**, and traffic. The removal of established highway vegetation and adjacent woodland, including ancient woodland and TPO woodland, would increase the prominence of the A465 and disrupt the existing pattern of mature vegetation along the A465 and the gorge. Overall the proposed scheme would have an urbanising effect on the unique character of a localised part of the local LCA. It would also impact on the setting of heritage features in the gorge. This examined in more detail in Chapter 8: Cultural Heritage. | Operation summer year 15<br>Architectural input to the design of the Taf Fechan viaduct would ensure that the new structure complements the adjacent existing arched structure and enhance the contribution it makes to the gorge landscape. The proposed tree and shrub planting in the east part of this section would establish to integrate this part of the proposed scheme into the landscape and partly mitigate the loss of existing vegetation. The loss of ancient woodland could not be mitigated. There would be significant residual adverse effects on tranquillity and landscape character.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. |

| Key features of proposed scheme and approximate chainages (ch.) (m) | Assessment of landscape impacts and effects during construction and operation without landscape mitigation | Assessment of landscape impacts and effects during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| | Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | |
| **Merthyr Tydfil (built land) - landscape sensitivity: moderate** | | |
| The proposed scheme would cross the local LCA between ch. 10900 to 11400 and 12300 to 17500.<br>Key features would include the Cefn Coed High Street, the Prince Charles Hospital junction overbridge, and its associated roundabout, slip roads and lighting, the Bryniaui Road overbridge, the Pant Road and Jones Street underbridges, the reservoir footbridge and the Dowlais junction and its associated structures, slip roads and lighting.<br>There are also various retaining walls, required to accommodate the proposed scheme where the urban corridor narrows and attenuation ponds at the Prince Charles Hospital junction and adjacent to the main line at ch.14250, south side. | Construction<br>During construction the clearance of extensive established highway vegetation, within the construction footprint would have a direct adverse impact on part of the local LCA and profoundly affect the setting of the A465 within the Merthyr townscape. This would be exacerbated by other construction activity and the construction of structures such as the Cefn Coed High Street and Galon Uchaf overbridges would be particularly prominent. Demolition of Trade Centre Wales would have a minor impact on townscape pattern.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | Operation winter year 1<br>Finishes to bridge abutments, landscape ground modelling of the engineering embankments and sensitive treatment of the cutting slopes to accentuate the exposed geology and create interest along parts of the proposed scheme would all complement the sense of place of the A465 as it passes through the Merthyr townscape. Splayed widening either side of the Cefn Coed High Street overbridge would allow for an element of public realm to be introduced and improve the sense of separation between the High Street and the A465. The proposed tree and shrub planting, carried out where space allows, would have little impact at this stage and the A465 widening, with its new highway infrastructure including lighting, **variable message signs and other** signage etc. and traffic, in the often narrow urban corridor would remain prominent. Slight impacts on the existing townscape pattern would also remain.<br>Magnitude of landscape impact: major adverse.<br>Significance of landscape effects: **large adverse**. |
| | Operation<br>The dualling of the A465 would significantly increase the existing highway infrastructure footprint of the road as it passes through the Merthyr townscape. **New highway infrastructure including variable message signs and other signage would also be introduced.** The removal of established highway vegetation would increase the prominence of the A465 and profoundly change the setting of the A465. While cuttings with retaining walls, such as those east and west of the Cefn Coed High Street overbridge, would reduce the prominence of the road they would also impact geology and existing exposed rock faces. The roundabout and slip roads associated with the Prince Charles Hospital junction and the removal of Trade Centre Wales would have a slight impact on the existing townscape pattern on the north side of the A465 in Pant Industrial Estate and on the south side along the Gurnos Ring Road and Rocky Road. The elevated mainline crossing the new grade separation of the Dowlais junction would be prominent and would cross an area of open land between the existing east and west bound carriageways of the A465. The existing highway infrastructure at this junction is however, already extensive.<br>Magnitude of impact: major adverse.<br>Significance of landscape effects: **large adverse**. | Operation summer year 15<br>Extensive tree and shrub planting around the Prince Charles Hospital and Dowlais junctions would establish to partly integrate the proposed scheme into the townscape and reduce the prominence of the A465. Elsewhere the A465 widening would take place in the often narrow urban corridor where opportunities for screen planting would be limited.<br>Magnitude of landscape impact: major adverse.<br>Significance of landscape effects: **moderate adverse**. |

# Changes to Appendix 10J – Night Skies Assessment

**The table rows contained within this document are complete replacements of the corresponding table rows published in the July 2017 Environmental Statement Volume 2 Appendix 10J. Text amendments are shown in red bold ink. There are no further changes to Appendix 10J as published in July 2017.**

**Table 10J.1: Night skies assessment**

| Key features of proposed scheme that would affect the night skies | Assessment of impacts on night skies during construction and operation without landscape mitigation | Assessment of impacts and effects on night skies during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| Environmental Zone E0 - High sensitivity **(Core Zone of the BBNP International Dark Sky Reserve)** | | |
| The proposed scheme **mainline** is within approximately **230 m** of the Environmental Zones E0 at the closest point, near Nant Hir viaduct.<br>The proposed partially lit Baverstock junction and A470 junction would be located **approximately** within 1 km and 1.2 km respectively, from areas within this zone.<br>**A variable message sign would be located near the A470 / A4054 junction within approximately 175 m of this zone.** | Construction<br>The construction of the scheme would result in additional glare from headlight movements of construction vehicles during the hours of darkness, along haul routes on the A465 south of the Dark Sky Core Zone of the BBNP International Dark Sky Reserve. While there would be some loss of vegetation, intervening vegetation would remain between the road and the Core Zone, such as the extensive forest at Penmoelallt, which would reduce the impact of direct glare. Construction works for the scheme might have to be undertaken during the hours of darkness, which would require lighting. This would result in additional glare and light spill affecting the night skies. The exact locations of works required to be undertaken during the hours of darkness are not known. However, any such impact on the night skies would only cause a temporary effect, and would have a relatively localised effect within the wider Dark Sky Core Zone of the BBNP International Dark Sky Reserve.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **moderate adverse.** | Operation winter year 1<br>As mitigation planting would not be established there would be glare from headlights on the road and additional lighting columns at the Baverstock and A470 junctions would cause some localised additional glare from outside the Core Zone. However, the use of dynamic systems of operation would provide the minimum amount of light required at different times, reducing the strength and duration of glare. In addition, the use of LEDs with appropriate cut off would prevent light spill from the junctions from affecting the night skies in the Core Zone of the BBNP International Dark Sky Reserve.<br>Magnitude of impact on the night skies: negligible adverse.<br>Significance of effect on the night skies: **slight adverse.** |
| | Operation<br>The widened and slightly realigned A465 would bring traffic with headlights slightly further north, towards the Core Zone, between chainage 5900 and 8100 approximately. Loss of vegetation would make headlights on the road slightly more visible. However, smaller woodlands and tree belts within the BBNP and significant forest at Penmoelallt would limit direct glare reaching the Core Zone.<br>The proposed grade separated junctions at Baverstock and the A470 would be partially lit. While the existing junctions are fully lit, the light spill from proposed lighting columns at these larger junctions would cause some additional glare and sky glow which would be likely to impact on localised parts of the Core Zone. However, lighting would be removed from the section of the A465 between these two junctions. This would reduce direct glare and sky glow impacting a localised part of the Core Zone, to the north of this section of road. **The variable message sign (near A470 / A4054 junction) would only have a very slight impact on the Core Zone of the BBNP International Dark Sky Reserve.**<br>Magnitude of impact on the night skies: minor adverse. Significance of effect on the night skies: **slight adverse**. | Operation summer year 15<br>Woodland and hedgerow mitigation planting would have established and would provide some localised screening of headlights along the A465, as well as some luminaires on light columns at the Baverstock and A470 junctions. Although some direct glare might still influence the Core Zone **of the BBNP International Dark Sky Reserve** it would not be significant.<br>Magnitude of impact on the night skies: no change.<br>Significance of effect on the night skies: **neutral.** |

