*Article 4.1. Member States are required to classify the most suitable areas as Special Protection Areas (SPAs) for the conservation of these species (Annex 1).

*Article 4.2. Member States will take similar measures for regularly occurring migratory species not listed in Annex I, bearing in mind their breeding, moulting and wintering areas and staging posts along their migration routes. Particular attention shall be given to the protection of wetlands.

** Habitat type is based on the dominant habitats within the SPA(s) for which the species is designated. For example, while in general Little tern may be classified as a marine species, within the Welsh SPA series it is designated only within the Dee Estuary, therefore it is recorded as an 'Estuarine' species in the table above.

** 'Coastal' is defined as predominantly terrestrial coastal habitats such as sea cliffs and shingle banks, and includes small islands.