| Key features of proposed scheme that would affect the night skies | Assessment of impacts on night skies during construction and operation without landscape mitigation | Assessment of impacts and effects on night skies during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| Environmental Zone E1 in Eastern Part of Study Area – Moderate sensitivity **(Includes Taf Fawr Valley which is part of the Critical Buffer Zones of the BBNP International Dark Sky Reserve)** | | |
| The proposed partially lit A470 junction, incorporating the Taf Fawr viaducts, would be located within Zone E1.<br>However, the currently lit A465 mainline between Baverstock and the A470 is proposed to be unlit.<br>**A variable message sign would be located near the A470 / A4054 junction within this zone.** | <u>Construction</u><br>The construction of the scheme would result in additional glare from headlight movements of construction vehicles during the hours of darkness, along haul routes on the A465 which pass through the southernmost tip of the Zone E1 in the BBNP International Dark Sky Reserve. While the loss of vegetation would make this glare slightly more visible, the effect on the night skies in this part of the BBNP would be relatively limited due to the existing influence of lighting from columns along the A465 between the Baverstock junction and the Lower Vaynor Road junction. Construction works for the scheme might have to be undertaken during the hours of darkness, which would require lighting. This would result in additional glare and light spill affecting the night skies. The exact locations of works required to be undertaken during the hours of darkness are not known. **The impacts on the night skies would be temporary and relatively limited due to the influence of existing lighting.**<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse.** | <u>Operation winter year 1</u><br>As woodland and hedgerow mitigation planting would not be established there would be glare from headlights within the wider road corridor and the effect of additional lighting at the A470 junction. However, the use of dynamic systems of operation would provide the minimum amount of light required at different times, reducing the strength and duration of glare. In addition, the use of LEDs with appropriate cut off would also significantly reduce the light spill within this part of Zone E1 of the BBNP International Dark Sky Reserve.<br>Magnitude of impact on the night skies: **no change.** Significance of effect on the night skies: **neutral.** |
| | <u>Operation</u><br>There would be glare from headlights from traffic within a much wider road corridor than existing directly within the Zone E1, and also noticeably to the south-west, where the A465 and new link road to Swansea Road would descend in parallel from the Baverstock Ridge. Due to the upgrading of the A470 junction, including a new roundabout north of the proposed mainline and existing A465, there would be some additional lighting introduced within this part of the Zone E1. The mainline would, however, be unlit between the Baverstock junction and the eastern extent of the scheme, which would reduce the overall extent of lighting currently influencing the night skies in Zone E1. The existing retained surrounding vegetation, topography and proposed location of the A470 junction partially within cutting, would also contain the effect of the lighting on the night skies within a relatively localised part of Zone E1, which is already influenced by glare and light spill from road lighting, as well as light spill from Zone E3 in Merthyr Tydfil.<br>Magnitude of impact on the night skies: minor adverse. Significance of effect on the night skies: **slight adverse.** | <u>Operation summer year 15</u><br>Woodland and hedgerow planting at the A470 junction would have established and would provide some localised screening of glare from headlights and contain light spill from luminaires on columns.<br>Magnitude of impact on the night skies: no change. Significance of effect on the night skies: **neutral.** |
| Environmental Zone E2 in Central Part of Study Area – Moderate sensitivity | | |
| The proposed enlarged and more prominent Baverstock junction is proposed to be partially lit within Zone E2.<br>However, existing lighting would be removed on the A465 mainline between Baverstock and the A470.<br>**Two variable message signs would be located within this zone.** | <u>Construction</u><br>The construction of the scheme would result in additional glare from headlight movements of construction vehicles during the hours of darkness, along haul routes on the A465 within Zone E2. Loss of vegetation along the route would make glare from the traffic, including construction activities, more prominent, particularly due to the topography within this part of the scheme. Construction works for the scheme might have to be undertaken during the hours of darkness, which would require lighting. This would result in additional glare and light spill affecting the night skies. The exact locations of works required to be undertaken during the hours of darkness are not known. While any such impact on the night skies would only cause a temporary effect, they would be very prominent in the landscape due to the road ascending and descending from the Baverstock ridge within Zone E2.<br>Magnitude of impact on the night skies: moderate adverse.<br>Significance of effect on the night skies: **moderate adverse**. | <u>Operation winter year 1</u><br>As mitigation planting would not be established there would be glare from headlights and, glare and light spill from lighting columns at Baverstock junction, although glare form headlights would be reduced by the proposed false cutting along the southern edge of the A465 between Nant Hir viaduct and the Baverstock junction. In addition, the use of dynamic systems of operation would provide the minimum amount of light required at different times, reducing the strength and duration of glare. The use of LEDs with appropriate cut off would also significantly reduce the light spill affecting the night skies within Zone E2.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. |

| Key features of proposed scheme that would affect the night skies | Assessment of impacts on night skies during construction and operation without landscape mitigation | Assessment of impacts and effects on night skies during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| | Operation<br>Glare from headlights on the A465 between Nant Hir bridge and the Baverstock junction would be more prominent, due to the road being raised up on embankments. There would also be glare from headlights from traffic within a much wider road corridor within Zone E2 between the Baverstock junction and A470 junction, in particularly where the A465 and new link road to Swansea Road would run in parallel. However, the cutting slopes at the crest of the Baverstock ridge, would help to contain the glare to some extent.<br>Glare and light spill form the proposed lighting columns at the partially lit Baverstock junction would be particularly prominent due to the elevated positon in the landscape, although Penmoelallt forest would provide screening to the north. **The variable message signs would also add very slightly to the light impacts. Overall however, the light impacts** would to some extent be counter balanced by the removal of lighting from the A465 between Baverstock junction and the A470 junction.<br>Magnitude of impact on the night skies: moderate adverse.<br>Significance of effect on the night skies: **moderate adverse**. | Operation summer year 15<br>Woodland mitigation planting would provide some intermittent screening of glare from headlights along the route, but would generally not screen glare or light spill from lighting columns at Baverstock junction.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. |
| Environmental Zone E2 in Eastern Part of Study Area – Generally moderate sensitivity, with localised areas of moderate to low sensitivity | | |
| The proposed lit enlarged Prince Charles Hospital junction would encroach within the edge of Zone E2. **A variable message sign would be located within this zone.** | Construction<br>The construction of the scheme would result in additional glare from headlight movements of construction vehicles during the hours of darkness, along haul routes on the A465 within localised parts of Zone E2 at Y Graig and Dowlais Top; and on the edge of Zone E2 north of Gurnos and Galon Uchaf. Loss of vegetation along the route would make glare from the traffic, including construction activities, slightly more visible than existing. Construction works for the scheme might have to be undertaken during the hours of darkness, which would require lighting. This would result in additional glare and light spill affecting the night skies. The exact locations of works required to be undertaken during the hours of darkness are not known. However, any such impact on the night skies would only cause a temporary effect. There would be existing influence of lighting from the adjacent Zone E3 in Merthyr Tydfil.<br>Magnitude of impact on the night skies: moderate adverse.<br>Significance of effect on the night skies: **moderate adverse**. | Operation winter year 1<br>As the proposed intermittent woodland planting would not be established there would be glare from headlights on the A465 or glare and light spill from light columns at Prince Charles Hospital junction. However, the use of dynamic systems of operation would provide the minimum amount of light required at different times, reducing the strength and duration of glare. In addition, the use of LEDs with appropriate cut off would also significantly reduce the light spill affecting the night skies within Zone E2. As such the magnitude of impact on the night skies in Zone E2 would reduce to minor adverse in the short / medium term, although the night skies of the southern fringe of Zone E2 would appear as a slight extension of the adjacent Zone E3 night skies in Galon Uchaf, due to the lighting columns at Prince Charles Hospital junction.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. |
| | Operation<br>Glare from headlights on the realigned A465 through Y Graig would be slightly more prominent than at present, since there would no longer be a dense vegetation belt offering screening either side of the road. However, the cutting slopes either side of the road would offer some screening. Loss of vegetation along the A465 and the slightly more elevated traffic on embankments north of Gurnos and at Dowlais Top, including the elevated mainline through Dowlais junction, would also make glare form headlights more visible. In addition, there would be glare and light spill from light columns at the fully lit junction at Prince Charles Hospital, which would extend within the edge of Zone E2. **The variable message sign would also add very slightly to the light impacts. Overall there would be a** minor localised change to the characteristics of the night skies on the southern fringe of Zone E2 in this location, from low to medium district brightness. There would be existing influence of lighting from the adjacent Zone E3 in Merthyr Tydfil, particularly at Dowlais Top.<br>Magnitude of impact on the night skies: moderate adverse.<br>Significance of effect on the night skies: **moderate adverse**. | Operation summer year 15<br>Woodland planting would provide some intermittent screening of glare from headlights.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. |

| Key features of proposed scheme that would affect the night skies | Assessment of impacts on night skies during construction and operation without landscape mitigation | Assessment of impacts and effects on night skies during operation at winter year 1 and summer year 15 with landscape mitigation |
|---|---|---|
| Environmental Zone E3 – Moderate to low sensitivity | | |
| In the west, the A465 would be lit between Hirwaun Industrial Estate and Hirwaun Junction, where it is currently not lit. The elevated mainline is also proposed to be lit through Hirwaun junction.<br>In the east, the currently lit Prince Charles Hospital junction is proposed to be made larger, which would increase the amount of lighting at this junction.<br>**A variable message sign would be located within this zone.** | <u>Construction</u><br>The construction of the scheme would result in additional glare from headlight movements of construction vehicles during the hours of darkness, along haul routes on the A465 which pass along the fringes of the Zone E3 night skies in the Study Area. While the loss of vegetation along the route would make this glare slightly more visible, the effect on the night skies would be relatively limited due to the existing influence of lighting from built up areas within Zone E3. Construction works for the scheme might have to be undertaken during the hours of darkness, which would require lighting. This would result in additional glare and light spill affecting the night skies. The exact locations of works required to be undertaken during the hours of darkness are not known. However, any such impact on the night skies would only cause a temporary effect, and are also considered likely to cause a relatively limited effect on the night skies in Zone E1 if required, due to the existing influence of lighting.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. | <u>Operation winter year 1</u><br>As mitigation planting would not be established there would be glare from headlights, additional lighting to the west of Hirwaun junction and at Prince Charles Hospital junction, and more prominent lighting at Hirwaun junction. However, the use of dynamic systems of operation would provide the minimum amount of light required at different times, reducing the strength and duration of glare. In addition, the use of LEDs with appropriate cut off would also significantly reduce the light spill affecting the night skies within Zone E3.<br>Magnitude of impact on the night skies: negligible adverse.<br>Significance of effect on the night skies: s**light adverse**. |
| | <u>Operation</u><br>Glare from headlights on the widened A465 corridor would be slightly more noticeable than the current route due to loss of existing vegetation, particularly in locations where the mainline is proposed to be elevated, such as at Hirwaun junction. Additional lighting is proposed within Zone E3 to the west of Hirwaun junction and the elevated mainline through the junction is also proposed to be lit, making the lighting slightly more prominent than existing. **The variable message sign would also add very slightly to the light impacts. Overall** however, the additional lighting would bridge a short gap in lighting between the Hirwaun Industrial Estate and the built up area in Hirwaun and would not be out of keeping with the general character of the night sky in this area. Additional lighting is also proposed at Prince Charles Hospital junction within Zone E3 in the eastern part of the Study Area. There would be existing influence of lighting within Zones E3.<br>Magnitude of impact on the night skies: minor adverse.<br>Significance of effect on the night skies: **slight adverse**. | <u>Operation summer year 15</u><br>Proposed woodland mitigation planting would reduce glare from headlights along parts of the proposed scheme and would provide some screening for additional lighting to the west of Hirwaun junction and at Prince Charles Hospital junction, and more prominent lighting at Hirwaun junction.<br>Magnitude of impact on the night skies: negligible adverse.<br>Residual significance of effect on the night skies: **neutral**. |

# Appendix 11A: Site of Special Scientific Interest Compliance Report

**The sections contained within this document are complete replacements of the corresponding sections published in the July 2017 published Environmental Statement Volume 2 Appendix 11A. There are no further changes to Appendix 11A as published in July 2017.**

**Section 4.4.3.2 Operational phase impacts**

**Nitrogen oxides**

None of the Sites of Special Scientific Interest (SSSIs) within the 'affected roads' study area would experience an estimated annual average NOx concentration of over 30 µg/m³, the threshold as specified by HA 207/07 (Highways Agency, 2007) whereby vegetation would be significantly affected. Therefore, as per Interim Advice Notice 174/13 – Evaluation of Significant Local Air Quality Effects (Highways Agency, 2013), the modelled NOx concentrations (critical level) for the proposed scheme during its operation are unlikely to cause a likely significant effect on the SSSIs.

**Acid and nitrogen deposition**

Assessment of potential acid and nitrogen deposition (critical loads) modelled from proposed vehicle emissions using predicted traffic data was undertaken in ES supplement Chapter 8: Air Quality, specifically Appendix 8E in relation to Designated Sites.

Predicted traffic data for the proposed scheme was used to model the 'process contribution' of acid and nitrogen deposition on SSSIs with the proposed scheme in operation. This was undertaken as reported in ES Supplement Chapter 8: Air Quality, specifically Appendix 8E. The significance of the predicted long-term deposition at SSSIs was determined in line with guidance provided by the Environment Agency (Environment Agency, 2016); "Where the process contribution (PC) is less than 1% of the relevant critical level or critical load, the emission is not likely to have a significant effect alone or in combination irrespective of the existing concentrations or deposition rates". Table 4.3 and Table 4.4 below detail the modelled deposition rates of acid and nitrogen for SSSIs.

The modelled process contribution of the proposed scheme was less than 1% of the relevant critical load for all SSSIs modelled. Therefore, no significant adverse effect on the habitats of SSSIs due to acid or nitrogen deposition is considered likely.

(N.B. The PC/CL calculations have used the minimum CL for nitrogen deposition. The 1% result shown for Bryncarnau Grasslands has been rounded up to 1%, the actual figure is less than this. If the maximum critical load is used, the percentage increase is less than 1% at 0.5%).

**Table 4.3: Modelled air quality impact – operational phase – acid deposition**

| SSSI | Priority habitat | Critical Load (CL) CLMaxN | Estimated acid deposition (kEqH+/ha-year) | | |
|---|---|---|---|---|---|
| | | | Existing Deposition (ED) | Process Contribution (PC) | PC / CL (%) |
| Cors Bryn-y-Gaer | Acid grassland | 2.21 | 1.97 | 0.001 | 0.05% |
| Tir Mawr a Dderi Hir, Llwydcoed | Acid grassland | 1.77 | 1.81 | 0.009 | 0.74% |
| Bryncarnau Grassland, Llwydcoed | Acid grassland | 1.20 | 1.97 | 0.007 | 0.55% |

| SSSI | Priority habitat | Critical Load (CL) CLMaxN | Estimated acid deposition (kEqH+/ha-year) | | |
|---|---|---|---|---|---|
| | | | Existing Deposition (ED) | Process Contribution (PC) | PC / CL (%) |
| Cwm Glo a Glyndyrys | Acid grassland | 2.21 | 1.93 | 0.0002 | 0.02% |
| Cwm Taf Fechan Woodlands | Woodland | 2.04 | 2.66 | 0.002 | 0.11% |

**Table 4.4: Modelled air quality impact – operational phase – nitrogen deposition**

| SSSI | Priority habitat | Critical Load (CL) minimum | Critical Load (CL) maximum | Estimated nutrient N deposition (kgN/ha-year) | | |
|---|---|---|---|---|---|---|
| | | | | Existing Deposition (ED) | Process Contribution (PC) | PC / CL (%) |
| Cors Bryn-y-Gaer | Acid grassland | 10 | 20 | 27.6 | 0.02 | 0.2% |
| Tir Mawr a Dderi Hir, Llwydcoed | Neutral grassland | 20 | 30 | 27.6 | 0.12 | 0.6% |
| Bryncarnau Grassland, Llwydcoed | Acid grassland | 10 | 20 | 27 | 0.1 | 1% |
| Cwm Glo a Glyndyrys | Acid grassland | 20 | 20 | 27 | 0.01 | 0.1% |
| Cwm Taf Fechan Woodlands | Woodland | 10 | 20 | 37.2 | 0.03 | 0.3% |

### Section 4.4.6 Summary

In summary, the overall impacts on SSSIs are due to land take only. This is detailed in Table 4.5 below.

**Table 4.5: Summary of potential impacts on SSSIs as a result of the proposed scheme**

| Site | Approximate distance from proposed scheme | Potential impacts (taking into account design mitigation) |
|---|---|---|
| Cwm Taf Fechan Woodlands SSSI (also a Local Nature Reserve) | 0 km north and south | Direct loss of approximately 0.44 ha of habitat during construction |
| Tir Mawr a Dderi Hir, Llwydcoed SSSI | 0 km south-east | Direct loss of approximately 2.07 ha of grassland habitat during construction |

## 1. Introduction

Jacobs was commissioned by the Welsh Government to carry out ecological surveys for the proposed A465 Sections 5 and 6 Dowlais Top to Hirwaun scheme.

Phase 1 habitat surveys were undertaken for the proposed scheme in summer 2015. At this time the land plots north west of Croesbychan junction (see Figure 1) were not accessed directly, but were viewed from its boundary. The plots were noted as consisting of grassland with encroaching scrub, but with good species diversity. The presence of devil's-bit scabious *Succisa pratensis,* the favoured food plant of marsh fritillary *Euphydryas aurinia,* was also recorded.

Butterfly Conservation contacted Jacobs in summer 2017 with the report of live sightings of marsh fritillary butterfly and the results of a marsh fritillary habitat assessment for these plots. Land access was secured by Jacobs ecologists in September 2017 when an update of the phase 1 Habitat survey, a vegetation species list and follow up marsh fritillary surveys were undertaken.

### 1.1 Survey area

The survey area comprised of two fields to the north west of Croesbychan junction which are partially located under the footprint of the proposed scheme, as shown in Figure 1.

### 1.2 Scope of work

The scope of work, undertaken on 15 September 2017 comprised:

- an update of the existing Phase 1 Habitat survey;
- a representative vegetation species list;
- marsh fritillary *Euphydryas aurinia* habitat mapping (ground truthing exercise based on Butterfly Conservation survey); and
- marsh fritillary larval web search.

# 2. Methodology

## 2.1 Phase 1 habitat survey

A Phase 1 habitat survey was undertaken following standard best practice guidance (JNCC, 2010).

The survey consisted of a walkover of the study area (shown in Figure 1), mapping the habitats present and listing vascular plants within each habitat. Species abundance was based on the DAFOR scale (Dominant, Abundant, Frequent, Occasional and Rare). Species nomenclature followed Field Flora of the British Isles (Stace, 2010).

Notes were also taken, which included the type of management practices that were evident within each land plot.

## 2.2 Marsh fritillary habitat mapping

The mapping of the habitat quality of the land plots was undertaken according to monitoring methods used by Natural Resources Wales (NRW). Within each land plot a grid based recording method was used. The grid was set up using geographic information system (GIS) software (ArcGIS) in advance of the field visit. The sample points were set out on a 10 m x 10 m grid and were surveyed using a hand held computer (Mobile Mapper) with a global positioning system (GPS). The use of a fixed grid system can allow temporal assessment of changes in habitat quality at fixed points in subsequent years, if required.

At each sample point the habitat quality for the 10 m x 10 m square around the point was categorised according to habitat quality definitions below (Fowles & Smith, 2006) and recorded on the mapper.

- **Good Condition Habitat (GC)**: Grassland where, for at least 80% of the quadrat, the vegetation height is within the range of 12 to 25 cm, and devils-bit scabious is present within a 1 m radius. Scrub (>1 m tall) Cover <5%.
- S**uitable (Under-Grazed) Habitat (SU)**: Grassland where vegetation height is above 25 cm and *Succisa pratensis* is occasional / frequent / abundant. Or in which sward height is between 12-25 cm and *Succisa* at least occasional, but Scrub (>0.5 m tall) covers >5% of area.
- **Suitable (Over-Grazed) Habitat (SO)**: Grassland with frequent-abundant *Succisa* but which is currently over-grazed such that the sward is below 12 cm on average.
- **Suitable (Sparse) Habitat (SS)**: Grassland with sparse (occasional or rare) *Succisa* and vegetation height is less than 25 cm on average.
- **Potential (Rank) Habitat (PR)**: Grassland with rare *Succisa* but which is currently under-grazed or neglected such that the sward is above 25 cm on average and *Succisa* occurs as scattered plants in a rank, tussocky sward.
- **Scrub (SC)**: Scrub up to 3 m height.
- **Secondary Woodland (SW)**: Scrub, young trees etc. established to > 3 m height.
- **Not Suitable (NS)**: All other unsuitable habitat, not containing *Succisa*.

The DAFOR scale was used for recording the presence of devil's-bit scabious:

- dominant (D) - >75% cover;
- abundant (A) – 51-75% cover;
- frequent (F) – 26-50% cover;
- occasional (O) – 11-25% cover; and
- rare (R) – 1-10% cover.

### 2.3 Marsh fritillary larval web counts

Areas of suitable habitat for marsh fritillary were surveyed for marsh fritillary larval webs by examining devil's-bit scabious plants for larvae and evidence of larval webs. The location and number of webs were recorded using the mobile mapper.

### 2.4 Limitations

This report records flora and fauna found on the day of the site surveys. It does not record any plants or animals that may appear at other times of the year and were therefore not evident at the time of visit.

It should be acknowledged that the behaviour of animals can be unpredictable and may not conform to standard patterns recorded in scientific literature. Therefore, this report cannot predict with absolute certainty that animal species will occur in apparently suitable locations or habitats, or that they will not occur in locations or habitats that appear unsuitable.

The Phase 1 habitat survey was carried out towards the end of the recommended field survey meaning some plant species may not have been apparent or easily identifiable.

## 3. Results

### 3.1 Phase 1 habitat survey

The survey area was approximately 1.45 ha in size, and comprised two fields and a house with garden to the south. The survey area was surrounded by woodland to the north and to the east (boundary with A465) and hedgerow to the west.

Species rich marshy grassland was the dominant habitat within the survey area (see Target Note 1). The northern field appeared to have not been managed for many years and was long and overgrown in patches with small patches of willow *Salix* sp. scrub and rare young oak *Quercus* sp. and ash *Fraxinus excelsior* saplings in places. Ground cover species comprised: abundant purple moor-grass *Molinia caerulea* with stands of sharp-flowered rush *Juncus acutiflorus*; frequent herbs such as sneezewort *Achillea ptarmica,* ribwort plantain *Plantago lanceolata* and devil's-bit scabious*;* occasional meadowsweet *Filipendula ulmaria,* ragged-robin *Lychnis flos-cuculi,* common knapweed *Centaurea nigra,* greater bird's-foot-trefoil *Lotus pedunculatus,* lesser spearwort *Ranunculus flammula,* common sorrel *Rumex acetosa* and wild angelica *Angelica sylvestris;* and rare marsh ragwort *Senecio aquaticus* and willowherb spp *Epilobium* sp*.* This habitat had affinities with both *M24 Molinia caerulea – Cirsium dissectum fen-meadow* and *M25 Molinia caerulea – Potentilla erecta mire* National Vegetation Classification (NVC) communities.

The western half of the southern field appeared to have had received management over the years in the form of annual cuts and was mapped as species rich damp semi improved neutral grassland. Species included frequent soft-rush *Juncus effuses*, Yorkshire-fog *Holcus lanatus,* red fescue *Festuca rubra,* devil's-bit scabious and common knapweed with occasional crested dog's-tail *Cynosurus cristatus*, sweet vernal-*grass Anthoxanthum odoratum*, creeping bent *Agrostis stolonifera*, cocks-foot *Dactylis glomerata* sneezewort, ribwort plantain, creeping buttercup *Ranunculus repens* and rare meadow thistle *Cirsium dissectum* (see Target Note 2). This habitat had affinities with improved *MG5 Cynosurus cristatus - Centaurea nigra* and *MG6 Lolium perenne - Cynosurus cristatus grassland* NVC communities.

The scrub that separated the two northern fields includes species such as abundant willow species and bramble *Rubus fruticosus agg*. with occasional hawthorn *Crataegus monogyna* and rare dog-rose *Rosa canina* (See Target Note 4). The surrounding woodland included species such as abundant hazel *Corylus avellana*, oak *Quercus* sp. and ash *Fraxinus excelsior* with frequent hawthorn and blackthorn *Prunus spinose* and occasional willow sp*.* (see Target Note 3*).*

The area to the south of the survey area compromised amenity grassland and hard standing which formed part of a regularly mown lawn and manicured garden borders.

A full species list can be found in the Target Notes in Appendix A.

### 3.2 Marsh fritillary habitat mapping

The marsh fritillary habitat mapping is shown in Figure 2. The breakdown of habitat types identified is as follows:

- 0.24 ha (21%) good condition habitat;
- 0.44 ha (39%) suitable under-grazed habitat;
- 0.03 ha (3%) suitable over-grazed habitat;
- 0.02 ha (2%) suitable sparse habitat;
- 0.05 ha (4%) potential rank habitat; and
- 0.35 ha (31%) not suitable habitat.

### 3.3 Marsh Fritillary larval web counts

No marsh fritillary larval webs we recorded on the day of survey.

## 4. Conclusions

### 4.1 Habitat

Habitats recorded in the survey area included species rich marshy grassland and species rich semi improved neutral grassland. These habitats are common in the surrounding areas and were recorded frequently during the wider phase 1 habitat surveys carried out for the proposed scheme.

### 4.2 Marsh fritillary

During a survey carried out by Butterfly Conservation in May / June 2017, adult marsh fritillary butterflies were recorded. However, no marsh fritillary larval webs were recorded during the surveys carried out by Jacobs in September 2017.

The survey area is small and is not located within the 2 km Blaen Cynon SAC metapopulation area. It is isolated with limited connectivity to known marsh fritillary strongholds due to its location in a wider landscape of surrounding woodland. Considering the widely accepted sedentary nature and height adverse flight patterns of the marsh fritillary, these fields could be considered to support a remnant part of the wider metapopulation with limited future dispersal options. This would have contributed to the lack of evidence of successful breeding (i.e. larval webs) during the survey.

# Appendix 14B – Assessment Approach

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 14B – Assessment Approach.**

## 14B.1 Study Area

### 14B.1.1 Noise

The study and calculation areas for the noise assessment were defined in accordance with HD 213/11 (Highways Agency, 2011). Firstly, the study area is defined as a 1 km boundary around the start and end points of the physical works associated with the road project, and any improved or bypassed routes as part of the proposed scheme. The calculation area is then defined as all residential dwellings and other noise sensitive receptors within 600 m of the proposed scheme and for those roads (within 1 km of the proposed scheme) on the existing road network that are predicted to result in noise changes of 1 dB in the opening year or 3 dB in the design year.

HD 213/11 (Highways Agency, 2011) requires consideration beyond the "calculation area", to take into account the likely noise impacts on the wider road network (considered in terms of change in basic noise level (BNL)). This is required for such roads where there is a 1 dB increase or decrease in noise in the baseline year and / or a 3 dB increase or decrease in the future assessment year in comparison with the baseline year.

### 14B.1.2 Vibration

The study area for the vibration assessment was defined as within 40 m of all roads where noise level predictions were undertaken.

## 14B.2 Noise Assessment

### 14B.2.1 DMRB Noise Assessment

The assessment of noise levels at noise sensitive receptors has followed the "Detailed Assessment" methodology outlined in HD 213/11 (Highways Agency, 2011). Noise levels have been calculated at all residential dwellings within the Calculation Area (see Figure 14.1). Noise levels at dwellings have generally been calculated at first floor level; unless the property is known to only have one floor. For single storey dwelling, and for other sensitive receptors, such as churches, schools, medical facilities and outdoor areas, predictions have been undertaken at 1.5 m above ground level.

Consideration has also been given to likely noise impacts on the wider road network, outside the calculation area. The basic noise level (BNL) changes have been predicted for the affected routes outside the calculation area where there is a 1 dB increase or decrease in noise in the baseline year and / or a 3 dB increase or decrease in the future assessment year in comparison with the baseline year.

The future assessment year is defined as the year within the first 15 years of opening of the proposed scheme where traffic flows are greatest. The future assessment year is therefore usually 15 years after opening, which in this assessment is 2037.

This assessment considers noise level changes at dwellings and other sensitive receptors according to their baseline façade noise levels (reception point 1 metre in front of the building facade). The following comparisons are made:

- Do Minimum scenario in baseline year (2022) against Do Minimum in the future assessment year (2037);
- Do Minimum scenario in the baseline year (2022) against Do Something scenario in the baseline year (2022); and,
- Do Minimum condition in baseline year (2022) against Do Something in the future assessment year (2037).

### 14B.2.2 Noise level predictions

Noise level predictions have been undertaken using the CadnaA noise modelling package, which incorporates the methodology contained in CRTN (Department for Transport and the Welsh Office, 1988). This document is a technical memorandum providing the definitive method of predicting road traffic noise in the United Kingdom. Noise level predictions take account of the following variables:

- typical weekday volumes of traffic during the eighteen hour period from 6 am to midnight (18-hour AAWT flows) – day time assessment;
- typical weekday volumes of traffic during the eight hour period from 11 pm to 7 am – night-time assessment;
- percentage of Heavy Vehicles (vehicles of unladen weight > 3.5 tonnes);
- traffic speeds (banded speed based on Interim Advice Note 185/15);
- road gradient;
- local topography;
- nature of the ground cover between the road and the receptor;
- shielding effects of any intervening structures, including allowances for limited angles of view from the road and any reflection effects from relevant surfaces; and,
- road surfacing type.

HD 213/11 (Highways Agency, 2011) provides updated guidance on the use of CRTN (Department for Transport and the Welsh Office, 1988). This includes guidance on predicting noise from dual carriageways; noise reduction corrections to be applied for low noise surfacing systems; and the prediction of road traffic noise levels to 600 m from a road traffic source (CRTN provides for a prediction distance of 300 m).

For daytime noise levels at dwellings, community facilities and other noise sensitive properties, façade noise levels are predicted whereas night-time noise levels are free-field (in the open, without any nearby noise-reflecting surfaces).

HD 213/11 provides specific guidance in relation to the noise level correction that should be applied when using Low Noise Road Surfaces (LNRS) for existing and new carriageways.

- For existing carriageways, unless alternative RSI measurements for the surface are available, a -2.5 dB surface correction should be used for an existing low noise surface in the baseline year.
- For the future assessment year, a -3.5 dB correction should be applied for a low noise road surface that is expected to be in place on an existing road.

It also states that, “where new carriageways are to be constructed and a thin surfacing system [low noise surfacing] used, or where an existing surface is to be replaced with a thin surfacing system, a -3.5 dB correction should be assumed for the thin surface system [equivalent to a Road Surface Influence (RSI) of -5 dB] unless any information is available regarding the specific surface to be installed. This advice applies where the mean traffic speed is >=75 kph (47 mph). Where the mean speed is <75 kph (47 mph), a -1 dB correction should be applied to a new low-noise surface.”

The assumptions made for this assessment are in line with the guidance provided in HD 213/11 (Highways Agency, 2011).

The following road surface types have been assumed:

DM 2022 –HRA for all roads within the calculation area, with the exception of the following lengths of the A465, which have existing low noise surfaces, according to the SWTRA Pavement Management System. In accordance with HD 213/11, a LNRS correction of -2.5 dB is applied to these sections of carriageway.

- Chainages 8350 to 10700

DM 2037 – The A465 mainline and slip roads will be resurfaced with LNRS before the future assessment year, even if the proposed scheme doesn't go ahead. Therefore, a -3.5 dB correction is applied for the entire A465 mainline and slip roads, and standard HRA for the side roads.

DS 2022 – The proposed scheme mainline and slip roads would be laid using LNRS and HRA. Therefore, a LNRS correction of -3.5 dB is applied for the following A465 mainline and slip roads, and standard HRA for the side roads.

- Chainages 1500 to 5500
- Chainages 8100 to 17700

DS 2037 – The road surfacing assumptions used in DS 2037 follow those in DS 2022.

It should be noted that LNRS corrections of -2.5 dB and -3.5 dB have only been applied where the traffic speed is greater than 75 kph (47 mph), in line with the guidance contained within HD 213/11 (Highways Agency, 2011).

Where the traffic assessment modelling has predicted 18-hr AAWT traffic flows less than 1000, the lower threshold for the CRTN calculation method, traffic flows have generally been set to 0 within the noise model scenarios affected. However, this approach can lead to artificial noise changes on links where traffic flows are less than 1000 in some scenarios but greater than 1000 in others. On such links, traffic flows of less than 1000 have therefore been set at 1000 to minimise the potential for artificial noise changes.

In line with HD 213/11 (Highways Agency, 2011), a minimum traffic speed of 20 kph (12 mph) has been used in the noise model, where the traffic model predictions provide speeds less than this.

It is considered that all data inputs for this assessment are of an adequate level to support a 'Detailed' level of assessment as defined in HD 213/11 (Highways Agency, 2011).

**14B.2.3 Night time noise**

An assessment of night-time noise levels has been undertaken in accordance with HD 213/11. Therefore, consideration is given to those receptors that are predicted to experience a noise level change in the long-term and which are exposed to an Lnight,outside noise level of 55 dB or greater in any scenario. Method 3 within TRL report 'Converting the UK traffic noise index LA10,18h to EU noise indices for noise mapping' has been used to determine the night-time levels (Lnight,outside).

For the night-time assessment, the following comparisons are made:

Do Minimum scenario in baseline year (2022) against Do Minimum in the future assessment year (2037); and,

Do Minimum condition in baseline year (2022) against Do Something in the future assessment year (2037).

**14B.2.4 Noise nuisance**

HD 213/11 (Highways Agency, 2011) defines the level of noise 'nuisance' by reference to the percentage of people in the affected population that are likely to be 'bothered very much or quite a lot' by traffic noise. Gradual increases in noise are expected to produce a gradual and proportionate increase in the nuisance level (i.e. the percentage of the population that is bothered). However, sudden increases in the noise level are expected to result in an initial large increase in the nuisance level. This new level of nuisance appears to persist for several years at least but, in the longer term, nuisance levels tend back towards those expected for a gradual increase in noise.

In this assessment, noise nuisance predictions have been based on the highest nuisance levels expected during the first 15 years after opening for the Do Minimum and Do Something scenario and compared to the nuisance levels of the Do Minimum baseline year (2022). In accordance with the predictive technique presented in HD 213/11 (Highways Agency, 2011), an assessment of noise nuisance for all properties situated within the calculation area has been undertaken.

## 14B.3 Vibration

HD 213/11 (Highways Agency, 2011) advises that should the level of vibration at a receptor be predicted to rise to above a level of 0.3 mm/s, or an existing level above 0.3 mm/s is predicted to increase, then this should be classed as an adverse impact from vibration.

HD 213/11 (Highways Agency, 2011) paragraph A5.26 states, "Significant ground-borne vibrations may be generated by irregularities in the road surface. Such vibrations are unlikely to be important when considering disturbance from new roads and the assessment will only be necessary in exceptional circumstances." Further to this, Figure 3 from Transport and Road Research Laboratory (TRRL) Report No RR53 – Ground Vibration Caused by Civil Engineering Works provides a summary of measurements taken by the TRRL which indicates the relative effects of various construction related sources. This figure indicates that, for a heavy lorry on a poor road surface at 8 m, a PPV of 0.1 mm/s is expected.

### 14B.3.1 Ground-borne vibration

HD 213/11 (Highways Agency, 2011) provides guidance on ground-borne vibration from highway schemes. It states "If ground-borne vibration on existing routes is considered to be a potential problem, calculations or measurements of vibration at the foundations of typical buildings considered to be at high risk may be taken in order to establish whether increasing vibration levels would be likely to exceed the threshold values".

The document also advises that methods are available to predict ground-borne vibration from roads; however, it does state that this requires detailed knowledge of the ground type, which is unlikely to be readily available. The methodology also requires detailed knowledge of deviations in the road surface (holes, cracks, undulations, etc.). For these reasons, this assessment provides a qualitative assessment on the likelihood of perceptible traffic induced ground-borne vibration.

### 14B.3.2 Vibration nuisance

Where properties are within 40 m of the carriageway, HD 213/11 (Highways Agency, 2011) recommends that, for a given level of noise exposure, the percentage of those 'bothered' by airborne vibration is 10% lower than the corresponding figure for noise nuisance. Where noise levels are below 58 dB LA10,18h, it should be assumed that residents would not be 'bothered' by airborne vibration. Consideration has been given to changes in airborne vibration nuisance at all dwellings within 40 m of roads where noise level predictions have been undertaken.

## 14B.4 Assessment of the Significance of Effects

### 14B.4.1 Construction noise

BS 5228-1:2009 +A1:2014 includes example thresholds of 'significant effects'. These thresholds can be based on the 'ABC' method, which takes into account the existing ambient noise levels in the area, along with predicted construction noise levels. It should be noted that the thresholds in BS 5228-1:2009 +A1:2014 are examples and therefore there is scope for them to be adapted, if deemed necessary to local circumstances.

Example thresholds of significant effects (or potential disturbance), using the ABC methodology as set out in Annex E of BS5228-1:2009 +A1:2014, are detailed in Table 14B.1.

**Table 14B.1: Construction Noise Thresholds**

| Assessment category and threshold value period ($L_{Aeq}$) | Threshold Value, in decibels (dB) | | |
|---|---|---|---|
| | Category A[A)] | Category B[B)] | Category C[C)] |
| Night-time (2300 – 0700) | 45 | 50 | 55 |
| Evenings and weekends [D)] | 55 | 60 | 65 |

| Assessment category and threshold value period ($L_{Aeq}$) | Threshold Value, in decibels (dB) | | |
|---|---|---|---|
| | Category A[A)] | Category B[B)] | Category C[C)] |
| Daytime (0700 – 1900) and Saturdays (0700 – 1300) | 65 | 70 | 75 |
| **NOTE 1**: A potential significant effect is indicated if the $L_{Aeq}$ noise level, from the site, exceeds the threshold level for the category appropriate to the ambient noise level.<br>**NOTE 2**: If the ambient noise level exceeds the Category C threshold values given in the table (i.e. if the ambient noise level is higher than the above values), then a potential significant effect is indicated if the total $L_{Aeq}$ noise level for the period increases by more than 3dB due to site noise.<br>**NOTE 3**: Applies to residential receptors only<br>Category A: Threshold values to use when ambient noise levels (when rounded to the nearest 5dB) are less than these values<br>Category B: Threshold values to use when ambient noise levels (when rounded to the nearest 5dB) are the same as Category A values<br>Category C: Threshold values to use when ambient noise levels (when rounded to the nearest 5dB) are higher than Category A values<br>1900 – 2300 weekdays, 1300 – 2300 Saturdays and 0700 – 2300 Sundays | | | |

The numbers of dwellings and other sensitive receptors (OSRs) where construction noise levels are expected to be close to or exceed the relevant threshold value from BS 5228-1:2009 + A1:2014 (BSI, 2014a) have been estimated. The significance of the impact associated with these exceedances has been classified according to the following categories:

- potential minor impacts are judged to have occurred where the construction noise levels are within a range of 0 - 5 dB below the relevant threshold;
- potential moderate impacts are judged to have occurred where the construction noise levels are between 0 - 5 dB above the relevant threshold; and
- potential major impacts are judged to have occurred where the construction noise levels are greater than 5 dB above the relevant threshold.

In determining whether a significant effect would occur, guidance within BS 5228-1:2009 + A1:2014 (BSI, 2014a) advises that consideration should be given to a number of additional factors including the number of receptors affected, the duration of the works and the character of the noise. At this stage, there is insufficient information available to enable consideration of some of these additional factors and the assessment presented should be considered preliminary in nature.

### 14B.4.2 Construction vibration

Vibration is a low frequency disturbance producing physical movement in buildings or to their occupants. Ground-borne vibration is usually measured in terms of peak particle velocity (ppv), which is measured in terms of movement in mm/s. BS 5228-2:2009+A1:2014 (BSI, 2014) contains guidance on vibration levels in structures from construction works. It provides a prediction methodology for mechanised construction works, such as compaction and tunnelling works, and piling works. The Standard also presents guidance for the control of vibration from construction works.

BS 5228-2:2009+A1:2014 (BSI, 2014) provides guidance on the human response to vibration. The Standard provides guidance for predicting human response to vibration in buildings. For construction works, the guidance contained in Table 14B.2 is provided:

**Table 14B.2: Guidance on the Human Response to Vibration Levels from BS5228-2:2009+A1:2014+A1:2014**

| Vibration level (ppv) | Effect |
|---|---|
| 0.14 mm/s | Vibration might just be perceptible in the most sensitive situations for most vibration frequencies associated with construction. At lower frequencies, people are less sensitive to vibration |
| 0.3 mm/s | Vibration might just be perceptible in residential environments |
| 1.0 mm/s | It is likely that vibration of this level in residential environments would cause complaint, but can be tolerated if prior warning and explanation has been given to residents |
| 10.0 mm/s | Vibration is likely to be intolerable for any more than very brief exposure to this level |

For building structure response, BS 5228-2:2009+A1:2014 (BSI, 2014) reproduces the advice given in BS 7385-2:1993 (BSI, 1993), which gives guidance on vibration levels which could potentially result in building damage. The response of a building to ground-borne vibration is affected by the type of foundation, underlying ground conditions, the building construction and the state of repair of the building. Table 14 23 reproduces the guidance detailed in BS 5228-2:2009+A1:2014 (BSI, 2014) on building classification and guide values for cosmetic building damage.

Minor damage is possible at vibration magnitudes which are greater than twice those given in Table 14B.3, with major damage at values greater than four times the values in the table. BS 7385-2:1993 (BSI, 1993) also notes that the probability of cosmetic damage tends towards zero at 12.5 mm/s peak component particle velocity.

**Table 14B.3: Guidance on the Effects of Vibration Levels on Building Structures from BS5228-2:2009+A1:2014+A1:2014**

# Appendix 14C – Noise Monitoring Results

**The sections contained within this document are complete replacements of the corresponding sections published in the July 2017 published Environmental Statement Volume 2 Appendix 14C. There are no further changes to Appendix 14C as published in July 2017.**

## 14C.2 Comparison Between Measured and Predicted Noise Levels

Table 14C.1 provides a comparison of the $L_{A10,18hour}$ and $L_{night}$ noise levels measured in 2016 against those predicted in this assessment for the Do Minimum scenario in the opening year (2022). It should be noted that traffic would increase slightly between 2016 and 2022, and could result in some small changes in noise levels. As noted in HD 213/11 there is likely to be some variability and uncertainty associated with comparing environmental noise measurements with predicted levels. Both measured and predicted are shown as façade noise levels.

The measured and predicted noise levels are considered to show some notable variations. This is not unusual when taking into account the variability and uncertainty associated with environmental noise measurements.

**Table 14C.1 : Comparison between measured and predicted noise levels**

| Location ID | Location | Measured Noise Level dB $L_{A10,18hour}$ | Predicted Noise Level dB $L_{A10,18hour}$ | Measured Noise Level dB $L_{night}$ | Predicted Noise Level dB $L_{night}$ |
|---|---|---|---|---|---|
| LT1 | 12 Penyfan View | 62.8 | 65.8 | 55.0 | 55.5 |
| LT2 | 12 Eighth Avenue | 63.0 | 61.9 | 55.4 | 51.9 |
| LT3 | 84 The Hafod Pant | 60.9 | 55.6 | 52.8 | 46.2 |
| LT4 | 2 Trewaun | 66.8 | 70.7 | 55.6 | 59.8 |
| LT5 | 1 Oakland Close | 64.5 | 70.7 | 55.3 | 59.8 |
| LT6 | Tawel Fan | 53.4 | 51.7 | 50.6 | 42.7 |
| LT7 | Hafan Dawel | 57.7 | 63.0 | 50.6 | 52.9 |
| ST1 | Pearce's Court | 66.4 | 69.2 | - | - |
| ST2 | Vaynor Road | 69.8 | 65.5 | - | - |
| ST3 | Hornbeam Close | 72.7 | 69.9 | - | - |
| ST4 | Houlson Street | 77.8 | 74.6 | - | - |

The full measured data, location records, photographs, equipment personnel, calibration records, meteorological records and subjective impressions of the noise environment are presented in the measurement sheets given in the July 2017 published Environmental Statement (ES) Volume 2 Appendix14C.

Page left intentionally blank.

# Appendix 14F – Noise Monitoring Results

**This Appendix is a complete replacement of the July 2017 published Environmental Statement Volume 2 Appendix 14F – Noise Monitoring Results.**

See following page.

Page left intentionally blank.
